In the Matter of:        
Public Forum on Vehicle  ) Matter No. P964402
Buyback Disclosures     )
------------------------)

Thursday, October 3, 1996
Room 432
Federal Trade Commission
6th Street and Pennsylvania Avenue
Washington, D.C.  20580

The above -entitled matter came on for public
hearing, pursuant to notice, at 9:30 a.m.

APPEARANCES:

ON BEHALF OF THE FEDERAL TRADE COMMISSION:

For The Record, Inc.,  Waldorf, Maryland  (301) 870 -8025
EILEEN HARRINGTON, MODERATOR

CAROLE DANIELSON

ALLEN HILE

JOSEPH MULHOLLAND

ADAM COHN

PANELISTS AT PUBLIC FORUM ON VEHICLE BUYBACK DISCLOSURES:

LORI COHEN, AMERICAN ASSOCIATION OF MOTOR VEHICLE
ADMINISTRATORS (AAMVA)

JOHN T. WHATLEY, ASSOCIATION OF INTERNATIONAL AUTOMOBILE
MANUFACTURERS, INC. (AIAM)

RICHARD RAINES and MARGARET SCHWARTZ, CARFAX

ROBERT GRAHAM, CENTER FOR AUTO SAFETY

LEWIS GOLDFARB and JACQUELINE GLASSMAN, CHRYSLER CORPORATION

JACK GILLIS, CONSUMER FEDERATION OF AMERICA (CFA)

ROSEMARY SHAHAN and LAWRENCE KANTER, CONSUMERS FOR AUTO
RELIABILITY AND SAFETY (CARS)

JANET L. SMITH, FLORIDA ATTORNEY GENERAL'S OFFICE

GERALD DUCHARME and PEGGY BOWERS, FORD MOTOR COMPANY

GEORGE VELEZ, GENERAL MOTORS CORPORATION

PETER L. MAIER, MAIER & SEVERANCE, P.C.

EVAN JOHNSON, MONTGOMERY COUNTY, MARYLAND DIVISION OF
CONSUMER AFFAIRS

STEVEN A. TATERKA, NATIONAL ASSOCIATION OF CONSUMER
ADVOCATES (NACA)

For The Record, Inc., Waldorf, Maryland (301) 870-8025
BERTA PHELPS, NATIONAL AUTO AUCTION ASSOCIATION (NAAA)

J. PETER KITZMILLER, NATIONAL AUTOMOBILE DEALERS ASSOCIATION (NADA)

R. B. GRISHAM, NATIONAL INDEPENDENT AUTOMOBILE DEALERS ASSOCIATION (NIADA)

PHILIP R. NOWICKI, P. R. NOWICKI & CO.

EDWARD MIERZWINSKI, NATIONAL OFFICE OF SAFETY PUBLIC INTEREST RESEARCH GROUPS (USPIRG)

For The Record, Inc., Waldorf, Maryland (301) 870-8025
MS. HARRINGTON: My name is Eileen Harrington, and I will be moderating our discussion today. I want to, before we have introductions, go over the ground rules. But first I'd like to thank all of you for coming, and particularly those of you who have filed comments on this issue. We have read them all.

I hope that those of you sitting around the table have read the comments of the other round table participants. That's one of the ground rules. But we found much in the comments to educate us and certainly to help us frame the issues which you see laid out on our discussion agenda.

These are the items that the staff of the Commission would very much like to hear you discuss among yourselves and with us today. Let me make a couple of prefatory statements and disclosures.

First of all, this workshop is being conducted by the staff of the Commission. And nothing that we say today reflects necessarily the views of the Commission or any individual commissioner. However, we expect that everything that you say will reflect the views of your organization.

(Laughter.)

MS. HARRINGTON: The format for today's meeting is a discussion format. We have found in a whole variety in
contexts in the past few years that our thinking is aided
greatly by discussion among people who have a stake in
whatever issue it is that we have under consideration.

So today, a great premium will be placed on
participants talking to one another. Conversely, if you
repeat your comment, your written comment, we might not call
on you again.

I am the product of twelve years of Catholic
education. And I, therefore, had ample opportunity to study
at an early age how you keep order and impose discipline.
And I have facilitated a number of these sessions and
displayed what I learned at an early age and will today.

If you want to be recognized, participants, what you
need to do is take, you will notice that at each one's place
you have these little stickies, post-its. Stick one on your
name plaque like this (indicating).

And I will be making note of who seeks recognition
in the order that I see them. And generally I will call on
you in the order of your sticky unless I decide that I want
to call on someone else.

(Laughter.)

MS. HARRINGTON: And the reason that I will call on
someone else is because the last time I called on you, you
simply rehashed your comment and you didn't talk to what,
you didn't participate in a way that was responsive to the
conversation that's going on.

This really is intended as an opportunity for all of us to talk to one another about the issues that are raised by this larger question of whether there is in fact a problem with the information that consumers receive or don't receive about vehicles that they purchase which had previously been the subject of a buyback.

That's what we want to talk about. So, please, let me encourage you to talk to one another and not to us. We have, trust me, we have all, the staff of the Commission here and others, read your comments so we know what's in them, what you've said, what you think; and we are looking to move the dialogue forward I think today.

Now let me give you a little bit of housekeeping information. We have a message board out in the foyer. And if people want to call in and leave messages for you, they may do that, although I have no idea how they may do that. Do we have a phone number?

MS. DANIELSON: It was on that general information sheet.

MS. HARRINGTON: On that general information sheet that you received there was a phone number that you could leave with your offices. And do we know what that number is?

UNIDENTIFIED PERSON: 326 -3238.
MS. HARRINGTON: 326-3238. 326-3238. Oh, that's Jody Bernstein's office. She's on vacation this week.

(Laughter.)

MS. HARRINGTON: Second, there are restrooms on this floor near the elevators; just look around. And third, if you need to make a phone call, there are two telephones outside this room.

One is right in the ante room and the other is in the sort of storage room off of it. If you're making a local call, dial nine. If you're making a long distance call, use a credit card, please. Are there any other housekeeping details?

(No response.)

MS. HARRINGTON: All right. Well, we're going to stick very rigorously to this agenda. What I would like to ask the participants at the table to do before we get into the, discussing the first question is to introduce yourself, say who you're with, and in one sentence, it can be a sentence of a lot of words I suppose, but in one sentence I'd like you to say what you hope to get out of this discussion today.

Now, because those of you at the table are just hearing this for the first time, maybe we'll start with someone from the FTC staff.

Let me start with Joe Mulholland from our Bureau of For The Record, Inc., Waldorf, Maryland (301) 870-8025
Economics. Joe, do you want to introduce yourself and say
in one sentence what you hope to get out of today?

MR. MULHOLLAND: Hi. I'm Joe Mulholland. I'm an
economist. And I'd just like to learn more about what the
process is, what are the problems and how, what's the best
remedy we can do for them.

MS. HARRINGTON: Now, we have a stenographer who is
transcribing this discussion. And I'd like to ask everyone
before you speak to please identify yourself for her; it
will make her job easier.

Also, if the people who are seated along this front
row could turn their name plaques in some way so that I
could see your names. It's these folks (indicating).

Peter, thank you, that would be very good. That's
helpful. If you'd just tip them a little now. Or you might
want to tip them the other -- I don't know.

Can the people over there see the names of the
people over here now? Do you all know each other?

(Laughter.)

MS. HARRINGTON: Okay. Anyway, if you could just
tip them a little bit. Thank you. Phil, why don't we start
over with you now.

MR. NOWICKI: I'm Philip Nowicki. I have my own
automotive research company. And I hope to learn something
today. I hope to contribute today. And I just see this as

For The Record, Inc., Waldorf, Maryland (301) 870-8025
a great opportunity here to bring all the parties together
to try and have some resolution on this issue.

MS. HARRINGTON: Okay. Rosemary.

MS. SHAHAN: Rosemay Shahan, President of Consumers
for Auto Reliability and Safety. And I'm hoping to find
where there are areas of common ground, wherever they are,
and to find out where there are areas of disagreements and
get a sense of how we can address the areas of disagreement.

MS. HARRINGTON: Evan.

MR. JOHNSON: Evan Johnson with Montgomery County
Consumer Affairs. I'm encouraged in reading the comments,
and I think there is a fair amount of common ground among
interests that in past issues I have been involved with
aren't usually this apparent. So I'm looking forward to a
productive discussion also.

MS. HARRINGTON: Okay. We need people to use
microphones if you want to be heard, please. There are
microphones all around the table. Thanks. Janet.

MS. SMITH: I'm Janet Smith, with the Florida
Attorney General's Office. And I suppose like everyone else
I'm looking for a productive discussion and to learn
something about what some of the other companies and other
people think about these problems.

Our state law is such that we could use a little
assistance in learning in the area. And I'm hoping that

For The Record, Inc., Waldorf, Maryland (301) 870-8025
today we will come to some meaningful result.

MS. HARRINGTON: Mr. Ducharme.

MR. DUCHARME: My name is Gerry Ducharme. I'm a lawyer with --

MS. HARRINGTON: Would you do me a favor and use the microphone?

MR. DUCHARME: Sure.

MS. HARRINGTON: We've got people on headsets in the back and also downstairs listening. Thanks.

MR. DUCHARME: How's that? My name is Gerry Ducharme. I'm a lawyer with Ford Motor Company. I'm looking forward today to have a candid exchange of views. And if we find that there are some areas that we can improve and the industry can improve, I'm all ears and anxious to talk about improvements.

MS. HARRINGTON: Thank you. Ed.

MR. MIERZWINSKI: Ed Mierzwinski, with the National Office of Safety Public Interest Research Groups. And we are hoping that we can help to find out and identify ways to improve the problems that consumers face when they have lemon law cars.

MR. GRAHAM: I'm Robert Graham, and I'm staff attorney with the Center for Auto Safety. And I, like Evan, notice that there is a lot of common ground in the comments. I just hope that the devils that are in the details are not
too large.

MR. GOLDFARB: My name is Lou Goldfarb, with Chrysler Corporation. I'm hopeful that this will be a constructive, productive discussion that may allow us to shed some light on ways that we can deal with some of the contradictions and inconsistencies among the various state laws that may be getting in the way of, I don't know, some type of disclosures getting out to consumers.

MR. RAINES: I'm Dick Raines. I'm president of Carfax. We are a vehicle history business. And I'm just here to see whether there might be ways we can help address the problem as a business.

MS. COHEN: My name is Lori Cohen. I am with the American Association of Motor Vehicle Administrators. And our association facilitates uniformity among the Departments of Motor Vehicle. And that's part of what we're seeking about manufactured buybacks.

MR. DOWDY: I'm Lemuel Dowdy in the Division of Enforcement of the Bureau of Consumer Protection. That division enforces the Commission's used car rules, the rules that require dealers to post the buyers guide on used cars. So I'm interested in discussions about disclosure regulations.

MR. TATERKA: I'm Steve Taterka. I'm here on behalf of the National Association of Consumer Advocates. First
I'm interested in seeing the extent to which everybody agrees that there is a problem. And second of all -- second, of course, the solution to that problem.

MR. WHATLEY: I'm John Whatley, with the Association of International Automobile Manufacturers. I guess we come to this looking, we also sense the great deal of consensus in the comments.

And we were hoping the consensus would move further towards a standard that is clear, simple, and uniform for disclosures.

MR. KITZMILLER: I'm Peter Kitzmiller, with the National Automobile Dealers Association. And I guess what I'm hoping to get out of today is to determine where the problem areas are and try to find some reasonable, consistent ways to deal with these disclosure issues.

MR. VELEZ: George Velez from General Motors Corporation. And I guess some of our colleagues here have already expressed the same hopes I have.

Lou did an excellent job of stating, I think, that what we are looking forward to here is getting some idea of ways to fix some problems that we see out there. But I think you do have a lot of common ground.

MR. GRISHAM: I'm R. B. Grisham. I'm with the National Independent Auto Dealers Association. We're here to contribute and to provide input and to listen and to help
MR. MAIER: Peter Maier. I'm an attorney in private practice in Seattle. I do many lemon law cases. I'm particularly interested in the specifics of how the buyback process works after the buyback occurs.

MS. DANIELSON: Carole Danielson, from the Federal Trade Commission, Division of Marketing Practices. And I too was heartened by the amount of common ground that I saw in the comments that I read.

And I'm hoping that we can build on that and that through the process we have today that we can help the staff here reach a recommendation, a good recommendation for the Commission.

MS. PHELPS: I'm Berta Phelps, and I represent the National Auto Auction Association. And I hope to convey of how our auctions fit into the used car marketing business. And I would also like to learn of how our auctions can aid with the committee to resolve any of the buyback problems.

MR. COHN: My name is Adam Cohn. I'm with the Federal Trade Commission. I'm an attorney with the Division of Marketing Practices.

And I'm in agreement with Carole; I want to learn more about where the areas of agreement and disagreement are among the various parties and to hopefully figure out what
the FTC can do to help facilitate a solution to the problem.

MR. HILE: I'm Allen Hile. I'm the Assistant Director in the Division of Marketing Practices. And I hope that this discussion today will advance beyond what we see in the comments to the point where the staff that you've already met will be able to make a good and sound recommendation to the Commission on how it should deal with the petition that started this proceeding.

MS. HARRINGTON: Well, I've already introduced myself. I'm Eileen Harrington, and I'm the Director of Marketing Practices Division.

And I want to say that something has just happened that gives me a little bit of empathy with all of the people who are in the chain of selling these vehicles with respect to making sure that the right notices get passed along because we screwed up and forgot to print up a name tag for Jack Gillis, but we have just done that and seated him at the table.

And, Jack, we couldn't, we wouldn't dream of having this discussion without you or the CFA. But I apologize. And would you introduce yourself?

MR. GILLIS: Well, my name is Jack Gillis. I'm with the Consumer Federation of America and the author of The Car Book. And my goal here is to resolve this problem as quickly as a name tag was produced for me.
MS. HARRINGTON: Let me just say that the solution here is not that the FTC is going to print and distribute anything.

(Laughter.)

MS. HARRINGTON: We can't even get 25 name tags right, so --

MR. GILLIS: The private sector can do that quite well.

MS. HARRINGTON: Well, thank you very much. Let me also say that for those of you who are here but not seated at the table, there will be an opportunity at four for public participation.

And during that time we would like you and ask you, and we will insist that you please limit your comments to matters that have been discussed today.

Okay. Let's go get to it. We have tried in setting forth this agenda to tell you why it is that we are asking the questions that we are asking.

So the first series of questions that we're asking for some discussion on deal with the definition of a buyback; what is it, what ought to be included in this class of vehicles about which information is needed or should be provided.

What we see in the comments, as we have indicated on

For The Record, Inc., Waldorf, Maryland (301) 870-8025
the agenda, is that there is not complete agreement among the commentors on what it is that defines the vehicles that are in this class, if you will.

And so we'd like some discussion on that. And let me just open it up. How should buyback be defined? What vehicles ought to be in this class, about which there seems to be some agreement that there is additional information required.

(No response.)

MS. HARRINGTON: Well? I'm going to start to call on people if no one is -- Thank you very much, Gerry.

MR. DUCHARME: We talked about this extensively. And very frankly you can, if you look at defining buyback in terms of a process, I think you are going to find yourself with a definition that will not work.

If you define a buyback as a car and a person involved in a certain stage in the lemon law process in a particular state, you won't necessarily encapture the right kind of vehicles that really warrant disclosure.

Because, for instance, someone may be having substantial problems with their vehicle, may be attempting to get into the, this new settlement process board in a particular statement or the lemon law process in a particular state, but low and behold there will be a goodwill, so-called goodwill buyback and the vehicle will be
repurchased by the manufacturer and it will be resold.

Under some definitions that vehicle would not count
as a buyback or not warrant disclosure. Now, that isn't
necessarily right.

What we've been doing, because of the inability I
think to come up with a proper definition, we have been
disclosing every vehicle that we actually do buy back
regardless of whether it's a goodwill or so-called lemon law
vehicle.

So I guess our view is that a definition is an
extremely difficult thing to do. I can't conceive of a
definition that would work.

So the easy way around that is simply to disclose
every vehicle you buy back; and that's what Ford Motor
Company does.

MR. WHATLEY: I think this question, as I read the
comments, was perhaps the most difficult question posed. I
guess I was pleased to see that it was first, although it is
more hard to get your hands around.

In our view this is a complex, the consumer
satisfaction issue is a complex situation. There is a whole
range of activities that manufacturers undertake to make
consumers happy.

At the same time, we as an industry would like to
have a fairly simple standard to deal with so you would have
to balance--this is kind of a schizophrenic process in a
way--you have to balance out the need for clarity and the
need for simplicity against the fact that you've got this
whole range of things that manufacturers do, and you have
humans making these decisions and humans make mistakes.

The result was, in our comments we proposed a
standard that's in a couple of states, Florida and New York,
where if there's been a submission to a state or a
manufacturer program, that triggers these disclosures.

But looking at the other comments, there are other,
there were other standards that are proposed. For instance,
if the lemon law presumption is made. It's not as clear.
It's not as simple.

But it's certainly another place you could trigger
the disclosures. I think when you do that, though, you run
some risk of putting, of doing away with some of the various
things manufacturers may do now to help consumers of the new
car.

And the question is how do you balance out the
benefits to the consumer that buying the repurchased car
against maybe some loss in consumer satisfaction because of
the fewer goodwill efforts in other areas.

And I think there is a number of ways you can go at
that. But our concern is above all that this standard,
whatever it is we come out with, be uniform so that we can
figure out what our responsibilities are.

