Subject: spyware

Spyware is an unauthorized use of my computer, pure and simple.
The right of the government to spy is one thing, but private businesses should not be allowed to invade my privacy for any reason unless they ask permission in advance.
And that permission should NOT be buried in the license agreement that 90% of the people don't read.
Furthermore, the owner of the software should be asked if the software can send a report before any information is sent.
