THE TRUE FACTS ABOUT SNORING

(Music playing.)

MALE ANNOUNCER: Welcome to this week's edition of Medical Milestones, the show that brings you information vital to your good health. Our guest this week is Dr. Dennis Harris. Dr. Harris is an expert on snoring. He will be sharing some of the latest information on the causes and treatments for snoring.

And now, here's our host, Chris McKay.

CHRIS MCKAY: Welcome to the program. Did you toss and turn last night because your partner has that irritating habit? If so, you'll want to stay tuned. Whether you were the perpetrator or the victim, you should know that you're not alone.

Millions and millions of Americans are affected by snoring. That's why I asked Dr. Dennis Harris to join us today. Dr. Harris will tell us why we snore, and better yet, what we can do to stop it. Dr. Harris is a graduate of Ohio State University and performed a rotating internship at Grant Hospital in Columbus. He also established the Department of Physical Medicine and Rehabilitation at Scottsdale Memorial Hospital.

Dr. Harris, thanks for joining us today.
DR. DENNIS HARRIS: Well, good morning, Chris.

I’m delighted to be here.

CHRIS McKay: Doctor, why do people snore?

DR. DENNIS HARRIS: Well, snoring is really kind of fun to describe because people can actually visualize the process when I talk about it. If you get this mental image of the column of air that we bring in along the back of the noise and throat when we breath, if that goes down smoothly, then, of course, there’s no snoring and no problem.

On the other hand, if that column of air hits any little partial obstruction along the way, then that airflow becomes turbulent and that disturbed air begins to vibrate those soft tissues that lie in the back of the throat.

CHRIS McKay: Hmm.

DR. DENNIS HARRIS: And then you get (making snoring sound).

CHRIS McKay: (Laughter).

DR. DENNIS HARRIS: Or the noise we not so fondly know as snoring in some cases. You know, it’s only in the last few years that we really have started to understand what causes that little partial obstruction. And now we know that in about 90 percent of all of the people who are chronic snorers, that partial obstruction
is caused by the nightly accumulation of a lot of respiratory secretions that end up coming up from the lungs and the bronchi and coming down from the sinus cavity and the nasal cavity, and guess where they end up, in the back of the throat.

CHRIS McKay: Hmm.

DR. DENNIS HARRIS: Not only does that cause this mass of secretions that can, by itself, cause a little partial obstruction to the airflow, but in addition to that, what happens is that it irritates the tissues, they become swollen and congested and that narrows down the airway, and that makes the problem occur a whole lot easier.

CHRIS McKay: You know, Doc, that makes a lot of sense because I’ve noticed lately that if I fall asleep on my back in the middle of the night, my wife will nudge me and tell me I’m snoring, and I don’t really consider myself a snorer.

DR. DENNIS HARRIS: Gee, I’ve got to tell you, you’re a brave guy admitting that you snore on the radio.

CHRIS McKay: (Laughter). I know it, I know it. My friends will never let it down now. (Laughter).

DR. DENNIS HARRIS: (Laughter). Well, you know, I’ve got to tell you, you’re not alone, Chris. We keep revising our figures all the time and I have to tell
you that our new figures show that up to 40 percent of
the entire population are chronic regular snorers. I
mean, stop and think about that.

    CHRIS McKay: Wow.

    DR. DENNIS HARRIS: Right, yeah. This is
absolutely incredible. That means that two out of every
five people that walk down the street are snorers or 100
million people in the United States alone.

    CHRIS McKay: That's unbelievable.

    DR. DENNIS HARRIS: Absolutely incredible.

    CHRIS McKay: Wow. You know, the -- I know
you've done a ton of research in this area, Doctor. What
really got you involved, were you a snorer?

    DR. DENNIS HARRIS: Well, no, I was never a
snorer fortunately, but I've got to tell you, not only is
my wife a snorer, but I have a daughter, who's now 12,
who has been an unbelievable snorer for years.

    CHRIS McKay: (Laughter).

    DR. DENNIS HARRIS: I mean, this kid, you can
hear her through the entire house, through the walls,
through the doors, nothing matters.

    CHRIS McKay: Wow, really sawing the wood, huh?

    DR. DENNIS HARRIS: Oh, like you wouldn't
believe.

    CHRIS McKay: (Laughter). You know, we often
joke around about this stuff, but it really isn’t a
joking matter, is it?

DR. DENNIS HARRIS: Oh, no, no. It’s not a
joking matter at all. I mean, yes, you’re right, it’s
been the subject of a lot of cartoons. You know, through
all the years that I’ve been working with snoring, I
still have this little image in one corner of my mind of
Dagwood Bumstead lying on his side on the couch with the
Zs coming up.

CHRIS MCKAY: Right, right.

DR. DENNIS HARRIS: So, we always do think
about it from the funny side. But I’ve got to tell you,
it is really an absolutely incredible problem. And that
problem can be unbelievable in families.

CHRIS MCKAY: Oh, yeah, yeah.

DR. DENNIS HARRIS: Because this is a
significant social problem and much more than people ever
realized before. Stop and think about something. You
know, I literally talk to people every day about snoring
and I talk to families and couples from all over. I talk
to thousands of couples every year that have not been
able to stay together in the same room with their mate
for sometimes anywhere up to five years or even more than
that.

Well, what happens in relationships -- you
know, we live in such a tense time anyway.

CHRIS McKay: Sure.

DR. DENNIS HARRIS: So, relationships are kind of tough.

CHRIS McKay: Right.

DR. DENNIS HARRIS: But, you know, when do we really repair our relationships from all the stresses of normal life is at night.

CHRIS McKay: Absolutely.

DR. DENNIS HARRIS: And, you know, that's when we hold our mate, that's when we touch, when we talk about the little things that bring us closer. It's when we make love. All these things are a little hard to do when you're three doors down the hall.

CHRIS McKay: (Laughter). Yeah, that's very true. Very true.

DR. DENNIS HARRIS: You know, I've always known it was a problem because of dealing with couples and with people who snore. But something really focused this in. About two months ago there was an article that appeared in the popular press that talked about a survey that was done of all the divorces in the country in 1995. You know, we have about six million divorces in the country.

CHRIS McKay: Yeah.

DR. DENNIS HARRIS: Every year. So, what they
did was to go through all the applications to find out what the causes were. Amazingly enough, in 2 percent of all the divorce applications, the main cause of the divorce was listed as snoring.

