HGH makes you look and feel 20 YEARS YOUNGER!

→ Experts in the New England Journal of Medicine report that human growth hormone therapy **makes you look and feel 20 YEARS YOUNGER!**

"I have been using HGH Revolution for about a month. I am sleeping better than I have in ages and have lost inches off my waist. I have been feeling much more energetic that I have started an exercise program after years of neglect."

Kimberly K., Houston, TX [More](#)

LOSE WEIGHT WHILE YOU SLEEP without DIETING or EXERCISE.

100% SATISFACTION GUARANTEED!

Experience up to an **82% IMPROVEMENT** in body fat loss while erasing **10 YEARS** in **10 WEEKS!**

HGH - Fountain of Youth

Human Growth Hormone is a naturally occurring substance in the human body which is secreted by the pituitary, the master gland of the body located in the endocrine system.

Growth Hormone is important for a number of reasons, in older individuals, it can slow down and in many cases even reverse the aging process. Aging is now considered a disease and not just a normal occurrence which goes unchecked. I attended the Anti-Aging Conference in December with over 1,000 other physicians from around the world. Most doctors who attended agreed that Human Growth Hormone was one of the most exciting advancements in reversing the disease process since DHEA.", said Dr. Dorman.

Traditionally, it has been used in Europe and the United States for approximately 15 years with very gratifying results. It has previously been available by injection only and since injections can cost between \$4,000 and \$20,000 a year, only the wealthy have been able to afford this treatment.

The World's most advanced oral form of HGH Releaser is now available for a fraction of the current cost.

What is Human Growth Hormone?

Human Growth Hormone (HGH) is produced in the pituitary gland of humans, and the hormone is secreted throughout a person's lifetime. It promotes growth in children and plays an important role in adult metabolism. It was first isolated in 1956 and its structure was identified in 1972. Until the mid-1980, the only source of HGH was from pituitary glands collected post mortem. Today HGH is available in larger quantities through the technique of genetic engineering.

Why is there so much media focus on Growth Hormone?

To put it simply, there is no other substance known to man that has such far reaching ability to prevent and reverse the aging process.

Dr. Daniel Rudman, an endocrinologist, pioneered the original peer reviewed research on GH in humans. The study, published in the new England Journal of Medicine, represents the biggest breakthrough in anti-aging research.

Until recently, growth hormone therapy has only been available in the form of injections that are prohibitively expensive and difficult to use. Now there are natural substances (secretagogues) which have been documented to increase growth hormone naturally and may exceed the effectiveness of injection therapy. These natural secretagogues provide nutritional support for the release of growth hormone from its sequestered state in the pituitary gland. As we age the pituitary gland releases less growth hormone. Natural secretagogues have been documented to help support the secretion of growth hormone as we age.

Studies published in the New England Journal of Medicine and other journals show that Human Growth Hormone (hGH) may reverse human biological aging by:

- Restoring muscle mass.
- Decreasing body fat.
- Thickening the skin, reducing wrinkles.
- Restoring lost hair.
- Restoring hair color.
- Increasing energy.
- Increasing sexual function.
- Improving cholesterol profile.
- Restoring size of liver, pancreas, heart and other organs that shrink with age.
- Improving vision.
- Improving memory.
- Elevating mood and improving sleep.
- Normalizing blood pressure.
- Increasing cardiac output and stamina.
- Improving immune function.

GrowthMed is designed to provide total hormone support including Growth Hormones, DHEA, Testosterone, Estrone, Estradiol and Estriol

Growth Hormone and Aging

Growth hormone declines with age in every animal species that have been tested to date. In humans, the amount of growth hormone after the age of 21 to 31 falls about 14% per decade, so that the total 24-hour growth hormone production rate is reduced in half by the age of 60. In numerical values, we produce on a daily basis about 500 micrograms at 20 years of age , 200 micrograms at 40 years , and 25 micrograms at 80 years old.

The easiest way to measure growth hormone in the body is by measuring plasma IGF-1 levels. Under 350 IU is considered evidence of deficiency. Between the ages of 20 to 40 years, less than 5% of healthy men have less than 350 IU per liter of IGF-1 levels. But after 60, 30% of apparently healthy men have this low amount. And after age 65, about half the population is partially or wholly deficient in growth hormone.

Total daily hGH secretion declines in humans with increasing age. "Elderly" levels are reached by age 35-40.

Why is Growth Hormone so Important?

