This is in reference to Contact Lens Rule, Proj. No. R411002. I think passing this is a grave mistake for the welfare of the general public. The abuse of contact lens wear will be astronomical! I have already had patients tell me that they have gotten contacts through an eight hundred number for five years without an exam!! They came in when they developed an infection, which can be sight threatening. I understand the public has rights, but at what cost?