MS. HARRINGTON: You're suggesting, John, that if
the definition of buyback or if the sort of the net is more
broadly cast, that that may have a chilling effect on
manufacturers' willingness to make goodwill buybacks; is
that what you're saying?

MR. WHATLEY: I'm sure that there's -- and I can --

MS. HARRINGTON: That would be at variance with some
of the other manufacturers.

MR. WHATLEY: I'm not sure that I can quantify that.
But my concern is there are a number of laws. We have
eighteen members. And they do a number of different, they
have a number of different philosophies on how they satisfy
their consumers.

Some do different things than others. I would hate
to sort of make everything homogeneous. I think that would
hurt competition in this area. And there is competition
here in making consumers happy. How much, I can't tell you.

MS. HARRINGTON: Okay. Steve.

MR. TATERKA: I think that the, sort of the
preliminary question, I think the preliminary question that
has to be addressed before even defining buyback is who's
going to apply whatever the criteria are.

And I think that's the biggest problem. Because
obviously consumers and manufacturers are already disagreeing as to whether or not the vehicle was a lemon in the first place.

And so consequently that disagreement is still going to carry over even after there may be a repurchase. So I think that the definition of buyback cannot allow for the type of discretion which is going to continue to reflect those disagreements between consumers and automobile manufacturers.

So consequently I would want all vehicles that are repurchased to be covered under the definition, of repurchase or trade assists, so forth, to be covered, making specific exclusions for the kinds of things -- I know General Motors in some cases has had their guaranteed repurchase programs I think on Saturns and so forth.

And if the vehicle is repurchased within the time frames under whatever the guaranteed repurchase program is advertised, then I think that kind of thing could be excluded. But otherwise I think they should all be included.

MS. HARRINGTON: Lou.

MR. GOLDFARB: Thank you. I mean, I don't want to oversimplify it. But isn't a buyback any time a manufacturer buys back a car? I mean, that's a buyback.

I don't think the issue is really difficult defining.
the buyback. The issue is what do you disclose when you bought back a vehicle, put it through auction and it's being resold?

And, yeah, we're sort of skirting around this question. But the question is, is it a lemon law buyback or is it a buyback fitting into other category?

And I think that's the area of the most contention; when does it qualify as what states define as lemons and when does a vehicle, therefore, have to be called a lemon, designated a lemon, in some states branded as, having your title branded as a lemon.

That's where most of the difficulty comes. I think there is uniform agreement among the manufacturers that when a manufacturer buys a car back it's a buyback.

MS. HARRINGTON: Well, let me --

MR. GOLDFARB: And when we make disclosures --

MS. HARRINGTON: Hold that thought and let me check with John. John, do you people agree with that?

MR. WHATLEY: I think usually that's the case. I'm not sure it's always the case.

MS. HARRINGTON: Do we have any -- Okay. You know, I just want to check to see whether there is agreement among the manufacturers.

MR. WHATLEY: Okay. Well, I think he's, he's hitting the vast majority of the cases. I think there were
some unusual situations where there may not be, for instance, a buyer's remorse, overnight a car comes back that's not under the 30-day return and goodwill program. But, yeah, they're going to check out the car and you may not notice.

MR. GOLDFARB: Some manufacturers have programs where they actually let you keep the car for 30 days. And if you don't like it for whatever reason, you don't even have to give the reason, you can have it bought back. Maybe that category would not be included. And that's rare. By and large -- John is speaking for 18 manufacturers; that's a little more difficult. But by and large, whenever that vehicle is bought back there is a disclosure made.

And the question really is, the area of dispute I think is what is disclosed and does this vehicle have to be designated a lemon?

MS. HARRINGTON: Well, before we get to that issue, which is later on the agenda, I really want to try to hone in as much as I can on what you're saying and where the agreement is. Would you include trade assists?

MR. GOLDFARB: Well, trade assists are not bought back by the manufacturer.

MS. HARRINGTON: But they're bought back.

MR. GOLDFARB: Well, the manufacturer does not take
them back and run them through the auction. I mean, and manufacturers have different definitions of what a trade assist is.

Some use different terminology. But in our case, the case of Chrysler, we will assist a dealer in bringing a car back that a customer is unhappy with very early on, very early on in the process for whatever reason.

MS. HARRINGTON: What's the problem with including trade assists in the definition of buybacks?

MR. GOLDFARB: I think, I think we do make disclosures that a vehicle has been sent back by the consumer and the reasons for the sending it back. Again, the vehicle never gets resold unless whatever was complained about gets repaired, if there is that kind of problem.

But trade assists covers a whole range of issues that people raise that don't rise to the level of a mechanical problem with the vehicle, necessarily. Some do. But, I mean, in many cases it goes beyond that.

MS. HARRINGTON: Now, Steve, does the 30-day you-get-to-bring-it-back deal fall under your satisfaction guarantee exception?

MR. TATERKA: Yes. Yes, it would, sure. Yeah.

MS. HARRINGTON: Okay. So we seem to have some agreement there.

MR. TATERKA: Right.
MS. HARRINGTON: Lou, do you want to say anything else? I've been sort of putting you on the spot, but that's because you used to work here.

(Laughter.)

MR. GOLDFARB: If the lemon law issues are going to come up later, fine. But I mean I really think that --

MS. HARRINGTON: Yeah. Oh, no, it will.

MR. GOLDFARB: --that's where most of the difference in point of view comes when that has to be done.

MS. HARRINGTON: Okay. Evan and then Jack.

MR. JOHNSON: My perception when I sent the, I thought there was a lot of common ground. Actually I thought a lot of the common ground was on this issue. And maybe we need to be flexible in the agenda.

Because I hear, I think I hear the consumer regulatory side and Ford and General Motors in their comments and now Chrysler being pretty close on this issue. I mean, that's highly unusual.

MS. HARRINGTON: Well, we're going to test it in just a minute.

MR. JOHNSON: Okay. In terms of how you say and categorize vehicles on which some kind of disclosure is appropriate, then maybe the issue is the disclosure.

I think it's worth visiting here the terms. And I'd like to say for purposes of the audience, obviously, to try
and clarify some terms because people use them differently out there.

One is the term buyback. Sometimes people use that to mean a case just when a car is repurchased in cash. I think we are using that broader here to include so-called replacement. So we need to be clear.

I knew a very good consumer advocate who was completing a term of three years on her local Ford board here and she thought she was buying back cars that was determined in use, but at the time the board was only replacing the cars, not buying back.

And at the end of her term she finally realized that people weren't getting cash back for those cars. And Ford has since cleaned up their terminology and they are in fact repurchasing cars in that program, also I must add.

But that's why terms are important and we need to know what we're talking about. Trade assist is a term that Lou says manufacturers have different definitions of, and I want to hear it.

Because trade assist can mean several things, one of which, a placement transaction might be viewed as a trade assist.

I call replacement a situation where a manufacturer may say, consumer, okay, we'll take back your car to a dealer and maybe you paid for an upgrade in a cost of a new
vehicle that's more expensive than what your old one was and maybe you paid something for mileage, that's a replacement type transaction.

But sometimes trade assist is applied to that. And I can tell you when the paperwork is done, it's hard to see that that was a full replacement transaction sometimes.

The other term that might include trade assist is the policy of so-called certificates. A manufacturer, instead of working on a particular deal on an entire transaction will say, okay, consumer, we'll give you a certificate good for usually in the thousands toward the purchase of another vehicle of our make.

And you cut your best deal. It can be at the dealer you have been dealing with or someone else. And you may not even trade in your old car; you may get rid of it in some other way. But, I mean, that's a trade assist also.

Now what happens with those vehicles? I guess my thinking is, I mean, if a vehicle in which a certificate is given is traded in to a dealer of that vehicle manufacturer's make, then disclosures is appropriate there also. But I think we can talk about the terms a little more.

MS. HARRINGTON: Jack.

MR. GILLIS: That's essentially, I was just going to ask Lou what -- could you define trade assists? That's --
MR. GOLDFARB: A trade assist is a situation where we become aware because a customer is complaining to our customer relations office that that customer is unhappy with the vehicle for whatever reason.

Sometimes it's a mechanical problem and the dealer makes an effort to fix it. Sometimes it's buyers' remorse. Sometimes it's the noise of the transmission. Sometimes the person bought a truck and didn't realize what it was like to drive a truck.

But they're real unhappy and the dealer wants to do something for this customer. We want to do something for the customer. We will basically provide some amount of money to enable that customer to buy another Chrysler product.

Now, the vehicle they turn in becomes a used vehicle immediately, okay, so we then have to dispose of that vehicle. And my understanding is we make disclosures even in those situations of the history of that vehicle, what was complained about, what was repaired.

And those vehicles are put back on the market as used vehicles. But we basically provide some amount of funds to enable that new transaction to take place, the sale of another car.

MR. GILLIS: But the consumer is on his own in terms of trading in the problem car?
MR. GOLDFARB: Yeah, well, the consumer --

MR. GILLIS: Or is that contingent; you'll give me
the money if I give you the car?

MR. GOLDFARB: Well, I mean, we don't give them the
full price of the car. What happens is a negotiation takes
place between the consumer and the dealer to buy another
car.

And we will make up the difference in lost value
because the car they're bringing back is a used car. And we
will, you know, basically satisfy that customer with a car
that's more to that person's liking than the one they drove
out of the dealership with.

MR. GILLIS: But you in effect buy back their
vehicle.

MR. GOLDFARB: Well, the vehicle comes back to the
dealer; it does not come back to Chrysler. So it's a
completely different process.

MS. HARRINGTON: But, if I understand you correctly,
you don't have a problem with the notion that the class of
repurchased vehicles for purposes of this discussion
includes the vehicles that are bought back by the dealer or
taken back by the dealer rather than the manufacturer.

MR. GOLDFARB: No, I don't have a problem with that.

MS. HARRINGTON: And I'd like to, Phil, before we
call on you, I just want to, I want to check to see around

For The Record, Inc., Waldorf, Maryland (301) 870 -8025
the table whether there is any disagreement on the notion
that the class of vehicles that we are discussing here
includes vehicles that are taken back by the dealer as well
as vehicles that are taken back by the manufacturer.

Is there any disagreement on that? Could I just see
a show of hands?

Disagreement on that; Gerry, George, John. Well, we
are going to talk more about that in just a minute then.
And for you three I'm going to call on you and ask you why,
you know, what your concerns are there. But let's go first
to Phil.

MR. NOWICKI: With you raising that question, I'd
like you to ask then the question you were going to ask
because it may be relevant.

MS. HARRINGTON: You may ask it.

MR. NOWICKI: Well, just the question you had said
as far as is there any difference with dealers and
manufacturers in terms of the vehicles that are taken back.
I'd be interested in what they were going to say before I
say what I was going to say.

MS. HARRINGTON: Okay. Well, then, we'll come back
to you, Phil.

Gerry?

MR. DUCHARME: We use certificates from time to time
for customer satisfaction purposes. And most times because
we have instructions to our field personnel not to use certificates for cars that are, and again we get into a definitional issue here, but cars that are lemon law eligible, our field personnel are informed they are not to use what we call certificates for the consumers.

MS. HARRINGTON: Well, what are these certificates?

MR. DUCHARME: Basically they're negotiated with the customer who is unhappy for a series of reasons. And I'm looking for some examples of the reasons. They're good for an amount of money on the purchase of a new vehicle.

Now, some, some consumers may well keep the vehicle they have and use a certificate to buy another vehicle for their spouse or their child. A certificate doesn't have to be used for the specific vehicle for which it was granted.

Now, they're used for a number of purposes. Somebody may well buy an Explorer and expect to tow their cabin cruiser around with it, and low and behold they discover it just isn't capable of doing that.

We have a number of people who have their vehicle out of warranty, they have an expensive repair that they have to have on the vehicle, it's just out of warranty; so as a matter of goodwill we say, look it, you don't want to have the repair.

Maybe you want to trade it in and here's a certificate for a thousand dollars against a new car. We
use it quite often in those kinds of situations. We also use it in situations where people for some reason or other just lose confidence in the vehicle, if it stalls and the like a couple of times.

MS. HARRINGTON: Gerry, let me interrupt for a minute. That's all fine. But what we're really talking about here is what happens to the vehicle that they have when the dealer takes it back.

MR. DUCHARMEE: The vehicle that they have is not considered by us as a buyback, by Ford Motor Company. The dealer is, takes a trade-in just as a dealer takes a trade-in on any other vehicle at the dealership. It's either sold by the dealer on his used car lot or the dealer wholesales it elsewhere as a used car. It's treated just as any other trade-in.

MS. HARRINGTON: What's the problem with treating it differently? What's your problem with that?

MR. DUCHARMEE: My problem is that there is no basis to treat it any differently than a regular trade-in. There is nothing wrong with these vehicles. They are just a trade-in car.

MS. HARRINGTON: So your assumption is that the vehicles that are in the buyback class have something wrong with them?

MR. DUCHARMEE: My assumption is that the vehicles in
the buyback, you know, class don't always have things wrong
with them. But as a matter of degree, let's say, there is
more of a chance that something is wrong with them than, of
course, there is with a certificate card.

If we have a lot of cars in the buyback category,
they are purely goodwill. If someone is so upset with
certain aspects of the vehicle and if they are a long-term
customer of the company, they own a lot of vehicles, the
family owns a lot of vehicles, we may well bend over
backwards and buy back their car, where another person in
the same situation we would give a certificate.

What I'm saying is that it's customer specific not
vehicle specific. In other words, we do this for the
goodwill of the customer. It isn't necessarily related to
the particular condition of the vehicle. And that's the big
difference.

MS. HARRINGTON: I'm not seeing the difference sort
of conceptually between a goodwill buyback that the
manufacturer makes and a goodwill buyback that the
manufacturer or the dealer participates in.

MR. DUCHARME: Well, it's not a --

MS. HARRINGTON: That isn't a buyback I guess in
your mind. I'm not -- Because if the assumption isn't that
there is something wrong with the car that's bought back,
then what's the difference?
MR. DUCHARME: Well, the point is many times with certificates, they are issued on the basis of who the consumer is and the degree of loyalty that we want to maintain with the consumer.

The certificate isn't necessarily issued because of a particular problem in a car that we think is a concern. That's the major difference.

When you get into the goodwill area and when you get into the so-called lemon law area, then you move from the customer-specific kind of action that you're taking to preserve loyalty into the let's-fix-a-problem-with-your-car category.

And there is vast difference between the two and I think a vast difference between how a manufacturer ought to react in the two situations. There is a lot of gray between the two.

And the gray, as I would say, I would think in the area of the goodwill car, if you can define a car as such, I think it's pretty black and white. And the certificate, it gets gray in the goodwill, and again it gets very, very clear in the so-called lemon law eligible vehicle. So it moves from customer specific to vehicle specific with a gray area in between.

MS. HARRINGTON: Okay. George.

MR. VELEZ: Yeah, let me take a shot at that because
we've got the same problem they do. We have the
certificate. And the problem is we don't get the car back;
it isn't a buyback. There is no obligation to trade that
car in, so consumers often will buy a second car; they'll
trade in a different car. And so --

MS. HARRINGTON: Do you have any idea how often in
these certificate situations the dealer takes back the car?

MR. VELEZ: I don't know that because, again, you'd
have to get that, that comes under the dealers' statistics.

MS. HARRINGTON: You don't do that?

MR. VELEZ: We don't, we don't do that, no. The
other, with a straight trade assist with the dealer where we
participate financially, again we don't buy back the
vehicle; the dealer does.

We don't have a problem disclosing. In fact, we
give the dealer our disclosure documents and encourage him
to disclose. But we lose control over that vehicle. We're
never in the chain of title.

The dealer has that and it's really up to him to be,
to disclose. The third situation I think where it gets a
little screwy is in lawsuits, for example, the consumer is
absolutely convinced, he'd go and then we'd disagree, sues
us over it; we settle that for cash.

That vehicle will go on for -- he'll keep the car,
perfectly happy with the car, and who knows what's going to
happen to the car. We have, we certainly have no control over it, don't know when it's going to get traded in, if he's going to get rid of it, if it's going to get sold to another consumer. We don't know that.

MS. HARRINGTON: Lori.

MS. COHEN: If Motor Vehicle Administrators are disclosing on a title, say, or on a brand, something is in a manufacturers' buyback status, to brand something, there is an implication there is safety issues, there is a devalue issue.

And it seems that if it's important enough to disclose, there would be a safety or value issue, not that somebody took it back because there wasn't enough trunk space. I would think you would want to have the definition of a safety or value implication and not call it buyback.

MS. HARRINGTON: Phil.

MR. NOWICKI: Yeah, well, there's a lot of gray areas. We had looked at about several thousand of settlements, both from our own program and from the manufacturers' programs.

And they generally fall on a whole range of categories people who get the complete, as a settlement, the refund that they would be entitled to under the lemon law. This is for the Florida Attorney General's Office, by the way, for people in the audience.
Replacement vehicles where it is really a swap in accordance to the lemon law. And then it goes down a little bit where we look at something in the form of trade assists where it looks like some money was offered by the manufacturer to help the consumer get out of the car; partial refunds, if you will, where they don't give them everything they're entitled to under the lemon law.

Maybe they bill them for their entire mileage or they don't give them their interest. And then you get into buyer certificates that are used. You get into, as was mentioned, some people take straight cash and keep the car.

You get into some people accepting repairs or extended warranties. When we approach these, though, we also look at the buyer certificates that were used and try to identify how many times we saw that as a settlement and how many times that was actually used by the consumer and some evidence that the consumer did return the car.

And particularly with the manufacturers' programs, they have to keep that information under Rule 703. I'd say at least 90 percent of the time when we did see evidence of a certificate we were able to find, to the extent it was in the file, some evidence of what actually happened, that indeed it was used to purchase another vehicle of that make.

