Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Emory Aaron

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Beth Angel

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Yovonne Autrey-Schell

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Bonnie Barfield

Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Gary Bea

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Ron Berti

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Peter Boisclair

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Jen Bradford

Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Jennifer Brown

Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Cecilia Burns

Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Jeanie Camuti

Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Melissa Cathcart

Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Jason Chinn

Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Gerry Coffey

Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Heide Catherina Coppotelli

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Suzanne Cranford

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Catherine Dash

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Erika Decarlo

Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Chelsey Dipasquale-Hunton

Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Diana Duffy

Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Charles Erickson

Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Deb Federin

Office of the Secretary, Room H-135 (Annex U)
600 Pennsylvania Avenue, NW
Washington, DC 20580
Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Lana Fisher

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Thank you.

Sincerely,

Kay-Adon Foster

Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Gilda Fusilier

Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Donna Gellman-Rodriguez

Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Elton Gissendanner

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Melanie Graf

Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Dear Federal Trade Commission,

When I buy a refrigerator, I want to know whether it's energy-efficient - period. If there are specific features that

make it less energy-efficient (whether they be icemaker or side-by-side freezers or whatever), I need to know that's part of the equation.

The label should tell me how the refrigerator compares to all refrigerators with the same capacity, so that I can decide for myself whether certain features are worth the energy inefficiency.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Alden Hanson

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Sara Hayes

Dear Federal Trade Commission,

Please establish energy use ranges that let consumers

compare among refrigerator models with different configurations and features.

Current comparison ranges detract from the label's usefulness by hiding differences in energy use resulting from different configurations and features.

These differences can affect consumer buying decisions. I consider models with different configurations and features when shopping for refrigerators, and I would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Thank you.

Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Eric Hensgen

600 Pennsylvania Avenue, NW
Washington, DC 20580
Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Michelle Hoff

Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

William Howald

Office of the Secretary, Room H-135 (Annex U)
600 Pennsylvania Avenue, NW
Washington, DC 20580
Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Marie-Louise Jackson-Miller

Washington, DC 20580
Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Vicki Johnson

Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

David Katz

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Michelle Kofler

Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Walter Kuciej

Office of the Secretary, Room H-135 (Annex U)
600 Pennsylvania Avenue, NW
Washington, DC 20580
Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Therese Lattanzio

These differences can influence consumer purchasing decisions - it certainly did in my case. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Andrew Lenz

Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Betsy A Leonard

Federal Trade Commission
Office of the Secretary, Room H-135 (Annex U)
600 Pennsylvania Avenue, NW
Washington, DC 20580
Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features. Buying the most efficient refrigerator in a particular size or configuration may be a far cry from buying a truly efficient refrigerator.

Customers need to be made aware of how much energy they could save if they chose a smaller refrigerator or a top-freezer model instead of a side-by-side one.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Customers should be making truly

informed choices.

Sincerely,

Edna Litten

Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Maureen Lynch

Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Jeff & Kimberly Marcero

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Toki Matthews

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

David McGraw

Washington, DC 20580
Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Ruth Mendelson

Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Do the right thing.

Create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Nancy Miller

Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Dorthea Montaine

Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Edward G. Mrkvicka

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Craig Nazor

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

David S. Nichols

Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Barbara Oleksa-Reiss

Washington, DC 20580
Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Leon Paley

Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Grace Payne

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Joel Peterson

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Eric Polczynski

Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Leslie Rabb

Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Ben Reed

Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

David Richmond

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Raquel Rodriguez

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Jay Rozner

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Linda Schmidt

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Louise Sellon

Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Lindsey Shere

Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

David Skolnick

Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Donna Smithremick

Washington, DC 20580
Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Priscilla Stanley

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Kimberly Stovarsky

Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Mark Swoiskin

Office of the Secretary, Room H-135 (Annex U)
600 Pennsylvania Avenue, NW
Washington, DC 20580
Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Travis Thumm

Washington, DC 20580
Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

William Turner

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Jason Michael Walker

Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Evan Weber

Washington, DC 20580
Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

We CAN do way better!

So, please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Theresa Wiegand

Office of the Secretary, Room H-135 (Annex U)
600 Pennsylvania Avenue, NW
Washington, DC 20580
Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Betty Winholtz

Washington, DC 20580
Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Michael Wortham, Maj, Usaf (Ret)

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.

Sincerely,

Qiyuan Zhou

Attn: Energy Label Ranges, Matter No. R611004

Dear Federal Trade Commission,

Please create energy use ranges that allow consumers to compare among refrigerator models with different configurations and features.

The current comparison ranges undermine the label's usefulness by hiding the significant differences in energy use that resulting from different configurations and features.

These differences can influence consumer purchasing decisions. Many of us already consider models with different configurations and features when shopping for refrigerators, and we would benefit from labels that made clear the energy differences between those models. Other consumers might be more willing to consider different types of models if labels made those differences clear.

Please establish comparison ranges that reveal, rather than obscure, these differences.
