I am so disgusted by spyware! It invades my privacy and it along with adware has caused me to have to reformat my harddrive twice already this year by causing problems and not being able to remove some of it. My father is constantly having problems with his computer as well. We can stop solicitors from calling our home but we can't stop adware and spyware from coming into our homes! That is ridiculous at best. I can see ads in the paper, on tv, on billboards, and hear them on the radio; so, why would I want to see them while I'm on my computer. I pay alot of money every month for my connection and between work and my family, I don't have time to weed thru all the spyware and manuveur around the adware!