CHRIS McKay: No.

DR. DENNIS HARRIS: Absolutely blew me away.

CHRIS McKay: Really?

DR. DENNIS HARRIS: Yeah, really. And, you know, stop and think about this, this is unbelievable. I mean, this is in one year, 120,000 divorces occur. That’s 120,000 marriages wiped out because of snoring in one year. And if that was what was listed as the main cause in all those, in how many others was it a contributing cause or in how many others was it not listed because it wasn’t an acceptable reason for divorce in that state?

CHRIS McKay: Well, you raise a good point.

DR. DENNIS HARRIS: I mean, it’s just absolutely unreal.

CHRIS McKay: Wow. Wow. You know, the -- but I’ll tell you, I experienced firsthand exactly what you’re talking about. And I’ll tell you, the first time that, you know, I stayed with my wife in her parents’ home, I was amazed -- I was actually awakened in the middle of the night by her younger brother. And, Doc, I
got to tell you, it was unbelievable. He was snoring so
loud, and he was two rooms down. And I can't even
imagine having to stay there every night and listen to
that.

DR. DENNIS HARRIS: Hey, I'll tell you what,
you know, you bring up a real good point, Chris, because
you were talking about her younger brother, and I have to
tell you, we think of people that snore as being older
and maybe overweight and, you know, having a six-pack of
beer every night --

CHRIS MCKAY: Right.

DR. DENNIS HARRIS: -- and all that type of
thing.

CHRIS MCKAY: Exactly.

DR. DENNIS HARRIS: But, you know, that is a
stereotype that is really not true. I mean, first of
all, younger people snore. Second of all, thin people
snore. We always think of this being a guy type of
thing. Well, that's not totally true. You know, we talk
about 100 million people in the United States being
snorers.

CHRIS MCKAY: Right.

DR. DENNIS HARRIS: Well, guess what, 60
percent of those are men, but 40 percent are women.

CHRIS MCKAY: Really? That many women?
DR. DENNIS HARRIS: Yeah. I mean, that's 40 million women that are snorers in the United States.

CHRIS McKay: Now, see, I wouldn't have thought that. I thought this was mostly a male thing.

DR. DENNIS HARRIS: Yeah, I think that most people feel the way -- the way that you did. That's one of the reasons I like to bring this out. The other point that you brought out was a real good one, about kids, because in the old days, we used to take out their tonsils and adenoids all the time. Now, we don't do that and because of that, 25 percent of all pre-adolescent children in the United States are snorers.

CHRIS McKay: Twenty-five percent?

DR. DENNIS HARRIS: Yeah. And not only that, with kids it's even worse because they develop these huge tonsils and adenoids and they literally block off the airflow, and most of these kids actually have a condition called sleep apnea, which is a much more serious problem, and we'll talk about that in a little more detail as the show goes on.

But it is a big problem and it really does need to be taken care of in kids.

CHRIS McKay: Wow. I didn't realize that either.

DR. DENNIS HARRIS: Um-hum.
CHRIS McKay: (Laughter).

Dr. Dennis Harris: Hey, listen, we’re going to bring out all kinds of incredible things during this show that your listeners have never been aware of before.

CHRIS McKay: Well, that’s great. That’s exactly why we booked you for this show, Doctor.

Dr. Dennis Harris: (Laughter).

CHRIS McKay: We know that you have all kinds of information that we may or may not want to hear.

Dr. Dennis Harris: Well, there are some bad news things, but we’ve got some good news things, too.

CHRIS McKay: Well, Doctor, I’m going to interrupt you right there for just a minute. We’re going to have to take a break and we’re going to come back with some good news from Dr. Dennis Harris right after this break.

(Brief pause.)

CHRIS McKay: And we’re back. Before the break, we talked a little bit about the difference between men and women. Men do snore more than women, but a lot of women snore, and it can be a problem for youngsters, too. Most of the time, as we get older, it becomes more of a problem.

Dr. Dennis Harris is with us today and we talked about, and Dr. Harris has addressed, what causes

For The Record, Inc.
Waldorf, Maryland
(301) 870-8025
many of us to snore. And now, we’re going to talk about
some good news out there that can help. Before the
break, again, we had mentioned a little bit about the
number of people that snore and the difference between
men and women.

   Doctor, you touched on an interesting thought
in that I really thought it was only older people that
were affected.

   DR. DENNIS HARRIS: You know, you bring up a
very good point. We do tend to snore more and more
people snore the older we get. Let me give you an
example, though. If you took a group of 100 people, 50
men and 50 women, that were age 20, 20 years old, and you
assessed all of them, what you would really find
typically is that 5 percent of women were chronic snorers
and 29 percent of the men were chronic snorers. So,
there’s a big difference at that age.

   CHRIS McKAY: .So, there’s definitely more men.

   DR. DENNIS HARRIS: Right. By a long ways. As
you follow that group up to age 50, by that age, 40
percent of all of the women will now be chronic snorers
and 60 percent of all the men will be chronic snorers,
and by age 70, 70 percent of both sexes will be chronic
regular snorers.

   CHRIS McKAY: Wow.
DR. DENNIS HARRIS: Yeah. So, you can see that more people will join that group of chronic snorers as they age and not only that, what those figures don’t show is that very definitely the snoring progressively gets worse as time goes one.

CHRIS MCKAY: So, there is -- that’s what I was just going to ask you. There’s a progression then to snoring.

DR. DENNIS HARRIS: Oh, yeah, no question about it. You know, we used to think -- that’s a major point that I want to bring out. We used to think that there were a lot of different kinds of snorers. For example, Chris, you talked earlier in the show about the fact that you snore on and off, you know.

CHRIS MCKAY: Right.

DR. DENNIS HARRIS: And usually just on your back.

CHRIS MCKAY: Right.

DR. DENNIS HARRIS: But let me tell you, you are an amateur. (Laughter).

CHRIS MCKAY: (Laughter).

DR. DENNIS HARRIS: You’re a beginning snorer.

CHRIS MCKAY: Okay. (Laughter).

DR. DENNIS HARRIS: And typically, that is the way people start to snore. They typically snore only
occasionally, usually on their backs and usually with their mouth open and the snoring is kind of mild to moderate.

CHRIS MCKAY: Um-hum.