Human Growth Hormone, secreted by the pituitary gland, stimulates human growth. It controls the height, the shape and the development of healthy organs. At the age of 25 - the peak time for growth hormone, the total secretion amount is 600mg. The secretion amount will be reduced over the years and can go down to 15% at the age of 60 - 70 years. For people who do not have a balanced diet, the 15% secretion can happen when they are only 40 -50 years old. These people will have older and worn looks than the other people at the same ages.

Human Growth Hormone (HGH) is one of many endocrine hormones, like estrogen, progesterone, testosterone, melatonin and DHEA, that decline with age (See graph). While many of these hormones can be replaced to deter some of the effects of aging, HGH reaches far beyond the scope of any one of these hormones to not only prevent biological aging, but to significantly reverse a broad range of the signs and symptoms associated with aging. When Growth hormone decreases, the aging process increases.

If we can revitalize the function of the pituitary gland to deliver sufficient growth hormone, even though the growth hormone cannot be fully recovered to the level at age 25, we will still be able to have sufficient volume to nourish all organs and rebuild them. Therefore, it can improve the health condition of any patients who have stomach and lung diseases or who suffer from high cholesterol and high blood sugar. In addition, the growth hormone can nourish female ovaries and male testis to increase sexual potency. Any extra body fat in the abdomen and legs can be eliminated due to the increase of growth hormone. Skin texture and elasticity will also be improved at the same time.

Short young males and females may stimulate the steady growth of their bones by taking supplementary growth hormone. After 6 months of intake, their heights may grow up. Meanwhile, the growth hormone will enhance muscle development to make flat chest curved and nicely shaped. But bear in mind that growth hormone is circulated throughout the body by the blood every night between 1 and 4 A.M. If one stays up late or misses the aforementioned sleep period, he or she will not be able to benefit from the naturally secreted growth hormone. That is to say the damaged body functions cannot be repaired unless an external source of HGH is supplied.

- Increase Muscle Mass
- Restore vital organs that shrink with age
- Improve Sexual Performance
- Increase Energy Levels
- Improve Cholesterol Level
- Improve Immune Function
- Normalize Blood Pressure
- Strengthen Nails
- Helps heal wounds
- Strengthens immune systems
- Improves cardiovascular and respiratory functions
- Decrease Body Fat
- Reduce Wrinkles & Skin Spots
- Hair Restoration & Hair Color
- Improve Memory
- Elevate mood and improve sleep
- Increase cardiac output and stamina
- Improve vision
- Enhances effects of exercise
- Increases bone density

- Lowers blood pressure

The History of Human Growth Hormone (HGH)

Scientists have known the existence of Human Growth Hormone as early as the 1920s. It was not until 1958 before they began to apply HGH on children that suffer from dwarfism to help them grow normally. The effects were very obvious. The theory behind the use of HGH in those days was that the pituitary gland, which secretes HGH, was either defective or not functioning at all in those children with dwarfism. The main source of HGH for treatment at that time was extracted from the pituitary glands of dead people in Africa. It often took thousands of brains of the dead to produce just a few drops of HGH! Scientists were, therefore, forced to research alternatives such as synthetic HGH. In 1985, Genentech succeeded in producing large quantities of HGH through microbiological replication by inserting human DNA into microorganisms. Normal HGH has 191 amino acids, whereas Genentech's HGH had only 190. In 1986, Eli Lilly was able to produce HGH with 191 amino acids by using bio-engineering of the genes.

In 1985, Dr. Daniel Rudman, a Wisconsin internal medicine scholar, first published in the Journal of American Geriatrics Society a brand new theory about aging based on his many years of extensive clinical experiments and research. He indicated clearly in the article that human aging is a result of HGH deficiency, and is not the commonly accepted view of "inevitable natural phenomenon." He further concluded that by stimulating the pituitary gland with HGH, the gland could be made to recover its function to secrete HGH again. This discovery not only stops the aging process but also turns back the biological clock to its adolescent stage.

In July 1990, Dr. Daniel Rudman published another article in the New England Journal of Medicine that shocked the entire medical fields. This article became a milestone in anti-aging treatment with the clinical trials of HGH. He selected 12 males, aged from 61 to 81 for treatment. After 6 months' use of HGH, their fat was reduced by 14.4%; skin thickness increased 7.11%; bone density increased 1.6%; liver improved 19% and spleen improved 17%. Dr. Rudman concluded that these 12 old men had become younger by 20 years both physically and psychologically.

