SERUM GV

Extraordinarily effective topical skin cancer treatment

Clinically proven and professionally endorsed formulation—active ingredient prevents and helps correct melanoma

Stamp of approval—The medical profession has recognized Serum GV as the only available and effective topical treatment for skin cancer.

Keep the doctor away—Clinical trials and research studies have demonstrated that Serum GV's active ingredient—a glycol isolate of *annona muricata*—prevents development of melanoma; it has a natural affinity to cancer cells in their earliest stages and destroys them by cutting off their energy supply. Serves as an excellent non-surgical alternative for abnormal skin conditions—such as moles, lumps and warts.

Support System—In cases where cancer has already appeared in the skin tissue, Serum GV boosts the body's own defense systems to destroy the cancer cells.

Directions for use*

Cleanse and dry skin. If using Serum XL and/or Serum Rejuvenate, apply first and wait for thorough absorption. Gently massage a small amount of Serum GV into and around targeted areas of abnormality—such as moles, lumps and warts. Apply at least once daily; applying twice will speed up results. Allow for full absorption before applying creams, moisturizers, foundations and/or makeup.

***IMPORTANT**—Although Serum GV requires no prescription, consult your doctor if you feel your medical history suggests Serum GV (or any cosmetic) may not be right for you. As with all Bioque products, you need only apply a small amount. Improper application is wasteful and may cause unnecessary irritation. Avoid contact with eyes or mucous membranes. Not to be taken internally and, as with all cosmetics, keep out of the reach of children.