DR. DENNIS HARRIS: There are times when it gets a little worse. But most of the time it’s mild to moderate. Well, snoring is kind of like playing the violin, you know, the more you practice, the better you get.

CHRIS MCKAY: (Laughter).

DR. DENNIS HARRIS: (Laughter). And sure enough, as time goes on, that individual will begin to snore more nights out of a week, the time during each night that that person will snore will become longer. It will become louder, and eventually, that person will be able to snore in any position.

CHRIS MCKAY: (Laughter).

DR. DENNIS HARRIS: Yeah. I mean, even on their stomach, no question. Now, the incredible part of that is that, at that point, 20 percent of all those people that are chronic snorers will then go on to progress to a very serious problem called sleep apnea.

CHRIS MCKAY: Now, I’ve heard of this. As a matter of fact, a friend of mine has this.

DR. DENNIS HARRIS: Oh, yeah, it’s a very, very
serious medical problem, and it's been recognized in that
regard for many, many years. It is, for your listeners
who aren't familiar with it, it is the condition in which
the snorer actually stops breathing for periods of
anywhere from 10 or 15 seconds all the way up to even a
minute or more, and does it many times every hour.

CHRIS MCKAY: And this is very scary. This is
a serious, serious problem.

DR. DENNIS HARRIS: When you said scary, it's
not only scary for the person, but stop and think of the
person's mate. I mean, I have talked to men or women who
literally stay up almost the entire night because every
time their mate stops breathing, they are absolutely
scared to death that they won't start again.

We used to think in medicine that people
developed sleep apnea and that was a separate condition.
But like I just pointed out, it is not a separate
condition, it is the end result of somebody who first
begins to snore progressing all the way through these
different stages and ending up with sleep apnea.

CHRIS MCKAY: Yeah (inaudible).

DR. DENNIS HARRIS: Yeah.

CHRIS MCKAY: Now, Doctor, we've spent some
time here talking about the problem. You actually have
come up with a solution, is that correct? You've created
a product that can help with snoring?

DR. DENNIS HARRIS: I have, and it has this
very unique name. It's called Dr. Harris' Snore Formula.
(Laughter).

CHRIS MCKAY: (Laughter). Imagine that.

DR. DENNIS HARRIS: It took a whole crew to
figure this one out. (Laughter).

CHRIS MCKAY: (Laughter).

DR. DENNIS HARRIS: Anyway, it's really neat.
It -- not because I created the product, but because of a
number of other things. First of all, it is 100 percent
natural, and I want to bring this out. It is not a
medication. A medication -- you know, I've been a doctor
for 30 years. I've prescribed my share of medications
for sure.

CHRIS MCKAY: Sure.

DR. DENNIS HARRIS: But, you know, through the
years, we've always been aware of the fact that
medications have become stronger and stronger, they've
become more and more effective, but they also have become
more dangerous.

CHRIS MCKAY: Hmm.

DR. DENNIS HARRIS: What do I mean by that?
Well, there are more side effects. The side effects have
typically become more serious through the years, and
interestingly enough, people become more and more allergic to medicines. So, even medicines that we use for allergies, sometimes people become allergic to.

CHRIS McKay: Right, right. Many side effects from what I understand.

DR. DENNIS HARRIS: Oh, yeah.

CHRIS McKay: Yeah.

DR. DENNIS HARRIS: And I -- I'm going to interrupt and break my train of thought for one reason.

CHRIS McKay: Okay.

DR. DENNIS HARRIS: I have to tell you that there was a recent publication -- in fact, it was Newsweek, that had printed a special edition at the end of the 1997, kind of summarizing the year and all that.

CHRIS McKay: Um-hum.

DR. DENNIS HARRIS: And they were talking about, in one section, medicine. They brought out the fact that in the United States, every year, approximately 21,000 people die of AIDS --

CHRIS McKay: Um-hum.

DR. DENNIS HARRIS: -- approximately 24,000 people die of homicide. 63,000 people die every year from medications.

CHRIS McKay: From medications?

DR. DENNIS HARRIS: From medications that they
take.

CHRIS MCKAY: Wow.

DR. DENNIS HARRIS: Unbelievable.

CHRIS MCKAY: And these aren’t overdoses?

DR. DENNIS HARRIS: No, no. These are people who take it in the normal dosage.

CHRIS MCKAY: Wow.

DR. DENNIS HARRIS: 63,000 people every year. That’s more people than die in automobile accidents, you know. We only have 50,000 -- that’s more people than that died in the entire Vietnam War.

CHRIS MCKAY: Oh, that puts it in perspective.

DR. DENNIS HARRIS: Yeah. And we do -- and that’s how many people die from taking their normal medication every year. So, when I say this is a natural product, that has a lot of implications, you know. We don’t get the kind of side effects and allergies with natural products that we see with medications.

CHRIS MCKAY: Yeah.

DR. DENNIS HARRIS: You know, for example, in Dr. Harris’ Snore Formula, we’ve had over 100,000 people using the product. We have never yet had the first report of any kind of side effects or allergies.

CHRIS MCKAY: Oh, that’s great. How long has the product been out, Doc?
DR. DENNIS HARRIS: It’s been out about two years on the marketplace.

CHRIS McKay: Um-hum.

DR. DENNIS HARRIS: And as I said, we’ve had about 100,000 people that have used the product. I did -- I did a lot of testing for about two years prior to the time that we put it on the market. I tested it on about 220 patients and, you know, we wanted to see how effective it really was.

CHRIS McKay: Sure. And the results are?

DR. DENNIS HARRIS: The results were wonderful. We were hoping that it was maybe going to help 50 percent of the people or so.

CHRIS McKay: Yeah.

DR. DENNIS HARRIS: In reality, 86 percent of the people that were taking this formula had really good to excellent results.

CHRIS McKay: Oh, that’s fantastic.

DR. DENNIS HARRIS: Yeah. And that’s really kind of held up -- we run about 86 to 90 percent of the people that have good results that take it.

CHRIS McKay: So, these are capsules that you take?

DR. DENNIS HARRIS: Well, they’re actually a little tablet.
CHRIS McKay: Okay.

Dr. Dennis Harris: It’s taken by weight. It’s really a convenient way, an easy way to solve the problem. You just take them about 30 minutes before you go to bed so that they can be absorbed and be ready to work when you go to sleep. And the way it works is absolutely neat. It is composed of four natural digestive enzymes and a variety of herbs. The enzymes begin to do their job. They literally start to digest or breakdown all of these respiratory secretions that are in the back of the throat and they allow the body to absorb them and remove them, and the herbs reduce the tissue swelling.