Encouraged by Dr. Rudman's HGH theory, the National Institute on Aging began in 1992 to carry out nine clinical experiments that took 5 years to complete. The results, unprecedented and far-reaching in influence, proved once again that Dr. Rudman's theory was correct.

In 1996 Dr. Rudman had over 800 HGH patients, including movie stars, corporate executives, other renowned doctors, specialists and scholars. In his medical reports, he indicated that among thousands of patients, there was not even one single case of failure.

Within the past ten years, there were more than 30,000 case reports, the results were very encouraging. In 1996, FDA finally approved the usage of HGH in the treatment of both children and adults for suffering from growth hormone deficiency. It is now recognized in the medical fields that HGH is the major hormone among all hormones. It guides and promotes the release and secretion of other hormones.

To make HGH popular and easier to use, an oral delivery system has been developed. It takes advantage of the short distance between the brain and the mouth so that HGH can pass through the mucous membrane under the tongue into the blood vessels within seconds, then it goes directly into the brain. It is quickly absorbed and works to stimulate and reactivate the functions of the pituitary gland to secrete HGH and other rejuvenating hormones. Due to its low but proper dosage, there are no side effects. It is also affordable

based on its reasonable price. With the availability of this product, thousands of middle-aged and senior people will not suffer from aging again. They can live healthily and happily for a long time and never worry about getting old!

Why We Need HGh

Human Growth Hormone and Women

In general, menopause could start as early as after 30 years old or as late as over 60 years old. The regular function of ovaries will gradually disappear. The supply of female hormone will also decrease to the lowest point. The physical change occurs to most female during age 46 to 56. The average age for menopause is 51. The lower level of hormone will result in the changes of the human body. The most apparent symptoms are irregular cycle or lesser volume during the menstruation, or it comes to a complete stop. The menopause is confirmed after one full year of the discontinuation of female menstruation. It is always the case that every woman will face the menopause before 70 years old.

There are several menopause symptoms that may occur during each stage even though they may not appear in each individual female:

A. Initial Stage:

1. Hot flash and night sweat: 75% female will have these symptoms. When it occurs, you will feel faster heart beat and night sweat as if a torch were put in front of you. It often occurs during the sleep time and will interrupt the entire sleep.
2. The maladjustment of self-restraint nerve system will also result in insomnia and emotional reactions such as depression, irritation, anxiety and constant worry. In the meantime, the feeling of disharmony of sexual life, emotional loneliness and unhappiness to face the public will also appear.

B. Later/Final Stage:

1. Due to the reduced secretion of female hormone over the time, skin texture tends to be inelastic and dry. Wrinkles will show up especially on the face.

2. For the same reason, the thinner and atrophic epidermis tissues of the urethra and vagina may easily cause the inflammation of urethra and vagina. The reduced secretion of Hormone will also keep the vagina dry and may increase the pain, resistance and fear for sexual intimacy. The frequent urination may also occur. However, these are not the fatal diseases. The following diseases we called invisible killers are usually neglected by most females.

Osteoporosis:

Imagine our body frame as a house. When the density of the bone is getting lower, it is like a house that only has sands without sufficient concrete. Once there is any exterior injury, it is very easy to cause bone fracture. Due to the lack of hormone, our entire body will not have sufficient calcium. Usually when the bone fracture occurs we realize the senior patient may have suffered from Osteoporosis for a long time. The solution is to increase the intake of HGH.

Cardiovascular Disease:

Based on the statistics, the possibility of having cardiovascular diseases greatly increased after menopause. The bad (low density) cholesterol will grow while the good (high density) cholesterol will diminish. This will greatly increase the occurrence of cardiovascular diseases. By taking HGH, the situation will be reversed.

Alzheimer Disease: As revealed by the medical report, taking HGH will greatly reduce the potentiality of having Alzheimer disease. The reasons are that HGH can rebuild our nerve systems and fight against any aging.

Human Growth Hormone and Men

If middle-aged males start showing symptoms of irritability or falling asleep while watching TV, it is a sign of bodily hormonal changes. In the past, very few people are aware of this link or they just do not want to admit it. However, modern medical doctors are telling us not to doubt any more that hormonal change in middle-aged males is a fact.