I would say the other issue that--again, it's drawing those lines on the use of buyer certificates; and
again this was primarily the three domestic manufacturers so I can't speak for each one specifically--but in general, between those things that were trade assists or buyer certificates or other types of partial refunds, to us it looked more like a product of what the consumer was willing to accept as a settlement, not so much as the condition of the car.

So, you know, as far as what we could tell in looking at buyer certificates, the nonconformity, how many times that it infects or how many days out of service, compared to trade assists or partial refunds we did not see a big difference.

MS. HARRINGTON: John.

MR. WHATLEY: I'm not sure what all 18 of my members do. Some of them I think would agree with Lou. I think some would agree with Gerry.

There is another way to look at it, too, though, and that is what is a disclosable buyback under current law? And a number of our companies try to draw that line. The problem is you have a number of different jurisdictions and a number of different definitions and it's difficult to say. Some companies adopt the policy that they disclose the car, in our judgment it beats the lemon law presumption in whatever state it's bought back in. And that's, that is a little -- that's a lot gray.
What you do if you have that policy is you try to make certain you overdisclose. So if you buy it back for paint or for color of paint, not necessarily a paint defect, you don't disclose that because it wouldn't be a, it wouldn't be a substantial defect in best use, value, and safety.

But if it's something that breaks, maybe you do.

There are other ways to sort of make this definition if you kind of look at it in terms of what's out there now. And part of the problem we have is there are so many different regimes, so many different definitions, it's hard to know what to do from state to state.

MS. HARRINGTON: Rosemary.

MS. SHAHAN: I start off by saying that we were pleased to see in the comments, I see around this table, I feel like I'm hearing, anyways, more movement than there was in the comments.

But I'm concerned about Gerry's comment regarding a vehicle that's returned after it stalled a couple of times and the consumer has lost confidence in the vehicle.

And one of the biggest problems we're concerned with is when there is an intermittent defect like that and consumers maybe have been scared because it stalls in traffic; and they have reason to be concerned about it.

And we don't want vehicles with a condition that is
a serious condition to not have full disclosure on them.

Our major concern is --

MS. HARRINGTON: What would you disclose, though, Rosemary? Tell me, tell me what that disclosure should be.

MS. SHAHAN: That it had a history of stalling, and -- or at least the consumer alleges that it has a condition. One of the biggest problem areas --

MS. HARRINGTON: Could the disclosure include -- I want to, may I press on this a little bit?

MS. SHAHAN: Okay, sure.

MS. HARRINGTON: Let's say that the disclosure is consumer alleges vehicle stalls in traffic. Would there be room on that disclosure for some comment from the manufacturer as well? Manufacturer says --

MS. SHAHAN: Figment of their imagination.

(Laughter.)

MR. GILLIS: Couldn't find the problem.

MS. HARRINGTON: Well, that doesn't seem to be a particularly marketable claim.

MS. SHAHAN: Well, nothing to say it's normal.

Stalling in traffic isn't normal.

MS. HARRINGTON: No. But, I mean, if the disclosure was, you know, you know, car returned, you know, car bought back, you know, consumer says stalls in traffic.

MS. SHAHAN: Unable to diagnosis maybe.
MS. HARRINGTON: Manufacturer says, you know, problem is fixed or manufacturer says can't find the problem or manufacturer says there isn't a problem and the car is under warranty or something like that. Would that be acceptable?

MS. SHAHAN: Possibly. I think one of the concerns we have regarding disclosure is the implication that a problem has been fixed when it simply hasn't been adequately diagnosed. And we've run into this.

The implication is, you know, this was the problem. And especially if there is no indication that it was a repeated problem; a consumer would want to know, did this happen only once or did it just happen and it was returned for this 12 times?

I think there is a difference, and people would want to know that. And if the implication is that it's been repaired, that's kind of tricky, too.

Because sometimes with an intermittent problem it may appear to have been repaired but then, you know, it reoccurs under certain climactic conditions or a certain altitude again. Maybe it just wasn't tested adequately.

MR. GILLIS: I'm still going back to your original question. I'm a little confused. The auto manufacturer, are you saying that a buyback would apply to you but not
MS. HARRINGTON: George? He's making significant eye contact with you.

(Laughter.)

MR. GILLIS: Or the NADA guy. I mean, I'd like to know what NADA is, where you guys are on this.

MR. VELEZ: No. I think the common perception is that buybacks apply only to manufacturers. I'm not taking issue with would it should apply to or that it does or it doesn't.

I'm just saying if you are looking to us and asking us to define a buyback in terms of what we buy back, which is the simplest definition, we don't buy those vehicles back. And so for those classes of vehicles you're going to have to look to someone else is all I'm suggesting.

MR. GILLIS: Okay. But they could be called buybacks as well, just because the dealer buys it back and not you.

MR. VELEZ: If someone buys it back, I think you can call it a buyback.

MS. HARRINGTON: Peter.

MR. KITZMILLER: Well, I think from our perspective with regard to trade assists, and again different manufacturers do different things with trade assists. We've heard about the coupons and sometime -- I mean, what I would
call a normal trade assist situation is where we have a
customer who is unhappy with a vehicle for a particular
reason and we go to the manufacturer.

And between the dealer and the manufacturer we give
the person financial assistance and we trade them out of
that vehicle. I don't think from NADA's perspective we have
any problem in disclosing the fact that this was a trade
assist vehicle to the customer necessarily.

I think in our comments our concern was that again,
we talked about defining these terms, are we going to have
to disclose with the same language a trade assist which
someone traded a car in because they bought an Explorer and
they never had a sport utility vehicle before and they
weren't prepared for the fact that it drove like a truck
with the same terminology that someone bought the car back
because there was a problem with the brakes.

Are we just going to call that a buyback? I think
we have some concern with that. But from our perspective,
as long as we have some clear criteria that trade assists
need to be disclosed, you know, and as long as we can factor
that into the manufacture when we're figuring out
financially what it's going to cost to buy, to get this
customer in a different vehicle, I don't think we have a
problem with that.

Again I think, and some other people have raised
this, I think that there has got to be some look taken at do
you want to equate somebody bringing a car back because they
don't like the ride characteristics with somebody brought a
car back because there was a problem with the brakes.

You know, that I think we have some concern about.
But in general, no. I think from a trade assist standpoint,
if that's part of a buyback disclosure and we understand
what we're supposed to disclose, I don't think we have a
problem with that.

MS. HARRINGTON: Janet.

MS. SMITH: I just had a question for Gerald because
I thought I heard him say that at least in Ford's buyer
certificate program your instruction to your field people is
that if it's a lemon law eligible car you won't use the
buyer certificate?

MR. DUCHARME: Those are the instructions.

MS. SMITH: How does Ford define what a lemon law
eligible car is?

MR. DUCHARME: It depends on the state law.

MS. SMITH: Okay. So under Florida's law our line
for lemon disclosure has to occur is when a claim is filed
with either your informal presale or procedure or the
state-run arbitration process.

There is a period before that when the consumer has
to notify the manufacturer directly if the vehicle has a
defect and give the manufacturer a final opportunity to cure the defect.

And we were interested in kind of knowing at what point there do buyer certificates occur as a means of resolving that dispute? There is definitely notice of the defect.

It's not, under our law at least, a requirement to disclose if the vehicle is taken back. But it may be a line that's discussed here as a point where disclosure maybe should click in.

MR. DUCHARME: Well, I'd have to talk to my colleagues who have Florida specific knowledge in their repertoire; I don't at this time. However, the rule out there is that we have, though, with the use of these certificates is that they are not to be used for vehicles that would qualify for lemon law protection.

They are solely to be used for customer satisfaction purposes and the kinds of situations we discussed. When I mentioned the example of the car that stalled a couple of times, you should all take into account that many times cars will stall intermittently when the consumer goes out and buys, you know, dirty gasoline and puts that in the product.

And some people who don't have a large amount of database in terms of the mechanics of the car will lose confidence in the car even though the problem has nothing to
do with the car.

And that was an example that I put Ford had a
problem that Rosemary was describing. But if you want the
answer in Florida, I'm very happy to get that information
for you.

But the message we have to our consumer affairs
people is that these certificates are to be used for a
particular kind of purpose. They are not to be misused.

And they are misused. But we have, you know, ways
of tracking that in the company and we try to inspect that
or stop that when we come upon it. But they are solely to
achieve customer satisfaction in non lemon law kinds of
situations.

MS. HARRINGTON: Lou, you were next on my list
but --

MR. GOLDFARB: I withdrew.

MS. HARRINGTON: Okay. And, Gerry, I guess you --
was there anything? You were next after Lou.

MR. DUCHARME: I think that's it.

MS. HARRINGTON: You're covered, okay. Robert?

MR. GRAHAM: The general tenor of the discussion I'm
hearing today is sort of tension between underinclusiveness
and overinclusiveness. And we've been talking a great deal
I think about these trade assists and these so-called
goodwill buybacks. I think we are talking about the
marginal cases here.

So when, if we're going to focus on the marginal cases, I'd like to know from the manufacturers if they can give us a sense of what percentage of the numbers of the vehicles that they say that they buy back per year, what percents of those include the goodwill buybacks?

I mean, if we're going to be that concerned about so -called goodwill buybacks, we've got to make sure that that's a substantial number.

MS. HARRINGTON: That's a very good question.

MR. GRAHAM: So, for instance, George, you mentioned in your comments that roughly one half of one percent of the vehicles under warranty at any given time are purchased, during a given year are repurchased by GM.

If you assume a two -year warranty, we can always roughly raise the cap and figure, what percentage of those would you say are buybacks for vehicles that are not strictly speaking lemons?

MR. VELEZ: First of all, let me say that number is wrong. It's grossly overstated. But in percentage terms I can tell you three percent of the vehicles we buy back are mandated to be bought back; 33 percent are bought back under guaranteed satisfaction programs. And you're talking, the rest of that from our perspective is mostly goodwill. So I would say well over 50 percent.
MS. HARRINGTON: So you're saying 64 percent of the cars that GM buys back you would classify as goodwill buybacks?

MR. VELEZ: No, I wouldn't go that far. I would say if it's in a gray area, if I'd say even being conservative and taking half of those, we're talking about 16 or something percent being goodwill and giving the benefit of the doubt. Because obviously we buy back cars that were not ordered that do meet lemon law presumptions.

MS. HARRINGTON: Early buybacks, as they're called.

MR. VELEZ: Yeah. Well, once arbitration has been filed in Florida, for example, then that's a vehicle that has to be disclosed. We weren't ordered to buy that car back but we chose to and it met the presumption and so we have to disclose that.

MS. HARRINGTON: Lou.

MR. GRAHAM: If I may just clarify what I'm trying to say. We have been talking today about certain things where you have got a long-time customer, somebody that is reputable, going to plead on them for General Motors, Chrysler, Ford vehicles.

What percentage of those cases where somebody has, somebody has bought a Ford Explorer, for instance, and they aren't able to tow the cabin cruiser. What percentage of the time are we talking about that kind of a case, bad color
or just not knowing how to drive a truck for instance?

MS. HARRINGTON: Lou.

MR. GOLDFARB: Well, we're talking, I mean, you put

it into categories, goodwill and lemon or goodwill and

mandated by my community. We don't consider every vehicle

that is not a mandated buyback a goodwill buyback.

I mean, there are many, many -- and I think our

percentages are probably the same as GM's; three percent may

be mandated.

The vast majority of them are vehicles we bought

back where a customer has complained of a problem. We

believe we've fixed it. The customer disagrees. We buy it

back. And we fully disclose what the problem was, what we

did to fix it.

And we make sure that disclosure is given to the

dealer and the dealer gives it to the customer. So, I mean,

if we wanted to assume that we're assuming that all other

than mandated buybacks are goodwill buybacks --

MR. GRAHAM: No, I understand that.

MR. GOLDFARB: --the product's worthiness has been a

problem, and that problem has been fully disclosed.

MR. GRAHAM: I understand that. Great.

MS. HARRINGTON: But we're not -- Let me sort of

clarify, Lou, then. We're not, though, talking, are we, in

the double digits of percentages of cars that are bought
back about cars that are bought back because the customer
thinks that the trunk is too small or doesn't like the color
or--

MR. GOLDFARB: No, no.

MS. HARRINGTON: --you know, finds that it drives
like a truck or, I mean.

MR. VELEZ: Yeah, we are.

MS. HARRINGTON: I mean, that's a small percentage
you're saying in the sense of this?

MR. GOLDFARB: For us it's a very small, small. I
mean, we don't have the term goodwill on our disclosure
form. Now, we do have, you know, settlement of litigation
or resolution of, you know, a dispute.

We have some, we have about four or five different
items on the disclosure form. But most often there has been
a problem. We made an effort to fix it. We think it's
fixed, they don't, and we buy it back.

Now one could say that's for customer satisfaction.
We wanted to satisfy that customer and hope that they buy
another one. In many cases they do.

MS. HARRINGTON: Phil.

MR. NOWICKI: Yeah. I was just going to say, part
of it is related to what, I believe it's Lori said, Cohen,
as far as what the disclosure is going to be. Giving the
example of the truck that rides bad. Well, yeah, to some
people that is true. They've had a car. They're now in a truck. It rides differently. They complain about it. And there is goodwill. And in some of those instances it's swapping people out or using buyer certificates.

Other instances, though, it may be a matter of degree. And maybe this truck does have a vibration problem that is real and genuine and it's bought back for that reason. It's hard to decipher what that difference is between what is goodwill and what is a legitimate problem.

And again, from the manufacturer's side when it clearly is something like color or like a bad ride or, I mean, adjusting to a different type of vehicle, to then say it's bought back because it wasn't repaired after a reasonable number of attempts may be somewhat excessive and may be something that misrepresents the history.

But it's, like I said, it's very, very hard to try and define what this problem is because you're going to have differences of opinions on it from people who handle the complaints from the government and from company people who may see it differently. So it's --

MS. HARRINGTON: Is it naive to think that it would be possible for either the dealer or the manufacturer to disclose the following: This car was bought back because, and then the "because" would be the previous owner complained of a problem and was not satisfied with, you
know, the efforts to repair, and identifying the problem; or
the previous owner didn't like the way that the car drives.

Or, that is, about the reason for the buyback. I'm
not talking here about lemons because those disclosures are
already set. I'm talking about nonlemons. Can that, is it,
is that something that can be done by dealers and
manufacturers?

MR. GOLDFARB: Yes.

MS. HARRINGTON: And if it can be done, is that a
satisfactory solution?

MR. GOLDFARB: Well, we think it is being done. I
mean, that is what is happening today. I mean, we have
disclosure forms that have a number of -- we don't use quite
the verbiage that you suggest, though.

But, I mean, I think it says customer satisfaction.
And then below that, okay, it lists the problem complained
of. And below that it specifies what was done to repair
that problem. And that is the disclosure we have been using
since '88, '89.

MS. HARRINGTON: Phil.

MR. NOWICKI: Okay. Let me make this point. What
if, following up on the point you raised, what if you had
the customer who returned the vehicle sign the form for the
reason of buyback, provided though it wasn't done under any
duress or conditions to get the settlement?
In other words, how do you -- and wouldn't that be the best information to then pass along to the next buyer, provided it wasn't done under any duress, giving them the disclosure.

Yeah, they swapped it out because I didn't like the color. And I'm the first owner, and here's my name and address. And that would be a disclosure that would be passed along to the next buyer.

MS. HARRINGTON: Rosemary.

MS. SHAHAN: I think we are moving in the right direction. If we can address this without having what we call the loopholes. I mean, our biggest concern is that the manufacturers in a number of cases that were cognizant about have used this customer satisfaction.

We feel like it's been abused, that vehicles that are really very defective and serious defects have been designated as customer satisfaction. I feel like it would be helpful for us to see the disclosure forms that manufacturers are using.

And I appreciated the fact that Ford provided its disclosure form with its comments. And I feel like it would be helpful if we could get those from all the manufacturers, maybe the disclosure forms that have been in use in the last two to three years.

Because, for instance, the one disclosure form that
we noted that GM had been using, I don't know if GM is still using, indicated it was a customer satisfaction buyback. And then when you read the fine print about it, it said that it could also be a lemon buyback.

And to my way of thinking they're not, it's not the same. If it's customer satisfaction, that implies that it was a trivial concern or a matter of taste or something, not that there --

MS. HARRINGTON: Do you have a basis for saying that that's what that implies, or is that just your sense or?

MS. SHAHAN: Just in a sense of it and in talking with consumers. I think there is some implication there that customer satisfaction means a customer was dissatisfied maybe not for a legitimate reason or a reason that someone else would be concerned about.

But if it's also lemon law, if it could also be lemon law, then that's kind of contradictory. I mean, that's a different matter. I think where manufacturers run into trouble is where they're indicating it was a customer satisfaction buyback, and the second owner hears somehow from the first owner and the first owner says, oh, yeah, it was really a big pain. And I thought it was --

MS. HARRINGTON: But I hear Lou saying, for example, that there is more disclosed than customer satisfaction. And you've already explained that.
George, what about you? Is there more? I mean, what's the, what is it that you're saying on the these customer satisfaction disclosures?

MR. VELEZ: I'm sorry. What was the question again?

MS. HARRINGTON: When GM provides a disclosure on a buyback and the reason for the buyback is customer satisfaction or customer dissatisfaction, is there additional information provided about the nature of the problem or the, whatever, that left the customer dissatisfied?

MR. VELEZ: Yes, there is.

MS. HARRINGTON: And give me an example of what that would be.

MR. VELEZ: Well, here is a copy of our form. And the form has the different categories that you can check off. And then it has an area where you, in all instances, should write in what the reasons for repurchasing the vehicle were.