So, between the two things, what we’ve been able to do is to open up the airway and smooth out the airflow and then the snoring goes away.

CHRIS McKay: Interesting. We’re going to take a break right here and come back with more from Dr. Harris right after this break.

(Brief pause.)

CHRIS McKay: We’re back with Dr. Dennis Harris, who has introduced help for millions and millions of Americans who have a problem or the husband or wife or somebody they live with has a problem with snoring.

Doctor, I’d like to go back and touch on

For The Record, Inc.
Waldorf, Maryland
(301)870-8025
something that we had talked about just a bit earlier, and that was about really the -- you had talked briefly about the progression of snoring. And I got to tell you, I had mentioned earlier, has sleep apnea. And he actually wears a breathing apparatus to -- as I understand, to keep the airway open.

DR. DENNIS HARRIS: That's called a CPAP machine and that stands for continuous positive airway pressure. Let me -- let's talk -- let's go back and talk for a moment about this progression again.

CHRIS MCKAY: Um-hum.

DR. DENNIS HARRIS: And what happens mechanically to people when they snore.

CHRIS MCKAY: Because that can be the result at the end, right?

DR. DENNIS HARRIS: Yeah.

CHRIS MCKAY: Having to wear something like that?

DR. DENNIS HARRIS: Yeah, it really is. And let me tell you, we talked about what's -- you know, how snoring -- what causes snoring and all that and then about the partial obstruction.

Well, what really happens is that -- and you can imagine this if you've ever heard somebody snore. When that air hits that little partial obstruction,
you’re really straining to try and get air past that. And when you’re doing that, you cause a little bit of a vacuum at that point of obstruction. And since that point of obstruction is the same almost every time you snore, that strain -- that mechanical strain that’s caused by the vacuum is put on the airway at the same place every time you snore.

CHRIS MCKAY: So, the result is it starts to collapse?

DR. DENNIS HARRIS: Yes, that’s exactly right.

CHRIS MCKAY: Wow.

DR. DENNIS HARRIS: Over the years, you start to get structural weakness in the airway and it begins to literally start to collapse and that’s why it progresses to sleep apnea, because when it gets to the point where it is so weak it literally collapses down and absolutely blocks the airflow.

CHRIS MCKAY: Wow.

DR. DENNIS HARRIS: Yeah. It’s absolutely unreal. And, you know, when I describe it like this, it becomes very logical to people and it’s amazing to me that medically we never saw this for so many years. But that is exactly what occurs.

And when you get to that point where the sleep apnea is due to this kind of a structural weakness, which
then gets worse and worse --

CHRIS McKay: Um-hum.

Dr. Dennis Harris: -- then, you know, it’s not a matter of taking anything for it, it’s a matter of doing something about it. And the one thing that is the most common remedy is the CPAP machine.

CHRIS McKay: Hmm.

Dr. Dennis Harris: And you put that in -- it’s a mask that is worn over the face. Air is forced under pressure continuously all the way down through the airway, and what you’re doing is forcing air down with enough pressure that it pushes the airway open and keeps it that way.

Well, as you can imagine, that’s not exactly the most wonderful thing to have to do every night all night.

CHRIS McKay: I can’t imagine having to sleep with that. Now, Doctor, will your product help in those instances?

Dr. Dennis Harris: What we find is that in the early stages of sleep apnea, we do have a high rate of success. But once it reaches a moderate to severe level, I mean, that really is a structural problem that demands a physical solution to it.

CHRIS McKay: So, what you’re really saying is
people have to understand that they need to take care of this early on.

DR. DENNIS HARRIS: That’s the good news.

CHRIS McKAY: Okay.

DR. DENNIS HARRIS: That’s the good news, exactly. You know, we didn’t have good ways to handle snoring for a long period of time, and so, people did go through this progression. But the good news is that you can stop this. You can absolutely stop this progression. If you go ahead and -- well, let’s talk about some of the medical things that go on with snoring. Can we do that for a moment?

CHRIS McKAY: Sure, sure.

DR. DENNIS HARRIS: Okay. We didn’t realize for many years that snoring was a real medical problem. All we thought about was what happened to people once they had developed sleep apnea and we didn’t think any of these other problems occurred in just the snorer. Now, for the first time last year, medical organized medicine actually came out and said, snoring is a true medical problem.

CHRIS McKAY: So --

DR. DENNIS HARRIS: Because they’re finally beginning to understand the progression.

CHRIS McKAY: So, it’s taken this long?
DR. DENNIS HARRIS: Yeah. Only about 4,000 years, but that’s all right. (Laughter).

CHRIS MCKAY: (Laughter).

DR. DENNIS HARRIS: We’re a little slow in organized medicine. (Laughter).

CHRIS MCKAY: (Laughter).

DR. DENNIS HARRIS: Anyhow, what are some of the things that really occur? You know, they started gathering more statistics about snoring, and lo and behold, what they started to realize was that there are both short-term and long-term problems, medical problems associated with snoring. For example, the long-term medical problems are a 400 to 500 percent increase in the level of risk of developing heart attacks, strokes and high blood pressure compared to non-snorers.

CHRIS MCKAY: Wow.

DR. DENNIS HARRIS: I mean, this is a huge risk factor. That’s almost at a rate equivalent to smoking a couple of packs of cigarettes a day or something like that, okay? So, this is a big risk factor.

CHRIS MCKAY: Yeah.

DR. DENNIS HARRIS: Well, they started coming out with these statistics and they said, holy cow, why is this happening. Well, what they began to do is to measure and investigate various aspects of the problem

For The Record, Inc.
Waldorf, Maryland
(301) 870-8025
and they found that when people snore, the level of oxygen in the blood stream drops down significantly in a vast majority of these snorers. And so, what’s happening, all of the blood goes to all the vital organs, the brain, the heart, the liver, the kidneys and so forth, and guess what, there’s a lower than normal level of oxygen that occurs.

Well, that means that those organs are being oxygen-deprived and oxygen, of course, is our critical element for -- to keep the cells functioning normally and alive.

CHRIS MCKAY: Right.