A decrease in male hormone secretion can cause symptoms of irritability, depression, moodiness and loss of sexual interests. Physically, patients may feel tired easily, lacking energy, and falling asleep while watching TV. Usually, they do not notice these symptoms themselves. It is their spouses who become alerted. Besides a decline in physical strengths, patients will also experience bone fragility, joint pain, sore muscles and heart problems.

Hormonal changes are not as universally recognized in middle-aged males as in females, mainly because the symptoms in males do not occur suddenly around age 49 as in many females. The decrease in hormone production in males takes place gradually over several years. Sometimes it can happen to males as young as 35 years old.

HGH-R is the fountain of youth that helps restore health and vitality. It can help males rebuild muscles, improve sexual potency and interests and improve the immune systems. It can also strengthen cardiovascular and pulmonary functions and heal the damage caused by stress. In the meantime, it can stabilize one's emotion, improve memory and thinking process, increase skin elasticity, eliminate wrinkles, reshape body, strengthen kidney functions and increase bone density. Growth Hormone promotes liver's secretion of growth factor IGF-1 and revitalizes cells and organs to return to their original conditions. Growth Hormone is the ultimate hormone secreted by the pituitary gland. It is closely associated

with the production of male hormones.

Doctors and Research

Reverse 10 to 20 years of aging

Daniel Rudman, M.D., New England Journal of Medicine: "The effects of six months of human growth hormone on lean body mass and adipose-tissue were equivalent in magnitude to the changes incurred during 10-20 years of aging."

The New England Journal of Medicine published the clinical findings of Daniel Rudman, MD, regarding his hgh human growth hormone research on the anti-aging effects of hgh. His findings were astonishing.

Dr. Rudman studied patients age 61 to 81 at the Medical College of Wisconsin-Milwaukee. After six months, Dr. Rudman observed a reversal of the aging process from 10 to 20 years in the patients who received hgh injections. But in the control group (those who didn't receive hgh), the normal aging process continued.

Other hgh human growth hormone research clinical studies performed over the past 30 years have demonstrated that hgh can allow users to lose fat, build muscle mass, improve sexual performance, remove wrinkles, eliminate cellulite, and increase immune function when taken through intra-muscular injections. Hgh is the master hormone which is secreted by the pituitary gland and is responsible for directly and indirectly balancing the body's critical hormones.

A recent outcome based hgh human growth hormone research study of the oral spray we recommend, revealed that 75% of subjects experienced a 41% average increase in IGF-1 levels (an indicator of growth hormone levels). In addition, there was lowered cholesterol in an average of 11% in 90% of the cases, and 80% of the subjects experienced an average 29% reduction in tryglicerides (fat), reflecting better overall health.

- 14.4% loss of body fat on average after 6 months, without dieting or exercise.

- 8.8% increase in lean muscle mass on average without exercise.
- Re-growth of heart, liver, spleen, kidneys, and other organs that shrink with age.
- Greater Cardiac Output
- Superior Immune Function
- Increased Exercise Performance
- Better Kidney Function
- Lowered Blood Pressure
- Improved Cholesterol Profile (Higher HDL and Lower LDL)
- Stronger Bones
- More Rapid Healing
- Younger, Tighter, Thicker Skin
- Mood Elevation
- Increased Memory Retention

V. A. Medical Center and Department of Medicine, Stanford University Medical Center:

Concludes: "It is possible that chronic physiologic GH and/or IGF-I replacement therapy might reverse (or prevent) some of these 'inevitable' sequelae of aging". (Study of GH therapy in the elderly - March 1992.)

LOOK AT THESE AMAZING TEST RESULTS!

Results from a study: [Effects of Growth Hormone administration on 202 patients ages 39-74]

L. Casserry M.D., Ph.D. and Edmund Chein, M.D., Medical College of Wisconsin and Palm Springs Life Extension Institute.

Dr. Chein of the Life Extension Institute studied 202 patients that he treated with hgh. Here are the results:

Patients reported improvement in the following areas:

- Attitude Toward Life 78%
- Back Flexibility 83%
- Body Fat Loss 82%
- Duration of Penile Erection 62%
- Emotional Stability 67%
- Exercise Tolerance 81%
- Frequency of Nighttime Urination 57%
- Hot Flashes 58%
- Healing Capacity 71%
- Healing of Other Injuries 61%
- Sexual Function, Sexual Potency/Frequency 75%
- Strength, Exercise & Body Fat, Muscle Strength 88%
- Muscle Size 81%
- Menstrual Cycle Regulation 39%
- Skin & Hair Care, Skin Texture 71%
- Skin Thickness 68%
- Skin Elasticity 71%
- Wrinkle Disappearance 61%
- New Hair Growth 38%
- Energy, Emotions & Memory, Energy Level 84%
- Memory 62%
- Resistance to Common Illness 73%