The category Rosemary is talking about is titled mediated or customer satisfaction purchase. And then what the verbiage explains is this problem; we have put definitions.

We're not going to argue about whether this was a lemon law or customer satisfaction. We're just telling you that's the general category it fell in and these are the
reasons we bought it back.

    MS. HARRINGTON: Could you read us that paragraph, please?

    MR. VELEZ: It says, "General Motors or the dealer voluntarily repurchased or reacquired this vehicle as a customer satisfaction measure.

    Included in this category are vehicles repurchased under a guaranteed satisfaction program or reacquired to settle or mediate a dispute in the BBB Auto Line Program in which General Motors participates. These disputes could include claims that could fall under a state lemon law."

    Now, the thing you have to understand is that many states have their own requirements. So this is filled out always in addition to whatever the state requirement is. So you would actually have two forms, as you do in California, that are handed along the chain that hopefully gets to the consumer.

    MS. HARRINGTON: Thank you. Evan.

    MR. JOHNSON: I guess my reaction to that is similar to Rosemary's. I mean, the disclosure isn't specific enough. When you include everything it doesn't tell the consumer anything. And that's what that does.

    I have a philosophy of giving, I have no problem with giving information in the disclosures and I think we should discuss that specific information. I think when
you're talking about sort of a threshold cut-off, and something that needs to be in there is when a consumer was alleging, you know, a defect in the car. And we can get into specific how you want to word that, but I think FTC staff would work out things like that, I'm quite sure.

But if there is an allegation, then I think you're in a category where you need to, that needs to be said. And that's a fairly objective test that you don't want to get into too many judgment calls on the labels.

If I could digress just a moment, I have a question for Lou Goldfarb, and that is, the figures on buybacks in Chrysler's comments, Lou, now did those not include trade assists, which are the ones that you help the person into a new car on or not?

You seem to use trade assists pretty, pretty broadly. So I'm asking you if your figures of buyback exclude trade assists.

MR. GOLDFARB: Why do you say we use trade assists broadly? I mean, I gave no indication of what the number of trade assists were; I just defined the category, which is where the dealer takes the car back.

I can't break down that number. I didn't actually prepare the comments; Dave Husaka did. And I'll plead Gerry's defense; I'll get that information to you.

(Laughter.)
MR. JOHNSON: Okay.

MS. HARRINGTON: Gerry, you're next.

MR. DUCHARME: Thank you. In terms of disclosure, I know the forms asked us, at least our forms asked the people preparing them to check a box.

One is buyback was an effort to promote customer goodwill; another, a decision of the Ford Consumer Affairs Board; an adverse state lemon law ruling; a settlement in a legal matter; or other.

And very frankly, it seems to me that we aren't doing anyone any favors by asking people to make these kinds of, you know, judgments really. If it's a -- The important thing is to get the facts out to the consumer why was the vehicle bought back because it may have gone through an appeals board process.

And maybe there was nothing wrong with the vehicle; yeah, we had to buy it back. And that happens all the time; I'm sure my colleagues in the industry will agree. What we do at Ford, we write down on the form the reason, immediate reason why the vehicle was repurchased. But we attach to the form, and this goes right through the auction and goes through the dealership and to the consumer the 24, the last 24-month history of repairs made at dealerships on warranty off of our computer records.

MS. HARRINGTON: Is this like a plain English

For The Record, Inc., Waldorf, Maryland (301) 870-8025
statement though, or is it -- I mean, I'm, I'm pretty car
dumb. So if I were reading one of these statements would I
have a clue about what this means?

MR. DUCHARME: Yes, you would. It's done in a, we
try to do it in a self -explanatory way. There are people
obviously who will not know what it means to change a brake
rotor, and that will mean nothing to them. But there is not
any other way of saying it.

So to some, yes, they won't understand it if they
have no inclination to mechanical terms. But the
disclosures are written we believe in clear terms. The
dates are there for the repairs, and the full 24 -month
history is appended to the disclosure.

Our view is the consumer is entitled to have the
facts. Whether they're relevant or not is up to the
consumer to decide in making his purchase. But the facts
ought to be there.

Most of these service repairs during warranty
probably will have nothing at all to do with the reason why
the vehicle was repurchased. But yet they're there. If the
consumer finds it relevant, fine; if he doesn't, that's
fine, too.

MS. HARRINGTON: Jack.

MR. GILLIS: A couple things. One, I'd like to
respond to your question, Rosemary, in terms of the common
understanding of customer satisfaction. I go back to
something Gerry said.

You're buying this car back for two reasons. One,
because there is something wrong with the customer, the
customer is unhappy, or there is something wrong with the
car.

So I think there is a pretty common understanding
that customer satisfaction means we wanted to make the
customer happy. And that implies there is nothing wrong
with the car.

Because there is no reason without, with a few
exceptions, for any smart business person to simply buy back
a vehicle that has nothing wrong with it. I mean, we don't
want to see you guys doing that because that's going to
raise the cost of cars.

So I think that there is an understanding that the
word customer satisfaction means the car is probably okay.
We just have -- You know how customers can be. Gerry just
said it earlier; hey, we buy back great cars that even the
appeals board say are bad cars all the time; right,
colleagues? And you all nodded your head, yeah, yeah, that
happens all the time.

There is something that we are missing here. So I'd
like to, you know, just from our perspective we think
customer satisfaction has a clear cut implication.

For The Record, Inc., Waldorf, Maryland (301) 870-8025
The second thing is, George, in the thing you just read to me, you just said GM or the dealer buys back.

MR. VELEZ: Right.

MR. GILLIS: Now, earlier you had said, listen, we buy cars back and that's our deal. The dealer may even buy cars back, and that's their deal; we have nothing to do with that.

MR. VELEZ: Right.

MR. GILLIS: So --

MR. VELEZ: We give the dealer this form and say we suggest you fill it out and we'll hand it on to the next purchaser.

MR. GILLIS: Okay. So that's just a generic form that either you or the dealer would use, okay.

And then finally, Gerry, can you expound on the fact that you buy a lot of cars back that the appeals board say are wrong but you think are, consider problematic that you think are okay?

MR. DUCHARME: Well, if we didn't think we had a case we wouldn't have matters go to the appeals board. If we thought really and truly there was a real problem with the car, we would contest it and we'd take care of the customer.

We disagree many times with what consumers said. We try to help them. We, you know, try to maintain their
loyalty. But sometimes we have disagreements. We have allegations and claims mainly with respect to our cars that frankly astound many of us and we find ourselves faced with decisions of appeal boards that yet further astound us. And those vehicles --

MR. GILLIS: Well, if a car then rises to the level of becoming a lemon and goes through a state lemon law process, are you also saying that for the most part the reason why that happened is because we would have taken care of this a long time ago but we really think the car is okay?

MR. DUCHARME: There are all kinds of situations. I'm not saying in every situation that's the case. But there are many situations where we find ourselves buying back cars that we find nothing wrong with; there are no things wrong with it.

We resell those, you know, vehicles and we put a warranty on them. And we find in many, many cases that these vehicles are never back in for the repair, not a thing wrong with them.

MS. HARRINGTON: Steve.

MR. TATERKA: Let me make a couple of points. First I want to address something in the form that George read. The language that you read included both guaranteed repurchased cars and I think goodwill adjustments.

The reason I said earlier that I didn't have a
problem with excluding guaranteed repurchase cars is that
typically guaranteed repurchase programs are going to extend
for such a short duration that the vehicle wouldn't be
nonconforming under a state lemon law anyway.

In other words, if the customer has the right to
insist on a guaranteed repurchase within 30 days of when
they repurchased it, it's unlikely that the vehicle would
have met poor repair attempts or been out of service for 30
days, which may be a typical lemon law criteria.

But I want to address sort of what I think is a more
serious problem on the mechanics of disclosure. We are
talking about the disclosure form that the manufacturer or
maybe the dealer was going to give presumably to the next
purchaser.

But in the real world, the only document that you
can assume is going to make it to the next purchaser is
going to be the title certificate. And I think, I mean, I
think this --

MS. HARRINGTON: Steve, we're going to get to that
issue later today.

MR. TATERKA: Okay. Okay. Well, the only thing I
wanted, the only point I wanted to make was that regardless
of what is put on that disclosure form, you can't make the
assumption that it's going to be seen by the next person.

Because, I mean, when I was in the regulatory arena,
I mean, I can't tell you how many times I saw a dealer selling cars that they may have taken in on trade or bought at an auction and went ahead and sold; they couldn't even disclose the mileage properly because they didn't even have the title certificate from the prior owner.

And now we're talking about additional forms that presumably they're going to have and disclose to the next customer? It's not realistic.

MS. HARRINGTON: George?

MR. VELEZ: Yeah. I wanted to address I guess two issues that I just couldn't let go, silence sometimes being interpreted as assent.

One is that someone made the statement that it's a pretty objective thing when a consumer alleges that there is a problem with a car. There is -- Everyone here, most everyone here probably has owned an automobile.

It is a very emotional thing. And it is particularly frustrating when you believe there is a problem with the car and it can't be fixed to your satisfaction. So it becomes a very emotional thing. And there is absolutely nothing objective about it sometimes.

If you take a look just at the Florida statistics, 56 percent of the cases that went to arbitration by their own statistics were settled in favor of the manufacturer.

If we had a customer satisfaction matter about those
car backs, they would then be titled lemons or they would be disclosed as lemons. So my only point is I don't think that's a valid assumption.

Second, you know, folks, if you want to take a look at this disclosure and read the whole thing, I'd be glad to pass it around and give you copies or whatever. But that's the catch-all category here.

There are specific disclosures for when it has been ordered to be bought back, adjudicated, or bought back after having been filed with either a state or a DSP arbitration system.

So that catch-all category there is specifically because we've got people out there in the field who are trying to do their job. They've got lots of other things to do and they happen to be human.

And we don't want to put them in the situation where they have to have a thousand boxes and have to pick the right pigeonhole. We give them the general category. They say I can't figure out what this is, but here it is and we're making disclosure about what the problems are.

MS. HARRINGTON: Would you reconsider that? I mean, for example --

MR. VELEZ: Oh, sure. As long as that's --

MS. HARRINGTON: --we have some very good, I see one of them here, Carolyn Shanna from our Office of Consumer

For The Record, Inc., Waldorf, Maryland (301) 870 -8025
Business Education, who I'm sure would be glad to work with any of you on your forms.

MR. VELEZ: No, we would take input from whomever. We are not proud -- we're not, no pride in ownership here.

MS. HARRINGTON: Great. Well, Carolyn would be glad to work with you on your form because I, I have a problem with that paragraph that you read. I wouldn't know as a consumer what that meant. I mean, I don't, that doesn't, that doesn't hit it for me in terms of giving useful information.

MR. VELEZ: But you understand that the driver behind that is that you, first of all, you're getting a state form in some instances. And again, the driver behind it is you don't want to guess wrong.

MS. HARRINGTON: Sure.

MR. VELEZ: And you are getting presumably what happened, what were the mechanical problems. But, yeah, we'll take input.

MS. HARRINGTON: Peter.

MR. MAIER: I have two comments. One is that in my experience a pure customer satisfaction buyback, that is, because the customer doesn't like the color, for example, is extremely rare. And the discussion I think is, in focusing on that, is missing the much larger issue.

But the second question I wanted to ask the
manufacturers is there is an interesting suggestion in the
comments by the California Department of DMV that the
disclosure form have attached to it a printout of the
warranty history. In my experience the manufacturers can
easily print that out. I think Mr. Ducharme --

MR. DUCHARME: We do that. We do that in the
format --

MR. MAIER: Ford does that. And I'm wondering if
the other manufacturers do that. And if they don't, what
they think about that suggestion.

MS. HARRINGTON: Okay, we're going to -- Lou is next
on the list. So we'll hear from that manufacturer whatever
it is that you were going to say after you answer Peter's
question.

MR. GOLDFARB: Well, actually, it ties into what I
was going to say which was to expound on what Jack Gillis
said about how people interpret designation customer
satisfaction.

I think, correct me if I'm wrong, Jack, I think you
were suggesting that someone who sees customer satisfaction
check things that had nothing to do with the car. I have
trouble believing it. We don't buy cars back because people
are unhappy with their marriages.

(Laughter.)

MR. GOLDFARB: You know, if someone is unhappy and
brings it to our attention it's because they're unhappy with
the car. The important information on the disclosure is
what was complained about, which we disclose, and what was
done to fix that, which we disclose.

And that is the critical information. All these
designations including, frankly, lemon law designation is
confusing. It's misleading. The real information that's
useful is what was complained about and why was this car
bought back and what was done to fix it and was it fixed?

I'm not sure giving a three-year warranty history is
going to be useful to consumers. Frankly, it could be
information overload. I mean, a lot of that information is
difficult to decipher. We shouldn't -- it may be too much
information. I don't know.

I mean, I'm not saying it's impossible to do. If
Ford does it, certainly it's doable. But, you know, I just
think that no one is misled by a proper disclosure form,
even if customer satisfaction is checked because we always
disclose what was done, what was wrong, you know, where the
vehicle is.

MS. HARRINGTON: Adam, question?

MR. COHN: Yeah. Actually maybe the other
manufacturers should be given a chance to respond first
because my question actually takes a step backwards to an
earlier question, so --
MS. HARRINGTON: Okay. We'll come back to you.

John, you were next on the list, do you want to respond to Peter's question?

MR. WHATLEY: Briefly two points. The first one was I wanted to take issue with a statement that no rational manufacturer were to buy a car back that wasn't defective. I mean, we can argue about how often it happens.

It does happen. Because manufacturers look at this in terms of the investment of their customer. They want their customer coming back. They want their customer talking to their neighbors about how good an experience they've had.

And there are a number of manufactures that will do that. They may not have a thirty days, a program in writing with a particular car back for whatever reasons. But they're very liberal about buying the car back in some situations.

The second thing is, when you start having to -- this jumped to the question what you list on the form. If you start having to list the warranty histories, it's, manufacturers vary in the capacity to be able to do that for one thing.

Some have very sophisticated systems. Some don't. And if you're trying to get, unless you have a standardized national uniform way of doing it, you're going to have all
kinds of problems with the complexity and confusion that would result from this.

Everybody doesn't do that. Everybody I think has some problems doing it. And there would be a lot of problems, some shoehorn holding everything to that kind of a form.

MS. HARRINGTON: Gerry, do you have an answer to Peter's question, or you've already answered it?

MR. DUCHARME: I'm going to have to go back to your question, Peter. I was thinking of something else as you asked the question. What was your question again exactly?

Sorry.

MR. MAIER: The question is why isn't it possible simply attach with a stapler a printout of the warranty summary which I know that at least the three big manufacturers and the domestic manufacturers have to their system, which isn't an enormously complex task --

MR. DUCHARME: Right.

MR. MAIER: --something I think a dealer can pull up in an instant at their terminals at the dealership.

MR. DUCHARME: Okay. Well, I guess the answer is it is possible. But I would agree with some of my colleagues, and you questioned how relevant all that is, you know, to the particular consumer buying a particular car.

It seems to me the really relevant information is
the fact not that it was a lemon law buyback or part of the DSP settlement or the like, but the fact that it was repurchased by the manufacturer.

And the other relevant fact is why it was repurchased by the manufacturer. The third relevant fact is that it was fixed and here's how it was fixed by the manufacturer. It seems to me those are the three relevant things to be told to the consumer.

MS. HARRINGTON: Or that it wasn't fixed.

MR. DUCHARME: Or that it wasn't fixed. Okay. Or that it wasn't fixed is a relevant factor as well. And it seems to me that if we had that on a uniform form used throughout all the United States, then we'd have consumers who would know what to expect when they buy a car and they'd know how to understand it because they wouldn't be faced with all these 20 forms.

MS. HARRINGTON: All right. Well, let's test that proposition. If we had a form that said this car was repurchased and we included trade assists in this for the purposes of this question, so whoever does, whether it's the dealer or the manufacturer, the fact that the car has been repurchased is going to be disclosed, that it was repurchased because and there is going to be some fairly specific information filling, that is provided, and this is what has been done about that.
I mean, if it was repurchased because the trunk was too small, I assume that the statement is nothing was done to enlarge the trunk.

(Laughter.)

MS. HARRINGTON: Okay. So, I mean, I'm talking about specific, vehicle specific information. Would that fix, if that information was provided on every buyback, would that fix the problem?

Jack?

MR. GILLIS: I think it would.

MS. HARRINGTON: Okay. Evan?

MR. JOHNSON: I'm going to hedge a little on that one. I think that that sounds good. I'm wondering whether a little bit more information might be relevant. I mean, it might be relevant if the case, if it was a car that got bought back after a court action or something like that. That would be my hedge on that. But I think some categories like that might be relevant additional information. But that core information I think is going a long way toward where we need to be.

MS. HARRINGTON: Phil?

MR. NOWICKI: I have some reservations with that. You get into whether something is fixed and whether you want to bring in a third party in to determine whether it's fixed or whether you just say it's repaired.
MS. HARRINGTON: Didn't use the word fixed in my disclosure.

MR. NOWICKI: Okay.

MS. HARRINGTON: And this is what has been done about it.

MR. NOWICKI: Okay. I mean, it has potential. Yeah, I still get back that in the end maybe some bright line threshold just takes care of it and deciding where that bright line is.

MS. HARRINGTON: Robert.

MR. GRAHAM: My suggestion of that story is that if your, if somebody other than the manufacturer has got some control over the language, then that shows some promise. Otherwise if the person buying it back, the party buying it back has complete control of the language used, it's going to become a little bit more problematic. Because whether it's conscious or unconscious, the messenger controls the message to some extent.