DR. DENNIS HARRIS: So, over a period of time, little bits of damage begin to occur and as they accumulate more and more, then eventually the person becomes symptomatic and develops either heart attacks or a stroke or high blood pressure.

CHRIS MCKAY: Wow.

DR. DENNIS HARRIS: Yeah, it’s a big thing. They just did a big study that was published in a medical journal called Sleep, which is where all the sleep disorder reports come out, and this study demonstrated that chronic snorers have a 300 percent higher risk of being involved in an automobile accident in a five-year period compared to non-snorers, and a 700 percent higher
risk of being involved in multiple automobile accidents over a five-year period.

CHRIS MCKAY: Well, great. (Laughter).

DR. DENNIS HARRIS: I mean, yeah, you know, that's not the good news. That's the bad news.

(Laughter).

CHRIS MCKAY: (Laughter). Well --

DR. DENNIS HARRIS: (Laughter). But again, you know, the good news is we can stop that whole thing from getting to that point.

CHRIS MCKAY: That's great. Dr. Harris, you've convinced me. I'm going to put your product to the test and try it myself. I'd encourage my listeners to do the same. What an easy solution. No surgery and the result is a peaceful night's sleep and it sounds like you're going to continue living after that as well.

We're out of time. Doctor, any parting thoughts?

DR. DENNIS HARRIS: One real parting thought. If you don't carry anything away, if you hear -- if you're a listener and you haven't carried anything away that we've talked about, remember one thing, we have the opportunity now of stopping this progression of snoring, and when you stop it, at that point, the healing power of your body takes over, and eventually, all of these -- all

For The Record, Inc.
Waldorf, Maryland
(301) 870-8025
of this damage repairs itself and you get back to normal.

   Don't wait. Pick up the phone today, try our
product. It is absolutely without risk to you because we
have a 100 percent money back guarantee. You have
nothing to lose but your snoring.

   CHRIS McKay: You heard it here, first. Again,
I encourage anyone who's experiencing snoring to pick up
the phone and call Dr. Harris. Doc, we're going to have
you back again. We covered a lot of material, I know
there's a lot more. Have a great day and take care.

   And that's it for this week's show. We'll be
back next week.

Snoring is a condition that is associated with serious and potentially life-threatening medical problems. Snorers have a much higher risk of heart attacks, high blood pressure, and strokes. Snoring also produces sleep disturbances in the person snoring and their mate. Snoring also leads to serious social problems and broken relationships.

DIRECTIONS:

Take 30-45 minutes before bedtime. Take by weight as follows:

125 lbs or less, take one tablet.
125-220 lbs, take two tablets.
Over 220 lbs, take three tablets.

Fast Results:

Take double the usual dose for the first 3 weeks. When maximum results are obtained, lower the nightly dosage by ½ caplet each week to achieve the lowest dose that controls snoring. Keep out of reach of children. If pregnant, check with your physician before use.

INGREDIENTS:

Acerola, Amylase, Cayenne Pepper, Cellulase, Echinacea, Elderberry, Eucalyptus, Fenugreek, Lipase, Protease, Red Clover, Rose Hips, Slippery Elm, Yarrow.

A UNIQUE COMBINATION OF ALL NATURAL HERBS AND ENZYMES THAT GENTLY WORK TOGETHER TO PREVENT SNORING

100% Natural
Easy to take tablet
No side effects or allergies
Doctor Formulated and tested
86% of those using this formulation had good to excellent results

Dr. Harris’ Original Snore Formula

Exhibit B
A REPORT FROM:
DENNIS H. HARRIS, M.D.

OCCURRENCE:

Statistics have proven that over 40% of the adult population are chronic, regular snorers!

DANGERS OF SNORING:

- Snorers have a markedly higher risk of developing heart attacks, high blood pressure, or strokes.
- Snoring often produces daytime sleepiness or daytime fatigue.
- Snorers have a much higher rate of automobile accidents than non-snorers.
- Snoring causes sleep disturbances that lead to increased anxiety, hyper-irritability, decreased memory, and poor concentration.

SOCIAL IMPACT OF SNORING:

- Snoring often causes resentment between partners, leading to a loss of intimacy and deterioration of relationships.
- Increased irritability leads to failing relationships at home and among co-workers.
- Poor memory and concentration produce decreased work performance.

CAUSE OF SNORING:

Most cases of snoring are due to the nightly accumulation of secretions in the back of the throat and the associated tissue swelling. These factors produce a partial airflow obstruction and narrowed airway, allowing vibration of the soft tissues in the throat.

How Dr. Harris' Original Snore Formula™ Works:

The unique combination of natural enzymes metabolizes the secretions, allowing the body to absorb them. The herbs reduce the tissue swelling. The result is to open the airway, smooth out the airflow and eliminate the snoring.

About Dr. Harris' Original Snore Formula™:

This unique formulation was created by Dennis H. Harris, M.D., a recognized medical expert in the field of snoring. Dr. Harris tested this preparation on 220 subjects. Amazingly, 86% of those using this formulation had good to excellent results. Good Housekeeping magazine also performed an independent study that demonstrated a marked improvement in the vast majority of users. Over 40,000 people have used the product over the past 12 months with good results.
Dr. Harris’ Original

SNORE FORMULA

Product Information Booklet
WHY SHOULD I WORRY ABOUT SNORING?

Although snoring has been the object of jokes and cartoons, medical science has determined that snoring is associated with serious medical conditions. Snorers are known to have a much higher rate of heart attacks, strokes and high blood pressure than non-snorers. The risk of developing these medical problems increases the longer that a person snores and the more severely they snore. Therefore, it is critical that snoring be brought under control and kept under control indefinitely. By keeping the snoring under control, the risk factors for all of these serious medical conditions gradually decrease toward normal over a period of years.

In addition, studies done at Stanford University and other institutions have shown that snorers have a higher rate of automobile accidents than non-snorers! Why would this happen? Snoring is known to cause reduced oxygen flow to the brain and other organs, resulting in daytime fatigue or sleepiness, slower reflexes and reduced attention span. These factors cause impairment of our ability to concentrate on road and traffic conditions.

WHAT ARE SOME OF THE OTHER EFFECTS OF SNORING?

Snoring is often a significant factor in relationships, causing disturbed sleep patterns, daytime fatigue and hyper-irritability in the non-snoring partner. In more extreme cases, the partners have to sleep in separate bedrooms. This produces increasing resentment, loss of intimacy and, eventually, deterioration of the relationship.