Dr. Chein guarantees a loss of 10 to 12 percent of body fat every six months if they are overweight, and a gain of 8 to 10 percent in muscle mass every six months, continuing every six months until body composition has reverted to that of a twenty year old (treating them with hgh along with other hormones). He says, "If I can't get the blood level of your hormones to look like that of a twenty year old, you can get all your money refunded."

Of course, now you can supplement hgh yourself from a spray bottle.

What the Experts Say

Dr. Jorgensen and Dr. Christian of Copenhagen, Denmark, in European Journal of Endocrinology, 1994:

"Replacement therapy with Growth Hormone has shown beneficial/normalizing effect on parameters such as cardiac and renal function, thyroid hormone metabolism, bone metabolism, sweat secretion, total and regional fuel metabolism and psychological well being"

Dr. Anthony Karpos, M.D.:

"We really have something here which may be able to reverse some of the problems associated with aging."

Drs. Ramias, Shamos, and Schiller of St. Joseph Hospital Medical Center in Phoenix, AZ:

The Doctors found HGH to be a potent anabolic agent "Daily Administration of human growth hormone in the first week after trauma would enhance the metabolic status.... resulting in reduced morbidity and earlier discharge from hospital." (May 1992, Journal of Surgery. Vol 111, 495-502.)

Dr. Jake Powrie, M.D. and Dr. Andrew Weissberger, St. Thomas Hospital, London England:

"All adults with growth hormone deficiency should now be considered for growth hormone replacement therapy." (1995)

Dr. Rosen, M.D. and Dr. G. Johannsson, M.D. of University Hospital, Goteborg, Sweden:

"There is no evidence suggestion that Growth Hormone Replacement Therapy causes any unfavorable long term side effects." (Hormone Research, 1995)v

This Nutrient based HGH precursor product is 100% safe!, with no know side effects.

There are NO HORMONES in this product.

How does it work

The orally administered Hgh Supplement-Human Growth hormone- is

- Inexpensive
- Easy to Use
- Pain Free
- No Ill Side-effects

If you want...

- | | |
|---|--|
| <ul style="list-style-type: none"> • Increase Muscle Mass • Restore vital organs that shrink with age • Improve Sexual Performance • Increase Energy Levels • Improve Cholesterol Level • Improve Immune Function • Normalize Blood Pressure • Strengthen Nails • Helps heal wounds • Strengthens immune systems • Improves cardiovascular and respiratory functions | <ul style="list-style-type: none"> • Decrease Body Fat • Reduce Wrinkles & Skin Spots • Hair Restoration & Hair Color • Improve Memory • Elevate mood and improve sleep • Increase cardiac output and stamina • Improve vision • Enhances effects of exercise • Increases bone density • Lowers blood pressure |
|---|--|

Elevate the Immune System

Hgh will help you improve the manufacture of new antibodies, increases production of T-cells and interleukin 2, induces the proliferation of disease fighting white blood cells, stimulates bacteria fighting macrophages and improves production or red blood cells.

Energy and Vitality

Not only can Hgh reinvigorate your mind, it can just as well reverse your whole attitude, outlook and expectations associated with the aging process. Hgh increases your concentration and thinking power, has an anti-depressive action on the brain, and can have a profound effect in increasing energy and a sense of confidence.

Stabilize Mood-Swings

Hgh acts in your brain as an antidepressant, raising B-endorphin levels, the brains own opiate, and lowering dopamine, which causes agitation. Hgh can help you reduce stress, improve concentration and redraw your focus.

Enhance Sexual Performance

As a powerful aphrodisiac, Hgh helps restore sexual potency and sexuality in men. Women using the Hgh had report an increase in libido, heightened pleasure and multiple orgasms. The Hgh also helps to alleviate menstrual and post-menopausal symptoms and furthermore, eliminate vaginal dryness.

Burn Fat and Reduce Cellulite

The most effective anti-obesity "agent" ever discovered, Hgh revs up the metabolism to former highs, selectively reducing the abdomen, waist, thighs and hips, while t the same time increasing muscle mass. In many cases, people actually "look like they've shed years off, along with the fat they've lost."