MS. HARRINGTON: Rosemary.

MS. SHAHAN: I think it would really help consumers to capture that whole category of vehicles that are getting bought back. So I think that aspect is hopeful, especially if there is a double -check there, if there is a potential that the first owner can come back, you know, and communicate with the second owner. I'm not saying we should
structure it that way. But if there is a way of
spot-checking the accuracy.

One concern that we have is that we're seeing, when
manufacturers, or one, at least one manufacturer, Chrysler,
I don't know if Chrysler is the only one, is buying back
vehicles from the first owner, they're asking them to sign a
confidentiality agreement not just regarding the terms of
the settlement, which we have no problems with, but
regarding the reasons why the vehicle was bought back.

And I'd like to know from Chrysler and the other
manufacturers if this is becoming common or if this is rare.
Because I think that kind of resolution has some real
potential for being helpful, but I'd want to have some way
of double-checking it for accuracy.

MS. HARRINGTON: Okay. I'm going to get to Lou in
just a minute. But I wanted, Peter, did you want to say
something? Did you have an answer to that?

MR. MAIER: Yeah. In answer to your question. I
think that's moving in the right direction. I think there
are some other things that need to be added to the mix to
make it effective.

One is the title and registration branding. Because
what you're talking about would only survive the first
purchaser. And that information should survive down the
line.
Also, I think it's very important to make the disclosure form not just be posted on the vehicle but actually be signed and a copy given to the purchaser. That's --

MS. HARRINGTON: All right. Well, let's test -- Okay. Now we're going to give a -- I'm sorry, Peter.

MR. MAIER: And then there's, the other things I think that are helpful are, Ford, for example, is starting a program putting a door sticker similar to the odometer change sticker. I think that's a very useful concept.

MS. HARRINGTON: Okay. Lou. This is on my question, not Rosemary's at the moment.

MR. GOLDFARB: Well, I have to respond to both.

MS. HARRINGTON: No, you just have to do what I tell you to do.

(Laughter.)

MS. HARRINGTON: We'll get back to Rosemary's question.

MR. GOLDFARB: Well, it relates to yours, actually.

MS. HARRINGTON: Okay.

MR. GOLDFARB: What is it, your solution is our solution, okay. But you can't avoid using the word repair. I mean, we don't want to say to these people, you know, writing, dropped the floor pad and put in new sleeves.

I mean, if we put just the technical details of what
an automobile mechanic has done, okay, without bringing the conclusion into it that this has been repaired, that's the information that the buyer wants to know; has it been repaired?

We think it's been repaired. The consumer complained about the transmission. We spent X number of hours on it. We repaired it, okay. I mean, that has to be disclosed. You can't avoid doing that. I mean, that's critical information.

I'm not aware of ever requiring confidentiality as the reason for the buyback. That would be totally contrary to what we're doing. I mean we are giving the reasons for the buyback.

MS. SHAHAN: I have a copy of a  --

MS. HARRINGTON: Ah.

MS. SHAHAN: Sorry.

(Laughter.)

MS. HARRINGTON: Gerry.

MR. DUCHARME: First of all, on the confidentiality in the buyback I, that is totally news to me. We have a, in a situation where we buy back a vehicle we ask for a release from the individual but there is no confidentiality in there at all.

And on the point you made too, Rosemary, about making people available to be contacted by subsequent
purchasers, I'm not sure a lot of people want to be caught up in that, quite frankly.

And I think very frankly if we were to require that, I think people would have some substantial concerns about their privacy. And just, you know, once they sell the vehicle they want to be out of the picture. So I think --

MS. HARRINGTON: I'm going to interject something here that's probably not going to make you happy. But we don't want to talk about agreements between manufacturers and car owners. That's not what we're here to talk about today.

What we are here to talk about today is information that goes to subsequent purchasers of cars that are bought back. So that's just not, that's not an issue for today.

MR. DUCHARME: I just want to make one further point if I could. That terms of the fix that was made on the car, you want to keep in mind that when someone buys a reacquired vehicle from us, they get a comprehensive 12-month warranty on that vehicle, the entire vehicle.

So it's interesting to know what the fix was. But if anything else goes wrong with the vehicle or if in the very situation where the fix isn't quite, you know, effective, the consumer is protected with a full warranty for 12 months or 12,000 miles.

MS. SHAHAN: Could I just respond to what Gerry said
about having the first consumer contacted? Because I think there is a misunderstanding there. And I don't propose a formal way that the names of the first owners would be made available necessarily.

I can agree that there could be privacy concerns. But just that the potential be there for the first owners to communicate about the problems. We see that as desirable.

And then, Adam, is your question in order yet?

MR. COHN: I think it is.

MS. HARRINGTON: Okay. Well, let's hear from Janet and then we'll come back to you.

MS. SMITH: Well, in answer to Carole's original question, I think we're seeing what's happening. We are creeping in now into the area of instead of saying what's been done to address the reason for the buyback, everybody wants to say it's been repaired or it's not been repaired.

And that's -- Our experience has been that on those manufacturers who add a comment about repairs, a lot of times what we will see are things that were basically defenses raised at an arbitration hearing that were rejected by the arbitration board or dates of repair that were early in the process that obviously did not work or the vehicle would not have been declared a lemon.

And I think Phil's point, that was the problem that
Phil pointed out. If you start getting into allowing that kind of an explanation, and as Robert said, if the control of the explanation is the manufacturers' to control, then you're going to see things like that that are misleading because they are basically related to things that the next buyer is not going to know where that, where that worked in the chain of events.

But I think that's where you need to be careful in covering those three areas. I think your basic premise is a good start for what needs to be on the disclosure form, whatever form it takes.

MS. HARRINGTON: Adam.

MR. COHN: I had a question in general for the manufacturers, but specifically for Gerry. About -- I've heard a lot about what types of disclosure should be given, what types of protections should be given to the consumer that receives a buyback.

But I'm still unclear about the issue of trade assists. Is the 12-month warranty that Ford gives, I assume that's just for manufacturer buyback.

MR. DUCHARME: That's correct.

MR. COHN: To what extent do you think and the other manufacturers think that when a manufacturer makes a good faith effort to help with a manufacturer buyback and alleviate the problem of disclosure and warranty with a
manufacturer buyback, does that put pressure on a
manufacturer to increase the number of trade assists every
so much?

I mean, what protects against trade assists becoming
sort of a future loophole for vehicles that are currently
being dealt with as manufacturer buybacks?

MR. DUCHARME: If I understand your question, you
were saying that if no disclosure is required with respect
to a vehicle that is traded in with a certificate, there are
no restrictions on that at all, what's to stop us from using
those rather than getting into --

MS. HARRINGTON: Buybacks.

MR. DUCHARME: --buybacks. I guess our own
internal, our own internal policies. We instruct our people
that they are not to use these for vehicles that are, quote,
lemon law eligible.

Other than our own policies, I know of no state laws
that, you know, creep into here and that require us to do
one thing or the other.

We want to keep in mind, too, that under the law, at
least as we understand it right now, the manufacturers are
not under an obligation to buy back a vehicle until the
state process has run its course.

All the rest of the buybacks are done at the
discretion and voluntarily by the manufacturer. So, you
know, you're into a lot of gray areas here, Adam. I'm not sure exactly, I'm not sure exactly how to answer your question actually.

MR. COHN: The reason I was asking it is just in terms of defining a buyback. If we cast this wide net for all situations where manufacturers buy back the car, there was an earlier discussion of whether trade assists should be included.

MR. DUCHARME: Yeah. Well, the concern is, again, that first of all, as I tried to describe it before, perhaps I wasn't too articulate in doing so, but there is a spectrum here of things.

And you get into your certificates, which are at one end of the spectrum. And you get into state law mandated buyback at the other and you have this area in between. And we try to organize our processes within Ford so that certificates are used at this end of the spectrum.

And to get to a certain point, again, there are a lot of gray areas. Then you get into the goodwill situation, which is a buyback, a reacquired vehicle disclosure. And then you get into the other areas where you have mandated buybacks.

MR. COHN: But would there be, do you think there is an objective way of drawing some sort of line maybe based on some sort of dollar figure value for the certificate or
something like that?

MR. DUCHARME: Well, there may be. The concern I think is, I know in the request for comments there was a question in there about whether some regulation in certain areas would have a, quote, chilling effects on what the manufacturers do.

And very frankly, if we got into a situation--and I will speak for Ford; I can't speak for my colleagues--but if we were into a situation where suddenly we were to find that all vehicles that were traded in with the use of a certificate were deemed to be buybacks and would be required to have disclosures and all the process that we have views with respect to buybacks, I have to tell you that there would be a substantially chilling effect on the use of the certificates and a substantial reduction in their use.

It costs us a lot of money when we buy back a vehicle. And we buy back a great majority of our vehicles for purely goodwill purposes. And it costs us a small fortune with respect to each vehicle.

One, in terms of paying a dealer to process it; and two, in terms of paying a dealer to make disclosure. Three, in terms of administering the process that runs disclosure to us through the auction back down to the dealer and to the retail customer with follow up.

And I don't think as a company we'd be prepared to
extend that to goodwill certificates. Or if we had to, I think we'd have to find ourselves substantially limiting the use of goodwill certificates which in turn is going to reduce customer satisfaction, in turn is not good for the consumer.

MS. HARRINGTON: Jack, I'm not going to call on you. But do you want to be called on?

MR. GILLIS: Yeah, I would like to.

MS. HARRINGTON: Okay. Okay. I just couldn't tell. Your sticker has been up.

MR. GILLIS: It's a defective sticker.

(Laughter.)

MS. HARRINGTON: All right. Lou, Steve, and Jack, and Jack.

MR. GOLDFARB: I just wanted to get a clarification of Adam's question. Are you saying if we can give less disclosure with trade assists that we may move more in that direction and be less willing to have buybacks that have less disclosure? Is that --?

I mean, there is some confusion. Because you talk about trade assists, and Gerry referred to using the certificates. I mean that's a different kind of a system.

A certificate is one to three thousand dollars. A certificate is given to people that they can hold on to, you know, indefinitely. When they feel like buying a car, they
can use that to get another car.

They trade their car into any dealer, any Chrysler dealer in our case. And we have no control over, you know, what happens at that point to that vehicle.

A trade assist is much more contemporaneous with the complained of problem where someone is real unhappy but, you know, and the dealer wants to take him out of the car and we assist the dealer in doing that.

MS. HARRINGTON: And the dealer takes the car back.

MR. GOLDFARB: That's right, and the dealer takes the car back. The dealer takes the car back in both those two instances because it's traded in for another car. It may be at a later point with a certificate or the trade assist; it's more contemporaneous.

But I guess to answer your question, I don't think either of those objections is going to necessarily, or either anyway, going to get, going to get in the way with us buying back a vehicle that is seriously complained of and that has a problem that the customer is simply unhappy with the resolution of.

You know, it's wrong to talk about defects here. I mean there are complained of problems, and we make an effort to fix them, make an effort to satisfy the customer that it's fixed.

And if ultimately the customer can't be satisfied,
we buy it back and we designate customer satisfaction if
it's not, doesn't come under the statutory definition of
lemon. But we make full disclosure of what was complained
of and what was repaired. So I think the consumer is
getting full information in all these instances.

MS. HARRINGTON: Steve.

MR. TATERKA: I have got just a couple of questions
for the manufacturers. Gerry indicated that Ford issues a
12-month/12,000 mile warranty on buybacks. My first
question is, does Chrysler and General Motors do the same,
even in states -- well, in most of the states that don't
mandate a warranty upon the resale of a buyback vehicle.

And my second question for all three of, Gerry,
George, and Lewis, is would the manufacturers, how do
manufacturers feel about a warranty which would go, which
would be the greater of the one-year warranty, the greater
of the one-year or what the original warranty was for the
first purchaser?

MR. GOLDFARB: I don't think a vehicle loses its
warranty if a vehicle has been bought back. If the vehicle
has been bought back under warranty, that warranty is given.

So we give, we have since '88 given a full one-year
warranty on every vehicle that we sold after we bought it
back.

The original warranty continues, if it's on the
vehicle it remains. Because we don't revoke the warranty
simply because we bought it back.

MR. WHATLEY: Everyone I have ever seen is done that
way. You get the longer of the two.

MR. DUCHARME: That's true for Ford Motor Company,
too. They get the longer of the two.

MR. VELEZ: It's true for General Motors, as well.

But in some instances if the state law is unclear, you may
have to give them the one year even though they have a
longer term remaining on the original warranty.

MR. GILLIS: What I'd like to do is follow up on
something Robert said earlier, and it really cuts to the
heart of this issue.

We started off where it seemed like all the
manufacturers liked the idea of disclosure. However, now we
are finding, and I was really surprised at your remark,
John, when you said manufacturers are very liberal in buying
back cars for customer satisfaction.

We're not all here today because that is the
presumed assumption. We're here today because there is a
huge problem out there that we think is happening, we as
consumer advocates think is happening.

We're not here because you guys are doing such a
great job of buying all these cars back just because you
want to keep your customers happy. And I think part of the problem is we just don't know what the facts are. We just don't know what, other than what we see in the lemon litigation, in the work that Phil has done, that there is a huge problem of people buying cars that have serious defects.

We're not talking about Lou fixing the car and the guy just didn't like the way he fixed it. We're talking about real big problems with cars. Now, are what you guys saying is this is not a, this is not a problem?

MS. HARRINGTON: Actually, Jack, if I could interject, why we're here today is because we want to know whether there is a problem with consumers not receiving information that's material about cars that are purchased after they have been bought back.

MR. GILLIS: Presumably because they need that information. Because the only reason consumers would need that information is if it's true that there are substantial numbers of cases where consumers are buying cars that are defective, that they don't have any idea they're defective. Not because it doesn't happen very much. I mean, let's not get into it if it doesn't happen very much. You've got other things to do; we've got other things to do. If this is really not a problem, let's not do this.

But we think it's a problem. We think consumers are
getting a lot of cars that are bad. But if it's truly not a problem, let's not figure out how to disclose it.

MS. HARRINGTON: I just want to, you know, state for the record that the Federal Trade Commission staff is holding this workshop to find out, or in an effort to find out whether consumers are getting the material information that they need about cars that they buy, where those cars have been the subject of a repurchase. We are not asking the question about whether consumers are buying bad cars or whether there are a lot of bad cars there.

MR. GILLIS: Well, why do you want to know that?

MS. HARRINGTON: Because the Federal Trade Commission's role is to facilitate commerce by seeing to it that material information is made available in the marketplace. That's our concern. That's what the Federal Trade --

MR. GILLIS: But I would assume that information has to have relevance. You know, you don't --

MS. HARRINGTON: Well, it has to be material, that's right.

MR. GILLIS: And relevance to the consumers' purchase.

MS. HARRINGTON: Right.

MR. GILLIS: I mean, in other words, if all cars have four tires, you're not investigating whether consumers
are being told whether the car has four tires on it because
you assume that all cars have four tires. I presume we're
into this thing because we assume there's a problem out
there of consumers getting bad cars.

MS. HARRINGTON: No. You may assume that but we
don't. And I just want to make the record very clear on
that point. The reason that the staff of the Federal Trade
Commission has asked for comment and has invited you here is
to discuss the issue of whether material information is
being provided to consumers when they purchase cars that
have been the subject of buybacks. That's our agenda. So I
just, you can bring whatever assumption --

MR. GILLIS: Regardless of how often consumers get
bad cars.

MS. HARRINGTON: You can bring, you can bring
whatever assumption to this you want to, but it's our
meeting. And so I'm going to say why we're here. And why
we're here is to explore the issue of whether consumers are
receiving adequate information, adequate material
information about cars.

The Federal Government, the Federal Trade
Commission's role is not to guarantee the quality of cars
that are purchased or that are available in the marketplace.

MR. GILLIS: I think I am miscommunicating then. I
don't say that that's your role. But I assume there is
something behind why you are concerned about whether or not
they get this material information.

MS. HARRINGTON: What's behind it is a petition
that's been filed and alleges that they're not getting
material information. And we want to find out what kind of
information consumers are getting.

We want to find out whether they're not getting
information. We want to find out whether there's something
that could be done or needs to be done to improve the
information that consumers are receiving. But we are
responding to a petition that has been filed asking that the
Commission take action.

Now, let's see. Janet.

MS. SMITH: I'm getting back to your original
question about the three things you think might be good for
disclosure. And I think probably, after thinking about it a
little more, my concern about the third part of that, now
what's been done to address the reason that a vehicle has
been bought back, I think probably, and I will throw this
out to the group, it might be better to remove that third
one and just have the first two and try to deal with them at
the front end in terms of where you draw the line to
determine when the disclosure has to be made.

And the reason I would suggest that is because I
really think based on everything I am hearing and based on
what we've seen in our state experience, there is too much potential for abuse of that last part of the information, particularly if it's coming from the manufacturers.

And I think that you're trying to keep it away from whether or not the problem has been repaired, but that's essentially what the industry wants to be able to tell people. And I think it might be better to deal with it at the front end rather than dealing with it at the back.

MS. HARRINGTON: Phil.

MR. NOWICKI: Yeah. And I would say along the same lines, I think we may be going in the wrong direction as far as trying to figure out which cars fit the buyer certificate category, trade assist, and so forth, when I think maybe in everybody's interest some bright line, and deciding where that bright line is, kind of simplifies things.

And then anything that happens after that bright line in terms of where the car is, returned to the dealer, the manufacturer, and then another car is swapped out is probably the simplest way.

Because the other way, you're just going to bring more government interpretation into what all these other categories are or what the first consumer felt or what the second consumer thought they should have known. And it just seems to, you know, confuse more than simplify it.