These factors also cause anxiety and depression, often leading to failing relationship with friends and co-workers, as well as reduced work performance.

WHO SNORES?

Medical authorities have estimated that up to 40% of the entire population are chronic, regular snorers.

Snoring increases in severity and prevalence with increasing age. For example, an average 20 year old group would include 5% of females and 29% of males that are chronic snorers; an average 50 year old group would include 40% of females and 60% of males that are chronic snorers; and an average 70 year old group would include 70% of all males and females that are chronic snorers.
WHAT CAUSES SNORING?

Our respiratory system constantly produces secretions in the nasal cavity, sinuses, bronchi and lungs. Although we easily dispose of these secretions during the day, the secretions begin to accumulate in the back of the throat at night when we lie down in the horizontal position. These secretions begin to irritate the surrounding tissues, producing congestion and swelling. These factors produce a partial obstruction to the airflow, resulting in airflow turbulence which vibrates the soft tissues in the back of the throat and produces the sound of snoring. The narrowing of the airway due to the tissue swelling causes further relaxation of the soft tissues, allowing snoring to occur easier. **More than 85% of the cases of snoring are due to these factors!**

The remaining cases of snoring are due to other conditions such as deviation of the nasal septum, nasal polyps, malformations of the mandible (lower jaw), excessively long uvula or excessively long tongue.

WHAT MAKES SNORING WORSE?

There are many factors that have been identified which may increase the frequency and/or severity of snoring. These include the following:

1. **Obesity.** Excess weight gain results in the deposition of fat in all tissues, including those around the mouth and throat. This produces narrowing of the airway, loosening of the soft tissues and allows snoring to occur easier.
2. **Alcohol Consumption at Night.** Consuming the equivalent of more than 2 drinks through the evening results in excess relaxation of the soft tissues in the back of the throat. These tissues then vibrate easier, producing more frequent and more severe snoring.
3. **Increased Respiratory Secretions.** This condition may arise because of many factors, including cigarette smoking, chronic bronchitis, allergies, chronic sinusitis, chronic rhinitis (nasal congestion) and mucous-producing foods eaten in the evening, such as dairy products.

HOW DOES DR. HARRIS’ ORIGINAL SNORE FORMULA® WORK?

This unique formulation includes a secret combination of 100% natural enzymes and herbs. These compounds are all extracted from plants and are repeatedly tested to insure the highest quality and potency.
The enzymes act to digest the secretions, allowing the body to metabolize and absorb them. The herbs reduce the tissue swelling and congestion. The result is that the airway is opened, the airflow is smoothed out and the snoring is markedly decreased or eliminated.

**HOW SHOULD I TAKE DR. HARRIS’ ORIGINAL SNORE FORMULA®?**

If you are to derive the maximum benefits from the product, it must be taken correctly.

The dosage is initially determined by weight. If you weigh 125# or less, take 1 caplet, 125#-220# takes 2 caplets, and over 220# take 3 caplets.

We have found that each individual is unique, and therefore the dosage will vary considerably. To obtain the fastest and best results, we highly recommend that you take double the usual starting dosage for the first three weeks. After the maximum benefit is obtained, lower the dosage by one half caplet each week until you achieve the lowest dose at which satisfactory results are still maintained. Continue using that lower dosage as your maintenance dosage indefinitely.

Higher dosages may produce some dryness in the nose and throat. This only indicates that Dr. Harris’ Original Snore Formula® is working well for you! A humidifier will relieve the dryness if it is a concern.

There are many things that you can do to increase the effectiveness of the product, including the following:

1. Take Dr. Harris’ Original Snore Formula® 30-45 minutes before bedtime.
2. Be sure to take Dr. Harris’ Original Snore Formula® on an empty stomach. Do not eat for two hours before taking the product.
3. Avoid dairy products, such as milk, butter, cheese, etc. for four hours before bedtime, as they may increase the production of respiratory secretions.
4. Severe allergies, smoking or evening alcohol consumption tend to make snoring worse. These conditions may require you to increase the recommended dose of Dr. Harris’ Original Snore Formula® by one half to one caplet in order to obtain satisfactory results.

Life style changes, including weight loss, stopping cigarette smoking and reducing evening alcohol consumption, will not only improve snoring control but also lead to better health!
HOW SAFE IS DR. HARRIS’ ORIGINAL SNORE FORMULA®?

Since Dr. Harris’ Original Snore Formula® is a 100% natural formulation, we have experienced none of the all too frequently seen side effects and allergic reactions commonly associated with over the counter and prescription medications. In fact, after two years of clinical studies and tens of thousands of satisfied users, we have no reports of side effects, allergies or intolerance of the product.

Furthermore, thousands of people now using the product are taking other medications as well. To date, we have received no reports of cross-reactions with any other medication. However, if this is a concern, please check with your physician.

Although the product is extremely safe, you should check with your physician prior to taking the product if you are pregnant or a nursing mother.

CAN I GIVE DR. HARRIS’ ORIGINAL SNORE FORMULA® TO MY CHILD?

Since we no longer remove children’s tonsils and adenoids routinely, it is estimated that 20-25% of all children are now chronic snorers. Many of these children also suffer from sleep apnea, a condition in which the person completely stops breathing for up to 30 seconds or more several times each hour. This is a serious medical condition!

Dr. Harris’ Original Snore Formula® is being taken by hundreds of children across the country and appears to be quite safe.

The recommended dosage for children weighing 65-100# is one caplet and for those weighing less than 65#, one half caplet.

We advise you to check with your physician before giving Dr. Harris’ Original Snore Formula® to children younger than six years of age.

HOW EFFECTIVE IS DR. HARRIS’ ORIGINAL SNORE FORMULA®?

Two years of clinical testing by Dennis Harris, MD on 200 chronic snorers produced good to excellent results in 86% of the test subjects taking this formulation.

Good Housekeeping, in an independent study, demonstrated that the formulation used in Dr. Harris’ Original Snore Formula® produced major improvement in the vast majority of test subjects.

Reports from those using the product indicate a similar level of satisfaction.
WILL I HAVE TO TAKE DR. HARRIS’ ORIGINAL SNORE FORMULA® FOREVER?

Like many medical problems, such as heart disease, hypertension and diabetes, snoring is a condition that can be controlled but not cured. Therefore, once you have determined your maintenance dosage level, you must take that dosage regularly and indefinitely.