Fitness and Bodybuilding

Medical studies have proven that positive gains occur only while growth hormone is being secreted. Hgh has been found to significantly increase the effects of exercise and muscle building, including energy, muscle strength and endurance.

Rejuvenate Hair, Nails, and Skin

Antioxidants, other weight-training exercise and even other hormone treatments can be a great help in maintaining a youthful appearance. But only Hgh can help take a decade or so off your face.

Your skin regains thickness and youthful contours as it becomes more elastic and hydrated and you would start looking visibly younger, usually within a few weeks.

Hgh appears to have more of a tonic effect on hair. In clinical tests 38% reported new hair growth, coming in faster and thicker, and even in its natural color.

Your nails will be strengthened and Hgh has even been found to re-grow burned skin and close ulcerated wounds.

Cell Protecting

Antioxidants such as Vitamin C, Vitamin E, etc., can remove oxygen free radicals keep the proteases (destructive enzymes that cause cell damage) from becoming active. But growth hormone can act on the proteases directly. The Hgh activates a cellular defense force called protease inhibitors, which prevent free radicals from doing their deadly work.

Memory Improvement

Hgh can help to stimulate the rejuvenation and repair of your brain cells. Hgh also affects the proteins produced in the brain for storing your memories. Hgh deficiency has been directly related to the impairment of both long-and short-term memory as well as hand-eye coordination.

No more Sleeping Disorders

Hgh can be a great help in balancing your sleeping pattern. Not only can you feel more rested in the morning, many report for the first time in years they are able to sleep through the entire night. Others, found they need less sleep but contained more energy.

Increase Brain Function

Te brain and nervous system are made up of cells called neurons, even though they are permanent and never re-grows; Hgh can help you stimulate their repair and rejuvenation.

Furthermore

Hgh can also help to strengthen your bones, thicken your hair, re-color the grays that you hate, improve your vision, lower the cholesterol and blood pressure, improve your digestion, and quicken healing of wounds and so much more.

Testimonials

"My quality of life improved dramatically after I started taking Hgh-Releaser. I am now energized most of the time and my stress level have been greatly reduced. My performance at work improved and I am better rested at nights. Thank you for your product and quality service."

-Patricia, Oakland Park, FL

"Hgh-Releaser really worked for me!! I can actually tell that it is reversing some of the effects on aging. I used to catch every cold there is out there, but not anymore. I guess your product had helped with my immune system, because I feel so much stronger and refreshed than I've ever felt before."

-Cindy, Houston, TX

"I must say that I have been extremely happy with the results of this product. There hasn't been anything that would make my skin look better. Now I am free from acne and my blemish actually faded. Thank you again."

-Randy, Los Angeles, CA

"Thanks to your Hgh-Releaser, I am no longer starving myself! I have been consuming food moderately and still lost 5 inches over the last 2 months. My stomach is now flat and small, and the so-called "love handles" have disappeared. I will keep taking the product and test out the other benefits, thanks again!"

-Jeffrey, Lake George, NY

"I have order a 6 month supply of the Hgh-Releaser and just finished my third bottle. Maybe

it's just me, but I can't believe the improvements I've encountered. I've always had a very low blood pressure, to stay healthy I must take 5 medication pills each day, and I am getting tired of that. So I went for your product, I'm not yet saying I'm fully cured, but I've definitely made improvements. Even my doctor is impressed with the results. Wow!"

-Mike, New York, NY

>"Hi, I've heard many opinions regarding the benefits brought by Hgh and I was both skeptical and interested at the same time. I just turned 59 this year, and I must say the years are getting to me. I have wrinkles on my face and my arms, I've tried using the antiaging cream offered by infomercials, but nothing worked. Now I'm 4 months into your product and I admit, I'm happy and very much impressed. Even my daughter wanted to start taking your product as a precaution. Thank you for the great help."

-Irma, Richmond, VA

"After reading about the Hgh-Oral-Releaser, I had to give it a try, though I wasn't really hoping for much because I've taken a few other supplements in the past that did not deliver. But now, I'm writing to tell you that your product is different. My wife and I had been married 15 years and our intimacy level had decreased to none. I am still physically attracted to her, yet I just can't get my acts together. But after using the Hgh-Releaser for 4 months now, I am a brand new man who has a very happy wife. We both thank you."