MS. HARRINGTON: Okay. George. And let me just
clarify, Rosemary, do you have your, your thing up? Did you want to be called on?

MS. SHAHAN: Yes.

MS. HARRINGTON: Okay. George.

MR. VELEZ: Yeah, I wanted to respond to a couple of things I guess. One, to Adam's question, why we wouldn't just buy, step up and buy cars voluntarily rather than giving them to the lemon law.

It's very simple economics; it would cost too much money to do that. So it is never our first instinct to offer to buy back a vehicle. It's only when it's clear that that's, the customer can't be satisfied any other way.

I also wanted to address, I guess an underlying problem here is just the lack of product that we're going to have. And maybe there is no way of getting beyond that. But there is no normative implication, I guess, when we use the word repair.

It is a jargon in the industry. When a mechanic does something to a vehicle, he calls that a repair. So, you know, we're certainly not trying to say that the vehicle is free from defect.

In fact, that's why we offer the warranty and why we don't have a problem offering the extended warranty, the 12 months on the vehicles that are out of warranty.

But if you are going to describe what happens to
that vehicle, if you ask the mechanic off the street he'll
say I repaired that vehicle. And he's not making any
normative judgment about how the car works or --

  MS. HARRINGTON: Joe, do you have a question?

  MR. MULHOLLAND: Yeah. I was curious whether there
is any evidence out there on how consumers interpret
different disclosure statements.

  Because I think a lot of what we are doing here is
speculating, if you will, on how consumers do interpret the
different types of information, whether we are getting
information overload or not. I just throw out the question
whether anybody has done any work in that area.

  MS. HARRINGTON: I think that's an excellent
question. If I may, I'd like to ask everyone to think about
it and be prepared to talk about that in the 1:15 session;
if that's agreeable with you, Joe. Because I think that
really does get to the heart of part of what we're talking
about.

  Ed and Rosemary.

  MR. MIERZWINSKI: Well, I mean, I just wanted to
follow up on what Jack said. And if we're not here to talk
about the extent of the problem--I mean, are the
manufacturers and the FTC, it doesn't sound like either of
you are willing to stipulate to the facts or the allegations
in our petition on the enormity of the problem--when is the
FTC going to investigate that part of our petition which I think involved some serious characterizations that the problem is enormous and ought to be looked into further.

MS. HARRINGTON: Well, the petition alleges --

MR. MIERZWINSKI: Is there a separate investigation?

MS. HARRINGTON: No. I think that's, that's not the way that I read the petition at all, Ed. The petition alleges that information isn't being given to consumers about car that they're buying and that the information is very important to them.

And that's what we're looking at here; what information is being provided, when is it being provided, does that need to be improved, and what are the facts underlying that.

Rosemary.

MS. SHAHAN: Two points. One is, in what you suggested, I think it's extremely helpful including the trade assist, based on our experience.

MS. HARRINGTON: So you would include trade assist in the class of vehicles about which information should be provided.

MS. SHAHAN: Absolutely. Because just as an example, we had a board member who bought a vehicle that had bad brakes. It had a history of bad brakes. The original owner returned it with a trade assist and it continued to
have that serious problem.

And the severity of the problem isn't always reflected by the stage at which it's repurchased. If a manufacturer wants to make a legal point, for instance, they could litigate over a relatively minor problem; not safety, not functioning of the vehicle, maybe it's the paint, say, to make a legal point.

And that gets litigated and indicated as a lemon if we use litigation as a standard. But it might not relate to the severity of the problems that the consumers are experiencing.

And part of what I think I'm understanding the manufacturers to say is that if a consumer has a serious problem, that you want to get them out of that vehicle for customer satisfaction reasons because they have a legitimate, they may have a legitimate complaint. And it's important to include those vehicles.

And the second, I have a question for George with, regarding General Motors and which vehicles are customer satisfaction and just to get a better feel for, even though we're including possibly all vehicles and what's disclosed.

In GM's comments, the statement was made that GM successfully repairs the vast majority of the vehicles it repurchases. Those that are repurchased for customer satisfaction purposes generally require no repair.
And to me that says the vast majority of vehicles
that GM is repurchasing require repair, and repairs are
being made and that they're not customer satisfaction.

But I thought I earlier today heard you say only
about three percent of vehicles are not customer
satisfaction. So I'm more, so I'm confused about the
percentage of customer satisfaction vehicles at GM.

MR. VELEZ: Okay. I guess a couple of things there.
One, we have, as I said, a third of our vehicles we buy back
under guaranteed satisfaction programs. And the number one
reason for buying those back is either paint or I wanted a
two door rather than a four door or vice versa.

So you can't repair that. We're not going to take a
car and make it a four door which was built as a two door.
We're not going to repaint a car. So there is no, there is
no repair required there.

Second, the other vehicles are repaired as I've just
explained. A mechanic worked on them. There was a
complaint. The mechanic tried to fix that complaint. And
we wouldn't put a vehicle back into commerce if we thought
that it still had something wrong that could be repaired.

And the ones that can't be repaired we scrap, we
donate to -- like we said in the comment, we take those out.
There's going to be an argument, and as I said, we're not
here to argue.
And so we will take whatever assumption you want about that 60 percent in between, whatever, whether those are customer satisfaction, whether they fall under some states' lemon law or whatever, that's just more than I can figure out.

But, yeah, those vehicles are repaired. But they were not adjudicated lemons at anywhere along the way is the best I can explain it.

MS. HARRINGTON: Okay. We're going to hear from Peter and Lou. And then we're going to test at the end, we're coming to the end of this session. And I'm going to be looking to see how close we can come to agreement on some key principles that we have been discussing. Peter.

MR. KITZMILLER: Actually, Janet, I can't read your name tag. My understanding is we were going to do a disclosure, we were going to describe what the problem is. Am I understanding you to say that you would prefer not to have any kind of description with regards to whether it was repaired or not?

MS. SMITH: Yes.

MR. KITZMILLER: And would that be replaced with anything or we're just going to tell them that there was a leaky roof and that's all that we're going to disclose to the consumer?

MS. SMITH: No. Well, what I said was, it depends
on how broadly you draw the category of what is going to be disclosed. If the category is very broad and includes everything, maybe there is a need for some explanation.

But my comment was you're better off drawing that line at the beginning and not having that explanation. Because there is, number one, there is too much potential there for the explanation not being accurate or it being misleading.

Number two, allowing explanation as to why the vehicle was repaired or the defect was cured, particularly if they were bought back under the lemon law, is really kind of empathetical to what lemon laws are. A lemon law says if you don't do it within a certain time period the vehicle is a lemon. The fact that you may or may not do it later is something that should not enter into that equation at that particular repurchase point.

MS. HARRINGTON: It's not material to the repurchaser to know whether there have been subsequent repairs made?

MS. SMITH: I think in this situation where the vehicle was bought back under a lemon law --

MS. HARRINGTON: Uh -huh.

MS. SMITH: --no. I don't think it's -- Because the problem is it was the vehicle's history or the inability to fix the problem before that gave rise to the repurchase.
And to then allow a company who was not able to either
diagnose or fix the problem prior to that time to then say,
well, on this one time after we bought it back we shipped it
out to X repair facility and it's all fixed now I think
would be very misleading.

MS. HARRINGTON:  Lou.

MR. GOLDFARB:  There's a lot that's misleading here,
I think both the categories of the, the generic categories
of customer satisfaction. Customer satisfaction is really a
misnomer because it's only, you know, we may check that box.

But the fact is we disclosed what was wrong with it
and what we've done to fix it. We don't sell irreparable
vehicles. I mean, if someone is complaining about a problem
and we can't fix it, we crush it or we donate it to a tech
institute.

When someone complains about a problem and we have
made an effort to fix it, and we have fixed it, we will put
down repaired. Or we will put down could not find the
problem the customer complained about.

The point is that the subsequent buyer of the
vehicles gets notice, gets information indicating what went
on previously, which is someone complained about a
transmission.

The dealer went in to repair it. He either repaired
it or could not find the problem. And that's what the
customer is left with. And they can make their own judgment
a to whether they want to buy a vehicle under those terms.

These generic descriptions of, you know, customer
satisfaction, lemon law, arbitration board, I mean, that
tells people nothing beyond the fact that it was bought back
by the manufacturer, which itself is useful information.

But it would really be a disservice not to disclose
that the customer complained of the transmission, an effort
was made to fix it, the manufacturer believes it was fixed
or the manufacturer couldn't find the problem. Then the
second buyer can make the judgment as, on the basis of that
information. But that is necessary information.

MR. KITZMILLER: I'd just like to make one follow-up point on that. I mean, the customers get to -- if it's not
on there the customer is going to ask.

And I certainly think it would be better for the
person, the manufacturers in this case if they're the ones
that repaired the vehicle, to put down what they did to
repair the vehicle instead of having the dealer try to
determine whether, what they did or didn't do.

I mean, the customer is going to ask the question.
If you put down that this vehicle is repurchased for a
specific problem, they're going to ask what was done to
address that. I mean, I just think that's logical they're
going to ask that question.
MS. HARRINGTON: We are not going to have any more discussion on this issue during this decision. So if you can figure out a way to finagle your comments on this into the next session, good for you.

(Laughter.)

MS. HARRINGTON: I want to conclude this part of our discussion by just testing here to see where we are on these issues.

Is there anyone who disagrees with the proposition that the class of vehicles about which information should be provided includes both dealer buybacks, takebacks, and manufacturer buybacks, takebacks?

Is there any disagreement? Okay. Mr. Ducharme from Ford disagrees with that. Is there -- And Mr. Goldfarb from Chrysler disagrees also out of solidarity with Ford.

(Laughter.)

MS. HARRINGTON: Actually, I don't know that. The record should reflect that we don't know why Mr. Goldfarb disagrees with that.

(Laughter.)

MS. HARRINGTON: We have talked some about the notion that the following information should be provided on cars that are buybacks: That the car was bought back. A statement about why the car was bought back, where that statement has sufficient specificity to tell the repurchaser...
in a meaningful way why it was bought back. That is, customer satisfaction isn't enough; customer satisfaction because the customer believed that the brakes squeaked and they didn't stop squeaking would be enough.

And noting the disagreement of the Assistant Attorney General from Florida already, a statement that the manufacturer or the dealer have taken the following steps to address the problem or has done nothing.

That three part sort of disclosure. How many think that that would provide, that type of disclosure would provide the material information that the subsequent purchaser needs and should have?

How many think that three part disclosure would provide adequate and material information to the subsequent purchaser?

That's okay. We can --

MS. SHAHAN: It depends --

MS. HARRINGTON: No, no. I'm just asking -- you know, we can't have disclosures that depend. How many think -- I mean, you know, it either is there or it's not. So, okay.

Well, we have Ford, Chrysler, and GM. And the gentleman from the NADA. And the gentleman from the AIAM.

How many disagree that that disclosure -- How many, how many think that that disclosure is inadequate?
Phil Nowicki thinks that it's inadequate. PIRG thinks it's inadequate. Peter, Peter, what's your last name, Maier. And Steve and Rosemary and Janet and Jack. Was your hand up?

MR. GILLIS: I was scratching my arm.

MS. HARRINGTON: Jack was scratching.

(Laughter.)

MS. HARRINGTON: And the others of you abstain? And everyone else abstains. So that's where we are at the end of this first session.

We will, it is now 11:00. And we will resume promptly at 11:15. And the restrooms, as I said, are right out beyond the elevators.

(Whereupon, a brief recess was taken.)

MS. HARRINGTON: We are now starting the second portion of the program entitled Implementing Change. Would everyone please be seated and stop talking?

(Laughter.)

MS. HARRINGTON: If you don't stop talking, we're going to make you share with the class. Well, I think that the first session, I would say from my perspective it went well. I think that I've managed probably to annoy or offend everybody but the car auction people. But you're next.

(Laughter.)

MS. HARRINGTON: I need to remind everyone that we
do have at 4:00 an hour set aside for public participation.

And if you are here and would like to participate during that hour, we have three-by-five cards in the back, out in the foyer.

And you need to fill out one of these cards during the day with your name and your affiliation, if any. And we would like you to say generally what part of the agenda it is that you would like to comment on, discuss, or respond to.

And Tom Rowan from our staff, who is standing in the back door, the tall gentleman with his jacket draped stylishly over his arm, is the person who you should give your card to if you are here and would like to participate during the public participation part of the program.

And I will be making this announcement again and again as we go through the day. We want to make sure that anyone who is here who wants to participate between four and five has an opportunity to do that and knows how to do that.

And for those of you who have just come in, Jack, for example, I have observed that I think that the first session went well because except for the car auction people, I think I have managed to offend or interrupt all of the other interests seated around the table.

(Laughter.)

MS. HARRINGTON: And we're going to get to the car
MS. HARRINGTON: So we're now on to the 11:15 session, Implementing Change. I think that during the first section of the day we had discussed a great deal about information, the information that is currently being given to consumers.

I would like to focus beyond that now on information resources. So we're not talking here about the information that manufacturers and dealers and car auctions and others are presently passing through the pipeline to end-use consumers, but rather other information resources that may be available to consumers.

And I think that the main part of what we hope to discuss here concerns vehicle information number databases, the viability of establishing those and so on and so forth.

Does everyone understand sort of the general parameters of the discussion?

Okay. Well, let me just kick this off then with a basic question. What information resources are readily available to consumers to enable them, if any, to enable them to learn about vehicle, a vehicle's history? Let's just say car. Vehicle sounds like we're all on Cops.

(Laughter.)

MS. HARRINGTON: We know we mean motor homes, too,
and, you know, motorcycles and those little pickup trucks and things. We know we mean all that, but we'll just say car. Robert?

        MS. HARRINGTON: Or we don't know that.

        MR. GRAHAM: Actually, we really don't know that because I don't think motorcycles are covered under lemon laws. And I think anything over 10,000 pounds gross vehicle weight rating is not necessarily covered in the lemon law. So, just to mention that.

        MS. HARRINGTON: Cars. Okay. Well, we'll say cars mean cars.

        MR. GRAHAM: We can say cars among us.

        MS. HARRINGTON: Cars meaning cars. Richard.

        MR. RAINES: I assume you're not asking for an advertisement about Carfax.

        (Laughter.)

        MR. RAINES: We are obviously in the vehicle history information business. And dealers and consumers can get access to the history of a car if they have the 17 digit VIN.

        We generally have title information. And in four states that title information--the four states are California, Connecticut, Indiana, and New Hampshire--would include a manufacturer's buyback brand.

        So from that point of view, that's an information
resource that consumers can use or dealers use and pass that
information on to consumers that would notify them about
some elements of the history of the car.

MS. HARRINGTON: Adam, you have a follow-up question?

MR. COHN: I have a question for you, Mr. Raines, about Carfax. I'd like to know what types of difficulties your organization or other vehicle information organizations have in getting adequate information; and what types of things manufacturers, government, states, consumer groups, or consumers could do, what types of things would you like to see change in the industry, whether that be regulatory or not, that would make it easier for you to compile the information you need to get it to consumers?

MR. RAINES: That's a good question. I mean there are sources of information, earlier this morning we talked about warranty information. The manufacturers have warranty repair information.

We know in talking to our consumers and in consumer research that consumers are very interested in that kind of information in general. Even if it's confusing, they're still interested in it.

So that's one source of information that we believe would be helpful to our marketplace to consumers that get information.
Another element to your question I think is what happens at the state level in terms of the difficulty of getting this information. As I said, we get branded information about manufactured buybacks from only four states.

I think we're aware that there are up to 16 states, and I'm not sure how accurate my information is, that in fact have some sort of manufacturer buyback brand. So we certainly could use help.

And I think we've talked to various states as well as FTC about where that information is and how we could make, you know, get access to information so that we then could provide it to the consumer.

So there's a state level issue that we certainly, you know, are working on but, you know, we haven't made the full progress on.

MS. HARRINGTON: Lori. And let me just check, Adam, do you have any follow-up there?

MR. COHN: I guess I'd like to hear some more first. I think I will have a follow-up.

MS. HARRINGTON: Okay. Lori.

MS. COHEN: The American Association of Motor Vehicle Administrators is in the -- Oh, okay. The American Association of Motor Vehicle Administrators is in the process of building a system called National Motor Vehicle

For The Record, Inc., Waldorf, Maryland (301) 870-8025
Title Information System.

Congress said in the 1992 Antitheft Car Act, they said build this system to help prevent car theft. We are in that process. It will track a vehicle from birth to death. It will include any brands that have been placed on a vehicle, whether salvage, floor, or whatever. It can also include manufacturers' buybacks.

MS. HARRINGTON: Can, but isn't presently compensated to?

MS. COHEN: It is, it is programmed now. It is programmed now.

MS. HARRINGTON: Uh -huh.

MS. COHEN: It will have to have the reporting from the American --

MS. HARRINGTON: And when is this database going to be up and running?

MS. COHEN: It will be in pilot by October of '97, so this month it will be in pilot with five different states.

MS. HARRINGTON: This is '96.

MS. COHEN: '97, I'm sorry. Next year it will be in pilot with five different states.

MS. HARRINGTON: Okay.

MR. HILE: Which five states?

MS. COHEN: I've got it. Virginia, New York,
Indiana. I've got two others.

MR. GILLIS: Florida is one of them.

MS. COHEN: Florida is one.

MS. HARRINGTON: Florida?

MS. COHEN: And I don't remember the other one right now. Okay.

MS. HARRINGTON: And not Wisconsin?

MS. COHEN: Thank you. And New Jersey also.

MS. HARRINGTON: New Jersey, okay. And how will consumers be able to obtain information from that database?