We have found that many users of Dr. Harris’ Original Snore Formula®, after maintaining good results for 5-6 months, are able to either gradually reduce their dosage even further, take Dr. Harris’ Original Snore Formula® every other night, or both.

It is vitally important that you keep your snoring under control indefinitely. The longer your snoring is controlled, the lower your risk factors for heart attacks, strokes and high blood pressure.

ARE THERE ANY OTHER BENEFITS OF DR. HARRIS’ ORIGINAL SNORE FORMULA®?

The top quality variety of herbs and enzymes used in Dr. Harris’ Original Snore Formula® have many other significant benefits.

Recent studies suggest that protease may actually help remove cholesterol from partially clogged arteries, thereby restoring circulation.

Protease, lipase and amylase work together to help relieve heartburn and gastric irritation, improving digestion.

The herbs are known to produce the following benefits:

1. **Acerola.** This South American cherry contains the highest concentration of natural Vitamin C known. It is helpful in reducing inflammation, preventing and treating upper respiratory infections, acts as a stimulant to the immune system and is a powerful anti-oxidant.

2. **Eucalyptus.** Studies have shown that this herb is effective in killing the flu virus and many types of bacteria. It is also widely used in the treatment of respiratory conditions.

3. **Elderberry.** This herb is widely used to reduce fever, reduce inflammation, induce pain relief, treat colds, bronchitis and asthma, and decrease allergic symptoms.

4. **Yarrow.** This herb is known to help cleanse the blood of impurities, including uric acid. It is useful in the in the treatment and prevention of
gout, digestive problems, nausea, and fever. It is a powerful virus inhibitor, and it is used in the treatment of colds and flu.

5. **Slippery Elm.** This herb is used to promote digestion, treat intestinal ulcers, neutralize excess stomach acidity and absorb foul gases. It is also used in the treatment of bronchitis and cough.

6. **Echinacea.** This marvelous herb is a natural antibiotic, anti-viral and anti-inflammatory compound. It is also a potent blood cleanser and rebuilds, as well as a powerful immune system stimulant.

7. **Red Clover.** This herb has been used by some physicians in the treatment of cancer. It is an excellent blood purifier and is widely used in the treatment of liver congestion.

8. **Rose Hips.** This herb contains high levels of Vitamin C and bioflavonoids. It is an excellent natural anti-oxidant, builds and strengthens body tissues and is useful in building and maintaining a good blood vascular system.

9. **Cayenne.** This herb has many beneficial effects. It aids in lowering serum cholesterol and serum triglycerides, also decreasing LDL cholesterol and therefore decreasing the risk of heart attacks and strokes. It speeds fat metabolism, burning off excess fat more rapidly. It increases heart action without increasing blood pressure, thereby improving circulation and acting as a general body stimulant. It has high Vitamin A content, promoting normal vision and healthy immunity. It increases the effectiveness of all other herbs by aiding in the more complete and rapid absorption of those herbs. It aids in the removal and cleaning of stomach tissue, and is helpful in healing stomach and intestinal ulcers.

**WHAT OTHER TREATMENTS ARE AVAILABLE FOR SNORING?**

Many attempts to treat snoring have been made through the years without much success. From the standpoint of medications, antihistamines, sedatives, anti-inflammatories, anti-depressives and anti-anxiety preparations have been notably unsuccessful in controlling the problem.

Various types and shapes of pillows have been tried with little success.

Homeopathic medications have a very poor record of success.

Dental appliances that shift the lower jaw forward or pull and hold the tongue forward have only met with limited success.
Finally, the newer surgical procedures using conventional or laser surgery that remove large amounts of tissue from the back of the mouth have proven far less than ideal. They cause pain which may linger for up to 3 months following surgery. Several deaths have now been reported as directly resulting from the procedure. Many complications have also been reported, including the development of nasal speech, difficulty in swallowing, change in taste sensation and nasal regurgitation, due to the removal of large amounts of tissue, occurs when food or liquid that you intend to swallow goes up instead of down, exiting through the nose. The worst problem, however, is that not only does surgery almost never completely eliminate snoring, but when patients having had these surgical procedures were evaluated 13 months after surgery, only 46% even obtained a moderate decrease in snoring!
Snore Formula Eliminates Snoring Naturally.

As heard on radio in the U.S. and Canada with Dennis H. Harris, M.D.

Snore Formula from Snore Formula, Inc., combines both digestive enzymes and natural herbs to relieve annoying snoring symptoms. This highly unique and effective remedy has had over $12,000,000 in sales over the last three years to satisfied and repeat customers. We offer a 100% satisfaction guarantee or your money back. Scott writes...

Let me take this opportunity to thank you for your wonderful product and tell you how much my wife, Diane, and I appreciate the quiet nights we have enjoyed since discovering it. It's very rare when a product actually delivers what it promises but Snore Formula truly does. We have tried most of the other advertised remedies without any satisfaction and I am very pleased to be able to write and say that this product is as close as you can get to an absolute "Miracle".

Beverly writes...

I can't believe how great your product is. I have been using Snore Formula for over 6 months and it has made a world of difference since I have stopped snoring and I really feel better when I wake up. It is well worth the price that you offer. I almost didn't buy it, now I'm glad I did. Thank you Dr Harris!

A unique combination of all natural herbs and enzymes that gently work together to prevent snoring. Statistics have proven that over 40% of the population or 100 million people in the United States are chronic, regular snorers!

DANGERS OF SNORING:

- Snorers have a markedly higher risk of developing heart attacks, high blood pressure, or strokes.
- Snorers have a 300% higher risk of becoming involved in an automobile accident.
- Snorers have a 400% to 500% higher risk of daytime fatigue.
- Snoring causes sleep apnea, a serious medical condition, in 20% of all chronic snorers.
- 25% of all preadolescent children are chronic snorers, and most of these have some form of sleep apnea, a serious medical condition.
- Snoring causes sleep disturbances that lead to increased anxiety, hyperirritability, decreased memory and poor concentration.