-Delyn, Boca Raton, FL

"Please accept my gratitude for restoring my confidence. I have been loosing my hair dramatically and I was so stressed out about it that I'm constantly in a bad mood. After hearing about the Hgh-Releaser, I've immediately contacted your company and received my order right on time. I've been using the product for only 2 months and my girlfriend and I started to notice the changes. My hair had stopped falling and it's growing back fuller and faster. I am very impressed with your product and I think this is the best thing that had ever happened to me." Gratefully,

-Ikas, Lake George, NY

"I've been taking the Hgh-Oral -Releaser for about 2 month now and I love it! I am well rested at night and I've got more energy to put into my work. Plus, my memory is not as bad as it was before, I could relax more and I've cut down on my anxiety attacks."

-Angel, Phoenix, AZ

Do HGH-R Pills products have approval from the FDA?

Congress passed the Dietary Supplement Health and Education Act in 1994 also known as (DSHEA-1994). DSHEA created a new food category for dietary supplements. In order for the FDA to remove a dietary supplement from the market, it must prove that the product causes undue harm to the consumers.

DSHEA allows for low dose hormones (e.g.. oral GH, DHEA, melatonin, wild yam, natural testosterone, etc.) to be sold and marketed as dietary supplements. When delivered using a safe method of administration (e.g.. a tablet, capsule, cream, sub-lingual, etc.), hormones fall into the category of foods, not drugs.

How does the HGH-R react with my health condition or medication?

We are not aware of any negative interaction with our product and any health condition nor any side effects whatsoever, however, so you can consult with a health care professional if you choose. Our formula is fully FDA approved and manufactured by the highest standards (GMP certified) a lab can have in the United States. It contains no hormones, no animal extracts, no caffeine, no ephedrine and no glandulars.

Do I need a prescription for HGH human growth hormone?

Because our HGH-R Pills is a dietary supplement, orally administered, it is available without a prescription. Injection HGH products require a prescription from your physician.

[top](#)

How does Hgh-R differ from actual HGH products?

HGH-R stimulates the body's own production of human growth hormone. It is generally comprised of amino acids. These products do not contain actual HGH. These good products definitely increase HGH production. Unfortunately, these products are "short term" products and are not capable of prolonged benefits for years to come. Generally, the pituitary will increase growth hormone production for 3 to 6 months before the HGH production begins to decline due to over stimulation.

Are there any side effects for Hgh?

There are no known documented side-effects at this time.

How long does one container of Hgh-R last?

Each bottle contain a full one month supply.

[top](#)

How long do I have to be on the product before I see results?

It is imperative to stay on this program a minimum of three months before expecting to see results. Usually, the higher your growth hormone levels are, the longer it will take to see a difference. The lower the growth hormone levels, the quicker you see results.

Do you have to continuously take the HghOR to see the results?

Our product will cause your body to increase its daily production of HGH. The levels will not drop rapidly after you stop taking the product. We recommend you take it for 3-6 months and you may then choose to take it again a year or more later.

What else can be done to restore my youthful levels of Hgh?

Some of the most important factors in anti-aging is to follow a program of sensible eating and daily exercise. To maximize the effect of hgh , include a diet of fresh organic fruits vegetables and plenty of water. Revitalize your system to perform at it's peak.

What age is best to take HGH? And is it safe for children?

The best age to take anti-aging supplements is when the individual takes interest in keeping their youthful levels. This can be from the late twenties and later. Although anti-aging supplements were not originally developed for children, HGH is safe but not recommended for children who are able to produce healthful levels of growth hormone on their own. Children should consult their physician before use.

Why are you selling the HGH-R at such a low price?

Originally the process of producing HGH was extremely expensive (a years supply of the drug costing a patient about \$15,000 to \$30,000, and only the wealthy could afford it) and it was administered with injections. Today the cost has been vastly reduced so that the average person can afford it, and it is administered sublingual, by spraying the hormone under the tongue for fast, quick and easy absorption directly into the blood.

Do you ship our country?

We ship to all countries worldwide by USPS (United State Post Service) at no additional cost; The shipment takes about 7-10 business days for transit, depending on your country.

How long will it take for my order to arrive?

Please allow up to 2 weeks for USA delivery and up to 3 weeks for non-US delivery. If you do not receive your product within this time frame, please contact Customer Service.

Do you offer Money Back Guarantee?

Yes, we do offer Money Back Guarantee (less shipping & handling) Please see Return Policy & Warranty Section for details.