MS. COHEN: We can work with the third -party providers, and they will provide the information to the consumers through -- they will have access to the system.

MS. HARRINGTON: "We" being the Motor Vehicle Administrations of the states? Or who's the "we"?

MS. COHEN: Through the system the states can work with third -party providers, okay.

MS. HARRINGTON: But consumers won't be able to get it directly?

MS. COHEN: They will most likely go through the third -party providers.

MS. HARRINGTON: And the third -party priors are? Give me some examples of who these third -party providers are.

MS. COHEN: It could be something similar to Carfax For The Record, Inc., Waldorf, Maryland (301) 870 -8025
or anyone who wants to use it, anyone who wants to provide this information.

MS. HARRINGTON: Well, are groups like, for example, the CFA or CAS, you know, cars likely to become providers? Is that, do you contemplate that as a fee-for-service arrangement. Or I mean what, how is this -- I'm trying to sort of understand how this information is going to get to consumers from this database.

MR. GRAHAM: Well, for our part, we still have IBM AT computers in our office. So the odds of us being anywhere beyond punch cards in the next ten years -- (Laughter.)

MR. GRAHAM: --getting on the Internet, being able to use the services of the databases is fairly slim. It's not really the business that we're in.

MS. HARRINGTON: Is there, Mr. Raines, you think that there's some sort of market for this information I guess.

MR. RAINES: We have a business that provides the information right now. Just to give you a sense of it again without making it an advertisement, eight million cars a year in the last year were checked through Carfax, used cars, for their history.

We have over three hundred million records of used cars in our database. It takes less than a second to get a
response from that database.

      We have a very technically sophisticated system.
We're due on the net two to three to four weeks. My staff's
here checking on the deadline. But we'll have an Internet
page up where the consumer can enter the VIN and access the
vehicle's history.

MS. HARRINGTON: Do you know how many individual
consumers used your, have, you know, dipped into your
database in the last year?

MR. RAINES: Consumers are not our primary market.
So of the eight million --

MS. HARRINGTON: Who is?

MR. RAINES: Dealers are our primary market, as well
as auctions that we furnish.

MS. HARRINGTON: Uh -huh.

MR. RAINES: And they provide -- Dealers in general
will do two things with information. They'll check out the
trade -in, make sure that they want to buy that car. Then
they'll show the Carfax information to the consumer to help,
you know, them understand what they're buying.

MS. HARRINGTON: Jack, you've got a pretty good
finger on the pulse of what, what the market is for
information, what the consumer market is for information.

MR. GILLIS: I, this is the first time I've heard
about this being available on a nationwide basis. And if
it's funded by Congress, I'd certainly hope the consumers are going to be provided access to it at little or no cost.

MS. COHEN: It's part of the act. This information will be provided to consumers, law enforcement officers. Junkyards and salvage are going to be determining --

MR. GILLIS: But not having to go through a third-party and pay extra for it.

MS. COHEN: I'm really not sure. I don't think it's a difficult thing. Our companies worked through third-party providers before. It's something that will be available to consumers. I mean, this is part of the act.

MR. GILLIS: I think there's a tremendous market for it.

MS. COHEN: This is something that every state will eventually participate in. So you're going to have it. Manufacturers can report right into it, okay, so that it will be on-line updated.

There is a similar bill out right now having to do with salvage vehicles, HR2900. And it requires owners of salvaged vehicles, insurance companies to report within 15 days, okay. And we can have a similar sort of requirement from manufacturers to get the information directly into the system.

MS. HARRINGTON: Lou.

MR. GOLDFARB: Yeah. I just had a quick question
for Richard and Lori, actually. And that goes to what kind
of security is built into these systems. I mean, there is
some concern among some of us that there is a very small
segment of the legal profession actually that tries to
access this information. I know, I know it's hard to
believe.

(Laughter.)

MR. GOLDFARB: From trying to access this
information for the purpose of creating class action
lawsuits and other misuses of the information. I'm just
wondering is there, is there, you know, ways that you, that
you can limit access to it, just the people who legitimately
need that information?

MS. HARRINGTON: Would somebody extend you the same,
you know, sharp rebuke that I did to Jack, you know, if the
representative from Chrysler wants to assume that a class
action lawsuit is a misuse of information, you know, that's,
that's your, that's your view but not necessarily the view
of the Federal Trade Commission in the past.

MR. GOLDFARB: I mean generated by lawyers. I'm
fine with consumers doing it, but lawyers are another thing.

(Laughter.)

MR. RAINES: We don't restrict who wants to have
access to our information. We clearly have security in,
security in our system. And generally a dealer of business
who has access has a, has an I.D. number and a password to get into the database.

But if someone calls us on the phone, if it's a consumer or anybody else, we provide that information to them. We're very careful about explaining what the information is and making sure that, you know, we don't come to any conclusions about the vehicle. But we can't restrict access to it.

We don't include, but I'm not sure if this is your question either, the name and address of the individual that owned the car or anything like that. So we've, we've, you know, drawn a bright line about the privacy concern.

MR. GOLDFARB: And is use of the VIN number the only way you can access the information?

MR. RAINES: Right. We will not provide other kind of analytical approaches to the data. We only, if you have a VIN, you can get the information about that VIN and that's it.

MS. HARRINGTON: Robert and then Janet.

And then, Lori, do you want to be recognized again?

MS. COHEN: Yeah.

MS. HARRINGTON: Robert, Janet, Lori, and Peter.

MR. GRAHAM: I've got a couple of questions for Richard and then one for Lori.

Richard, first off, I know that California, for
instance, and Virginia, they both restrict access to
registration record and I believe title records. Does that,
has those proposed any obstacles to you?

MR. RAINES: No. In both California and Virginia we
get their title data. California has, the only issue with
California has been they have not been in compliance with
TIMA, Truth in Mileage Access.

Some of their data about odometer readings is less
deep. And each state has different information. One of the
things we track is the odometer reading so we can look at
whether the odometer has been rolled back.

MR. GRAHAM: The second question is, I noticed in
the comment there was reference to a service called Paccar
which I believe is run through TC Corporation. I understand
they're probably competitors of yours. Do you have any
understanding of how their business is similar to yours or
different from yours?

MR. RAINES: Generally, you know, it's not good to
represent a competitor's exact information. I know their
primary source of information is insurance, from the
insurance industry when a car, their business when a car has
an accident.

An adjuster has to process, you know, evaluate the
amount of repair of that car. And the car may in fact be
totaled. And they pick up that information about whether

For The Record, Inc., Waldorf, Maryland (301) 870-8025
the car is totaled or not and went through the process of being totaled.

They're picking up information at a different chain in really the accident than the total history of that car. We're picking up information from the state, the official, whether it was branded or not. They're picking it up from the point, the time of the processing of the total is being done.

MR. GRAHAM: And my question for Lori, finally. The authorization for the establishment of this database back in 1992, did that actually explicitly include information concerning vehicle buybacks, manufacturer buybacks or was it limited just to stolen cars and salvaged vehicles, flood vehicles, and the like?

MS. COHEN: The purpose of the act was to do what you need to do to track that vehicle so that if it's stolen you'll have the information. If it's salvaged vehicles, if there is chop shops and things, it's trying to track the vehicles for all the reasons.

Since it's tracking brands for those reasons, manufacturers buybacks is a different category. But it's easily absorbed by it. And we've already planned in before we even knew of this hearing to track manufacturers buybacks.

MS. HARRINGTON: Let me ask you a question, Lori,
though. The one vehicle administrators in the comments take
a narrower view of what ought to be classified as a buyback
than do many of the other commentors. Is this database
going to incorporate the vehicle administrator's narrower
view, or might it use a broader definition?

MS. COHEN: It's been an interesting discussion.
Our assumption going in was that buybacks have a connotation
of lesser value and a safety problem, okay. We've been
talking here being inclusive; if you buy it back for any
reason, include it.

So we can still call it a buyback. It sounds like
something that people are saying, well, yes, we will call it
a buyback now and forever. I know that's a future
discussion, how long.

But our assumption is a brand or a buyback is a
permanent brand. From the discussion we have been having
here, you will need disclosures to explain serious buyback,
lesser buyback. And disclosure is another aspect.

Our particular system has the capability for vehicle
history. We need to look into that more, especially from
the discussion here today, how much history can this system
go ahead and track.

It's something that can, it can be accommodated but
I can't tell you right at this moment it will include all
the disclosures we've been talking about. But the
possibility is there.

MS. HARRINGTON: Okay. Adam, question?

MR. COHN: Just a follow-up question for Lori. The way I understand it is that it won't necessarily be a general -- what do you represent, the American Association of Motor Vehicle Administrators?

MS. COHEN: Yeah.

MR. COHN: You won't have your own standard definition of lemon, but rather you will take whatever a state determines, whatever a specific state determines that a brand should be on a vehicle, you will just include that on your database. But you won't impose or use any standard definition.

MS. COHEN: Correct. Right now for salvaged vehicles you've got every definition under the sun. States have all these definitions. At this moment we'll pass on whatever brand from state to state for whatever meaning that state has.

It's a lot better if you have one meaning for salvage. It's a lot better if you have one meaning for buyback. If we didn't have one meaning, we would pass on whatever there was.

But I would say uniformity in this case is important. Whatever -- if all buyback means is that you bought the vehicle back, at least have one understanding of
what they're talking about.

MS. HARRINGTON: But my understanding from you, Lori, is that you're willing to work with people. You think the association would be willing to work with people to come up with a broader definition than the Motor Vehicle Administrators might have held coming into this.

MS. COHEN: If it's uniform, easily understood, can be passed along, yes, um -hmm.

MS. SMITH: I had a question for Lori and then a comment about one of the things Richard said.

Lori, if I understand the comment that AAMVA submitted correctly, the way this title thing is going to work is the states will have to apply through some kind of grant type of program to be able to either utilize it or -- Can you kind of tell us a little more how it is going to work and whether or not there is money appropriated for these grants or is that something that you're still working on?

MS. COHEN: There was 890,000 appropriated from Congress to get it started. We just got another million that's going to get us through the pilot for those five states; possibly more can join us.

Once the pilot is complete and you have got your comments and your revisions and whatever, we open it up to
all the states. We are still seeking more Federal money.

MS. HARRINGTON: When do you think that will be?

When is that?

MS. COHEN: In one year.

MS. HARRINGTON: One year after the pilot starts?

MS. COHEN: It starts October, '97.

MS. HARRINGTON: Okay, so October '98?

MS. HARRINGTON: So hopefully October, '98.

MS. HARRINGTON: It will be opened up to all the states.

MS. COHEN: Yes.

MS. SMITH: And then they'll have to apply to get in?

MS. COHEN: We are seeking additional Congressional funds. We would, we want money to help those states participate. There's advantages to the states. Congress has said we want every state to be in it. We'll see what happens.

But we expect that states are going on this system. It's going to transfer things that they now might have to mail, titles and so forth. It is going to serve a lot of state interests.

MS. SMITH: And then my comment on what Richard mentioned was that one of the, as an enforcing and monitoring agency, our interest is in knowing who the person

For The Record, Inc., Waldorf, Maryland  (301) 870 -8025
in who buys that resold vehicle.

And that is one piece of information that Carfax does not presently provide. So I would just simply say that if we're talking about the kind of national database, that should be one piece of information that should be included.

MS. COHEN: I don't know if there is privacy concerns on that. We certainly were not planning on giving any previous owner information.

MS. SMITH: Not -- well, what I'm talking about is present, well, if you're looking for who it is that bought the resold vehicle to determine whether they got the disclosure they're entitled to, depending on what kind of disclosure there is, that's the, that's the identity we're trying to get.

MR. RAINES: Could I respond to that? We don't include the name and address. What our customers would typically do is at least they have the title number of the previous owner.

And if the customer wanted to pursue additional information, they would then contact the states and the states have different, you know, laws on disclosure and privacy. So that's how we would handle that.

MS. HARRINGTON: Lori and then Larry.

MS. COHEN: Oh, I, I said it.

MS. HARRINGTON: Okay. Larry.
MR. KANTER: We actually have some experience using the Carfax data. And I have to say that the experience we've had was not entirely satisfactory in terms of easy access to it.

I'd like to explain that. We gathered several hundred VIN numbers from state officials of cars that had been bought back. And at first Carfax was giving us the data of the title histories on these vehicles.

What we found after doing several hundred cars that our access was limited or restricted to getting further title history. And the way it was presented to us, if I can paraphrase it, was that we could have the data so long as, so long as we did not tie any particular manufacturer or dealer to a failure to disclose. So the question that we have will consumers have open access to the data in Carfax to other providers?

MR. RAINES: The answer to that is yes. They do now and they will in the future. And we're making the access more available. The concern that we have with any customer accessing our data, and we're very careful about it, is no database is perfect when you have three hundred million plus records.

And I think anybody who is trying to develop this kind of business can conceive what kind of challenges it takes. We have to be very careful that we don't have
conclusions drawn from our database about the condition of
the vehicle that would be tied to our company because that's
not the business we're in.

We're in the business of providing data, not
conclusions about vehicles. But there is no restriction on
access to our data by anybody. And in fact we believe the
consumer market is probably the most important market
ultimately for this information.

That's going to drive. You know, it's a need for
any buyer and seller of a car to, you know, have this
information. So we make the consumer access, that's why we
don't restrict it. That's why we felt that things like the
Internet would make it more and more accessible.

MR. KANTER: If the data were expanded to include
more of the kinds of things that we are talking about this
morning, would that raise more problems for you or would it
be just as completed for buybacks?

MR. RAINES: It would be, if that's a benefit to our
market, it's ultimately a benefit to us. And we know
consumers want more information. We know that they want
repair information. We know that they want accident
information.

The research has been done. The number one thing
the consumers want that they're not getting in terms of used
cars is more information about the history of the car. So
that's our market. That's what we're going to.

And we're expanding the way we allow consumers to
access this. And we're expanding the kind of information
about a car that they get.

MS. HARRINGTON: Peter.

MR. MAIER: Yeah. Carfax and the related service
are providing useful service. But I think it would be a
misconception to say that the information that we've been
talking about this morning is already available.

As a customer of Carfax on occasion, the information
provided is spotty. It doesn't always work. And I don't
know why that is. I'm not faulting Carfax; it's probably
because the input of data is incomplete.

But we're far from there in terms of consumer or
consumer representative accessing that kind of information.
And obviously the Motor Vehicle Administrators database will
move us in that direction.

But it's important to recognize that to a large
degree what Carfax or any other service can provide would
depend on the input. And it's only as good as the data
that's put in.

MS. HARRINGTON: I want to compliment everyone for
talking to each other and having actually some dialogue
here. That's what we were hoping for.

I have a question about the Motor Vehicle
Administrators database. If the database were expanded to include buyback information that goes well beyond what is required under state lemon law to be branded or, you know, if the notion of what's going to be included in the buyback category on this database is more inclusive so that it goes well beyond legal definition of lemon and that sort of thing, where would that information come from?

MS. COHEN: I assume we're talking about, we've been talking about definitions. How are you, what are you going to call this.

MS. HARRINGTON: Yes.

MS. COHEN: If a manufacturer has a buyback, they can call it a buyback with a disclosure for what it was bought back for. I'm not sure beyond that --

MS. HARRINGTON: So the information would come from the manufacturers.

MS. COHEN: They bought it back for a reason so they're providing the reason for the buyback. It would be the manufacturers saying that.

MS. HARRINGTON: And is this, is your designing this database and your data capture system, is it set up to receive information like that from other than Motor Vehicle Administration sources? I mean, how are you going to get this data into the database?

MS. COHEN: I would need to get back to you. I'm
not, don't have all of that information. But I will
certainly get back to you on it.

  MS. HARRINGTON: Allen, do you have a question?

  MR. HILE: And my question for you, Lori, is is this
system that you're setting up only prospective, or are you
doing what Carfax did, I believe I'm correct on this, that
you have old records that you put into your system from the
states? Is yours going to go back in time at all or is it
just from this point forward that your database --

  MS. COHEN: From the time they participate I would
imagine it's going to be that point forward. I do imagine
that's the way it would be.

  MS. HARRINGTON: All right. Let me test something
here. Let's assume that it's October of 1998 and the Motor
Vehicle Administrators database is up and running. And we
have, they have come up with a very inclusive definition of
buyback, getting back to our first session, that is more
along the lines of the definition that people who agree,
that is, the definition that the manufacturers weren't
comfortable with.

  Let's say that we're using that definition. And
that the manufacturers and the dealers are systematically
contributing data so that we have a very robust database in
this motor vehicle database.

  Is that an adequate information resource for
consumers? And this database is made available through third-party providers. And we're going to assume that there will be some sort of market there. Is that, will that do it?

Jack, put on your thinking cap.

MR. GILLIS: I think from our perspective, I think that will be a giant step forward, a giant step forward.

MS. HARRINGTON: Giant step forward.

MR. GILLIS: I mean it, obviously I don't want to go --

MS. HARRINGTON: I'm not trying to pin you.

MR. GILLIS: No. But I mean --

MS. HARRINGTON: I'm not saying that facetiously. I think that's a good answer.

MR. GILLIS: I think there is a few nuances and few details; I think Janet provided some of them. I think the fact you're getting a lot of stuff directly from the car companies. But I think the concept is terrific.

MS. HARRINGTON: Okay. Now, car companies, can you provide the motor vehicle database with this information?

Gerry.

MR. DUCHARME: Yes. Yes.

MS. HARRINGTON: Okay. George?

MR. VELEZ: Provided that we can work out the technical aspects of it and it isn't going to cost of

For The Record, Inc., Waldorf, Maryland (301) 870-8025
hundreds of millions of dollars, yeah.

MS. HARRINGTON: John.