This unique formulation was created by Dennis H. Harris, MD, a recognized medical expert in the field of snoring. Dr. Harris tested this preparation on 220 subjects. Snore Formula Testimonials

Product History...
In 1993, Dr. Harris created and began clinically testing a natural oral remedy to eliminate snoring. With more than 86% good to excellent test results, commercial sales of the product, initially named Snore No More, began in 1995. Sales were undertaken nationally and internationally via direct response radio only. To date, over $12,000,000 in sales have occurred with more than 300,000 bottles sold. The product was recently renamed Dr. Harris' Original Snore Formula, and is presently marketed nationally through radio direct sales via live shows, 30 and 60 second commercials and 30 minute radio infomercial.

Michael writes...
I am having a good nights sleep finally. I used to wake myself up during the night which was a real bummer as I would not always go back to sleep. Sleeping through the night is great. Thanks a lot.
PS: My girlfriend loves it as much or more than I do.

Ann writes...
My husband uses it for another reason. He has a problem with blocked nasal passages. While he's asleep the passages close, he stops breathing and he wakes up gasping. When he takes Snore Formula his nose stays clearer and he's able to sleep more restfully.

Thank you for a product that helps!

Lonny writes...
The main thing I have noticed is I sleep better. No more multiple wake-ups due to breathing difficulty.

Lee writes...
For years the snoring on the other side of the bed had gotten louder and more often. It had become almost unbearable. With the use of Snore Formula there has been an enormous improvement. What snoring has continued is much, much lighter and much, much softer. There are many, many periods of no snoring at all.

Shirley writes...
I used to snore and snort so loud I would wake myself up. I haven't done that lately. I think one of the best things about taking Snore Formula is the lack of sinus drainage in the morning. I used to hack and spit for the first hour of each day. As my granddaughter, Brittany, tells me it was "gross and disgusting"! She's seven.

Whatever Snore Formula does or however it works, I am grateful that I have discovered it exists. My son-in-law told me about it.

Gregory writes...
In February 1995, I was diagnosed with severe sleep apnea. A CPAP was the suggested treatment for my affliction, but it did not help my condition. I heard your advertisement and ordered a bottle of Snore Formula and my sleep improved immediately. I continue to use it and my sleep has been better than it had been in years. Thanks.
Chloe writes...
The reason I looked into Snore Formula is because my husband used to keep me up at nights with his snoring. So I said I would give it a try and it works! I was so happy. If Snore Formula could work for him it could work for anyone. Thank you very much.

Scott writes...
Let me take this opportunity to thank you for your wonderful product and tell you how much my wife, diane, and I appreciate the quiet nights we have enjoyed since discovering it. HOW SNORE FORMULA WORKS:

The unique combination of natural enzymes metabolizes the secretions, allowing the body to absorb them. The herbs reduce the tissue swelling. The result is to open the airway, smooth out the airflow and eliminate the snoring.

This unique formulation was created by Dennis H. Harris, MD, a recognized medical expert in the field of snoring. Dr. Harris tested this preparation on 220 subjects. Amazingly, 86% of those using this formulation had good to excellent results. Good Housekeeping magazine also performed an independent study that demonstrated a marked improvement in the vast majority of users. Over 150,000 people have used the product over the past 36 months with good results.
Dennis H. Harris, M.D.

Biography

Dr. Harris graduated from Ohio State University Medical School in 1963 and completed his internship at Grant Hospital, a University affiliated hospital in Columbus, Ohio in 1964. He then entered a residency training program, specializing in Physical Medicine and Rehabilitation at Ohio State University. Upon completion, he moved to Dallas, Texas in 1966 to become chief resident in a Physical Medicine residency program at Parkland Hospital, Southwestern Medical School, University of Texas. He completed the last year of his residency in 1967 and moved to Scottsdale, Arizona to begin private practice.

In 1968, Dr. Harris established the Department of Physical Medicine and Rehabilitation at Scottsdale Memorial Hospital in Scottsdale, Arizona and was appointed Director of that department which he operated until 1984. Dr. Harris then established the Southwest Pain Control Program and directed that program through 1974. This program was the first chronic pain control program in the Southwest, the eighth program in the country, and the first program to be performed on only an outpatient basis. After the efficacy of the program was well established, the entire program was moved to Mesa Lutheran Hospital in 1974 at the hospital's request. The hospital appointed Dr. Harris as Director of that program, and he maintained this position through 1983.

Dr. Harris subsequently maintained a practice devoted primarily to the non surgical diagnosis and treatment of all conditions of pain. Due to the nature of that practice, many of Dr. Harris's patients were medico legal in nature, having been involved in automobile accidents or work-related accidents. This has enabled Dr. Harris to testify in hundreds of depositions and make countless court appearances as an expert medical witness.

Professionally, Dr. Harris has been continually involved in lecturing and teaching, often lecturing groups of hundreds of physicians or physical therapists. He has presented several papers at national meetings and appeared before large medical audiences during that time.

While in residency at Ohio State University, Dr. Harris became the co-inventor of a gel pad to prevent bed sores, negotiated a licensing agreement with The Stryker Corporation, and subsequently traveled the country, presenting the product at hospital meetings and medical gatherings. During that time, he designed the national sales and marketing program for The Stryker Corporation with regard to that product, and he then trained the national and international sales staff of The Stryker Corporation prior to the introduction of the product.

During the course of his practice, Dr. Harris recognized the benefits of alternative medicine. HarGen Distributing, Inc. was formed to manufacture and distribute natural crystal deodorant products worldwide. Dr. Harris designed, trademarked and patented multiple improvements and new products within the industry.

In 1993, Dr. Harris created and began clinically testing a natural oral remedy to eliminate snoring. With more than 86 % good to excellent test results, commercial sales of the product, initially named Snore No More, began in 1995. Sales were undertaken nationally and internationally via direct response radio only. To date, over $12,000,000 in sales have occurred with more than 150,000 regular users and over 300,000 bottles sold. The product was recently renamed Dr. Harris' Original Snore Formula, and is presently marketed nationally through radio direct sales via live shows, 30 and 60 second commercials and 30 minute radio informercials.

In 1994, after clarifying the link between snoring, allergies, sinusitis and asthmatic bronchitis, Dr. Harris created and began testing a natural formulation for relief for allergy and sinus symptoms. 83% good to excellent test
results have been obtained. Marketing of this product under the name Dr. Harris' Original Allergy Formula began nationally during the 1st quarter of 1998. Presently, Dr. Harris continues an active research and development program designed to improve the existing products and create new products to effectively help and extend our lives. Dr. Harris has appeared on over 1,500 local and network radio shows and continues to be one of the most popular and sought-after radio guests.
