- Zero VOCs’ flow odor
- GREENGUARD Indoor Air Quality Certified’ Product
- Limited Lifetime Warranty

The color of your room should turn heads. Not the odor.

How does it work?
Refresh paint contains proven odor eliminating technology. Through natural airflow, the odor vapor molecules come in contact with the walls and are not seen and heard within the paint film. Scrubbing the painted surface will not release the odors.

The paint with low environmental impact.
The Dutch Boy Group is committed to lessening the impact we have on our environment. That's why we created Refresh paint, the first top-quality paint with Arm & Hammer Odor Eliminating Technology and Zero VOCs— which means you can also enjoy your room immediately after painting.

Did you know… VOC stands for “Volatile organic compounds.” These are vapors released from paint as it dries and are thought to contribute to smog and poor air quality. Refresh paint is formulated without VOCs— one step closer to having less environmental impact.

Beautiful colors available in every shade of „green.“
You want products that minimize the impact on the environment. And you want to trust that the products have been approved by a credible party. That's why the GREENGUARD Environmental Institute comes in. An industry independent third-party program, it ensures the product is tested to exceed acceptable indoor air standards and it is recognized by architects, designers, purchasing organizations and consumers.

Dutch Boy Refresh has been tested and certified by GREENGUARD.