MR. WHATLEY: I'm not sure we can do it for the cars the dealer buys back. I know we could probably do it with the coupons.

MS. HARRINGTON: You are definitely not Lou Goldfarb. Who are you?

MS. GLASSMAN: Jackie Glassman, also from Chrysler.

MS. GLASSMAN: Yeah. The same as George and John.

As long as we can work out the definitional standard. And obviously we can't provide what the dealer buys back.

MS. HARRINGTON: All right. Well, lets talk to the dealers.

Peter? What about what the dealers buy back?

MR. KITZMILLER: I'm not sure what the question is.

(Laughter.)

MS. HARRINGTON: The question is can you provide that information to the Motor Vehicle Administrators database?

MR. KITZMILLER: Certainly. Again, I think the same category that the manufacturers have, as long as there is a clear understanding as to when we're supposed to do that and what we're supposed to do and that there is not a major cost factor involved, certainly.
MS. HARRINGTON: All right. Discuss among yourselves.

(Laughter.)

MS. HARRINGTON: What do we think of this idea? It sounds to me like we may have, we have the potential in terms of an information resource for consumers. We may have something on the horizon here that at least prospectively would be of great benefit.

Robert?

MR. GRAHAM: Yeah. I think by the resounding silence that you're looking at right now there is not a whole lot of conflict on the value of the database. I think everybody sees that it's a good thing to have a good flow of accurate information. I think that we're not talking about substance or form of disclosures but rather we're talking about the conduit.

MS. HARRINGTON: Well, we're also talking about the content. We're talking about conduit and context.

MR. GRAHAM: So if you're talking about the disclosure that the manufacturers were uncomfortable with and that we abstained on, then I suppose to some extent I'm going to have to abstain. But I think that the, that the --

MS. HARRINGTON: Well, there has to be something in that. If the consumer groups abstain and the manufacturers are a little uncomfortable, we must be heading toward a
middle ground here.

(Laughter.)

MS. COHEN: Something we are looking for is we want to pass along as much as possible through the system. We are trying to decrease as much as possible papers that have to go from place to place.

You may have to come up with codes for defective idling for brake problems or a list of things, whatever it is. Excuse me. So we are looking to pass along as much through the system because that's the most reliable way so that when the vehicle changes owners, it's going to pass from state to state to owners.

MS. HARRINGTON: Okay. I'm going to go a little out of order because R. B. has his tag up and we haven't heard from you yet.

MR. GRISHAM: Thank you very much.

MS. HARRINGTON: Would you say your name for the recorder?

And actually what comes to mind, having been a former director of a motor vehicle commission for a state, is what sort of paperwork or paper processed at the time of transaction that the dealer would be responsible for once he
receives, he or she receives information either on a trade-in or whatever type of transaction we're having at that particular point and time.

And then where does that dealer actually physically send that information? Would it be to the State Department of Motor Vehicle? Are they going to be able to handle the influx of information?

Where is the clearinghouse of any database? Right now I contend it's with the motor vehicle departments. And if you're talking about adding more forms, as was just mentioned, if you added more forms on one end you're adding more detail.

And having been a state regulator, when you add that detail you add a heck of a lot of items that must go into that database. So from that perspective, where from the dealer point would such a clearinghouse be?

MS. HARRINGTON: Do you have an answer to that, Lori?

MS. COHEN: No.

MS. HARRINGTON: Okay. Well, there's a good question.

MS. COHEN: It's definitely to be worked out.

MR. GRISHAM: We would love to see it. We would love to see disclosure as much as possible. Because being at the very tail end of that marketing chain, it is our
people that the car comes back to initially because the customer has the dealer that they have to go back to to start unraveling this chain of where the information dropped out of the system.

And that is a very important problem to solve is where did the information get lost; not who's responsible, but where did it get lost?

Because when you're dealing in the type of, the number of transactions across the United States, and I can only speak for one state, from the years 1989 to 1993 we had about 15 million transactions per year.

Now, that was a medium -sized state. Now, throw in New York, Florida, and California and you've got another country in processing, data processing. And information drops out of the system.

And when it drops out of the system and then gets down to the dealer and customer level, and I stop there because what do you do?

MS. COHEN: Yeah. We need to get the information about that buyback into the system, not papers, but into the system and carry it everywhere the vehicle goes.

MR. GRISHAM: I, we agree.

MS. COHEN: Uh -huh.

MR. GRISHAM: No, no problem with that.

MS. COHEN: Okay.
MR. GRISHAM: It's the mechanics of that --

MR. COHEN: Right.

MR. GRISHAM: --that is just --

MS. COHEN: Absolutely.

MR. GRISHAM: That's the problem. And if we can come to some conclusions on that mechanisms, you're going to make our constituency very happy.

MS. HARRINGTON: Are the Motor Vehicle Administrators working with these people? I mean, who's working with you on the mechanics of this database?

MR. GRISHAM: We are working with Larry Greenberg.

MS. HARRINGTON: Okay. Who is Larry Greenberg?

MR. GRISHAM: He's the head of AAMVA.

MS. COHEN: He's the head of vehicle services area in AAMVA.

MR. GRISHAM: Right.

MS. COHEN: And the person I report to.

MS. HARRINGTON: Great.

Allen, do you have a question?

MR. HILE: I wonder if there might a paperless way of doing this through the Internet, for the dealers and manufacturers to enter it into your database?

MS. COHEN: We've got paperless proposals for transferring titles and all kinds of things. This system, paperless is exactly what now? What were you saying,
meaning when you say paperless?

MR. HILE: A paperless system for the data to get from the dealers, since we're talking about dealers here, into your --

MS. COHEN: Well, we are talking about having the dealers, manufacturers, whomever is providing that information, enter that information --

MR. HILE: The concern that I'm hearing from him is paper.

MS. COHEN: Yeah, no.

MR. HILE: It's more paper for us to do our --

MS. COHEN: We don't want the paper; we want the information entered. And there are precedents, by the way. This system has others already, as you were saying, how do manufacturers gets the information in. The system as already envisioned has law enforcement entering reports and getting it into the system. So there is ways to do it. I don't have the details on it.

MR. GILLIS: First of all, I'd like to, I hope that the AAMVA is getting consumer input on this whole process. I think it's really important. Ultimately we consumers are paying for it and we are the only true beneficiaries of it.

So I hope that you guys will set up some mechanism so that we can, or some other consumers can provide some

For The Record, Inc., Waldorf, Maryland (301) 870-8025
input.

Secondly, I think this solves a ton of problems. Sure, we can work out the details. I don't want to belittle the paperwork. But it gets back to what is going to be on that document or what is going to be on that printout?

I can't imagine a consumer in America who wouldn't add a dollar to the cost of their vehicle registration fee or whatever to get a valid printout of the history of that vehicle.

So it may even not be a cost factor. That whole issue can be taken care of. But what's going to be on it? And that's where I hope that you will look to consumer input as well as input from the manufacturers.

MS. HARRINGTON: Phil?

MR. NOWICKI: Well, you said at the end of the last session if we could a way to go back to where we were at the last session in this one, and I'm going to try and do that. I don't know how far apart we are in, you know, we were far apart on what the reasons are for the buyback; we didn't have agreement.

But getting back to the bright line and just in talking to manufacturers over the years and knowing sort of their feelings on positions, I think John Whatley indicated like in Florida if we had that bright line when someone filed for arbitration, that's something that is generally
acceptable.

Some states use a notice requirement. But if you had the reason for the vehicle was being bought back was just really one or two reasons, one it was bought back after notice of defect or after filing for arbitration or if it was like a court order, so forth, that is the only information there that really is the only real reason, I think it simplifies things for the people with the, the title branding people.

It helps gives you a mechanism now that's out there. You could tie it into some form. For example, in Florida, and manufacturers are very familiar with our form in Florida, and this doesn't necessarily have to be in the manufacturers, I mean, it doesn't have to be the state giving out a booklet, but we have a defect notification form.

Now what if manufacturers put in their warranties, something along those lines, that was triggered by this reporting mechanism, anything that was bought by, after that period of time was then fed into this database, does that add a little clarity or agreement here?

MS. HARRINGTON: Well, the next person on my list is Gerry. So I'm going to ask you to respond to that and then say whatever else it was that you have.

MR. DUCHARME: Thank you. The simple answer, Phil,
is yes, that would be an objective act that one could look at and use as a benchmark to decide whether is disclosable or not, even with respect to the use of certificates or any other kind of mechanism for so-called customer satisfaction purposes.

So in principle I think the use of something like that, as long as the message was clearly given to consumers as to when this is to be used and as long as there was some safeguards so that it would not be used inappropriately, I would think yes, that would be a good bright line that we could work with.

And if we were to use certificates that we discussed in our last session after the point in time where one of these documents was properly served on us, well, then we could very easily call that vehicle a so-called buyback vehicle and make disclosures with respect to it. So yes, the simple answer is yes.

The comment that I wanted to --

MS. HARRINGTON: Let me ask a question, though, of both of you. Since every state doesn't have the same requirement that Florida has and some states don't have a similar requirement, what do we get in the database about the vehicles that are purchased by consumers who live in those states where there isn't --

MR. DUCHARME: Which was the next part of my
MS. HARRINGTON: Yeah, okay. Gerry.

MR. DUCHARME: What we would like to see, quite frankly, is uniform standards throughout the whole country. It is incredibly difficult for a manufacturer who does business in all the states to be able to monitor all of the differing state laws, to be able to 100 percent comply with all of them, notwithstanding all of our efforts to do.

Cars, no doubt, are incredibly mobile things. And to have their transfer and their, you know, pedigree covered by individual state laws when in minutes a car can be in a totally different jurisdiction and with, you know, customers and with dealers in a totally different jurisdiction frankly is an issue that everyone should focus upon.

And I think all attention should be directed in getting uniform, preemptive legislation or rulemaking that would govern this, you know, throughout the whole country. We've talked about disclosure forms before.

Frankly, it's incredibly difficult for manufacturers to have different disclosure forms in different states. It's incredibly confusing to consumers who take the car from one state to another that maybe have two disclosure forms.

One, it doesn't comply with the law of the state where they were buying the vehicle. So we would push very much for some sort of uniform legislation.
Also, we at Ford are very much in favor of having a national database that would monitor the pedigree of so-called buyback vehicles.

But the caveat on that, we are not excited about having additional rules and additional requirements to overlay all the different regulations in all the states. We would favor a national database as part of a uniform Federal rule or regulation that would govern this whole situation.

We think it would be a very important part of such a rule. We think it would be incredibly consumer friendly. And for all the reasons we'll probably get into this afternoon when we get into this in detail, we would support it a thousand fold.

MS. HARRINGTON: Okay. Ed.

MR. MIERZWINSKI: Eileen, getting back to a point you had made earlier about getting more information to consumers and also about this, I don't know a lot, I don't know very much about this database at all.

But I think it is a step forward. I would encourage your staff, and I can provide you with names of people, I have some grave concerns about the cost to the consumers who seek the information.

And I think we have to worry about the chilling effect on them of if there would have to be a fee for a consumer to ask this database for information. And I
realize there is no such thing as a free lunch.

But the SEC went through a problem where it actually created a database and some monopolistic information these sellers thought that they had a monopoly on government information and wanted to resell government records for an enormous fee per hour.

Now, the SEC ended up, now you can get it on the Internet free, the Edgar database. And so I think that we ought to go down this line but at the same time make sure that we can get to the point where we can continue to provide more information to consumers at a lower cost.

MS. HARRINGTON: Has there ever been any thought, Lori, about somehow making the ability to search this database available on the Internet?

MS. COHEN: I really can't answer what's been, what's been looked into so far.

MS. HARRINGTON: Okay. Evan.

MR. JOHNSON: I guess I have more of a question than a comment. And I guess my question is of you, Eileen. You asked Jackie for us in general what we thought of this. And was I understanding your question to say, are you asking us if this ideally could take care of the problem or perceived problem? Was that the question or?

MS. HARRINGTON: No. No, no. I think the question is what do you think, what do you think of this?
MR. JOHNSON: I think everybody thinks it's good. I just want to make sure that it's clear that, and this could be wonderful. And even if you got it free, et cetera, I have questions whether it's, whether it's accurate. Because a lot of people still may not use it even though we're getting more into the computer age, no doubt about it.

MS. HARRINGTON: John and then Phil.

MR. WHATLEY: A couple of comments and a question, I guess. I enthusiastically second, enthusiastically second what Gerry said a minute ago.

But I guess I wonder, looking at this database, whether it's really going to be a full provision of all information the consumer needs or just enough to put them on inquiry notice that, gee, you better check out the history of this vehicle because it's a lemon law buyback or a manufacturer repurchase.

And I don't quite understand, I've had other discussions about this, and I'm not quite sure how much information is planned on being in there right now. I thought it was the title brand or.

MS. COHEN: Right now it is extremely minimal. And that's why I say brands will be passed on. Vehicle history, there is a capability there. It's not standardized. States have not been told you must carry X information. We would need codes.
We would need things where states understood uniformly you would have to carry certain vehicle history information. It is not planned into the system at the moment.

And I start out by saying we are open to that possibility. But it is not planned into the system yet. There is a lot that needs to be defined.

And also I just wanted to say you can't put in all the information that we've been talking about, you know, all the repair history and things like that. It would be lesser, less of what you could put into this electronic database.

We'd have to come up with that happy medium of something that's transferable and standard and still satisfies what the consumer needs to know.

MR. WHATLEY: Do you have -- follow-up. Do you have a -- question again. Do you have a projection as to how long it will be before all fifty or fifty -one jurisdictions are actually on this?

MS. COHEN: I don't have a projection right now.

MR. WHATLEY: We've got four or five --

MS. COHEN: We'll have it ready, tested, ready to go October, '98. We will be seeking additional funds so all states can participate. Some will without funds, perhaps.

Additional programs.
MR. WHATLEY: Well, it will take more, it may take
more funding from Congress; am I right?

MS. COHEN: We are seeking it. We are definitely
seeking it. It will help the states do it. It's something
they want to do. But I can't say say right now how many how
soon.

MR. WHATLEY: Thanks.

MS. HARRINGTON: Phil and then Peter.

MR. NOWICKI: Just to revisit what I said earlier,
the role of the Federal Government as far as that they might
want to play, recent research that I just did, nearly forty
states have some written notification requirements.

So it wouldn't be the Federal Government putting a
great burden coming in and saying maybe under Magnuson -Moss
under disclosure that manufacturers will provide a form that
consumers must use to notify the manufacturer of a product
defect, and that will go in the warranty or in the owners
manual materials.

And I think getting over that threshold is, and I
know it's a state rights issue, but it may be an issue where
the uniformity may in the long run be in the best interest.
What people are giving up in these other ten states, it's
not necessarily, well, now we are putting a notice burden
on, on consumers.

In many states some of the difficulty is that they
are not even aware they have to give them notice. So if you provide them with a form, our experience in Florida has been that that has worked out exceptionally well.

They get it. They use it, as manufacturers can attest to. And the role of the Federal Government might be to consider something under the Magnuson-Moss sort of disclosure aspect of the requirement.

MS. HARRINGTON: Peter.

MR. MAIER: The database we have been talking about is mainly of use after the resale of the repurchased vehicle. Because as a practical matter, the consumer buying a vehicle that's been repurchased already is unlikely to access that database at the car lot.

So that we also need to address how the information needed from that database and/or from other sources is actually given to the consumer at the point of sale and during the sales transaction.

MS. HARRINGTON: Has the AAMVA thought about that?

MS. COHEN: How the consumer will know? When it comes to branding, okay, that's not lots of disclosure information.

MS. HARRINGTON: Right.

MS. COHEN: But if you want to know if the vehicle has been branded, in the HR2900 bill for salvaged vehicles it proposes a sticker that you put on the doorjamb and it
says that is a salvaged vehicle, repaired vehicle, whether
it's been inspected or not. It's on the doorjamb. If we
want to use that same standard for one type of brand, we
could see use the same for another.

MS. HARRINGTON: Allen, a question?

MR. HILE: I have a question for Raines. How long
does it take a buyback brand to get into the Carfax
database? Would it be quick enough for it to be useful for
the first repurchaser of a buyback, before the purchaser --

MR. RAINES: That's going to depend on the process
of the state. That would depend on the process of the
states and, you know, what happens before we get it.

MS. HARRINGTON: How long does it take roughly?

MR. RAINES: Once we get it, we put it in
immediately. But it would --

MS. HARRINGTON: Can you give us a range of how long
it takes for that information to get to you after it's been
branded?

MR. RAINES: It's really state by state. I mean, we
don't know.

MS. HARRINGTON: Does it range from two days to two
years? Does it range from a month to two months? Can you
give us a --

MR. RAINES: What's the "it" here in terms of the
time limit so I can be more specific in the answer?

For The Record, Inc., Waldorf, Maryland (301) 870-8025
MS. HARRINGTON: What is the, how long, what is the lapse of time, how much time passes between the title being branded and the information reaching Carfax?

MR. RAINES: Anywhere from a week to a month probably.

MR. GILLIS: I have a question maybe Janet or one of the car makers could answer. Phil reminds me of the Magnuson-Moss Act. If this disclosed the fact that you did repair the problem, is that a warranty? And will I have any recourse if in fact you didn't?

MS. SMITH: That's an interesting question.

MS. GLASSMAN: I think the thing to remember is that every buyback has a warranty, has an additional, supplemental 12-month warranty that goes along with it. So any subsequent problems that may arise are always going to be covered under that 12-month warranty.

No vehicle goes out before it is repaired. And if it can't be repaired, the disclosure notice says that it can't be repaired.

The one problem that it sounds like in this system is that because it requires so much coding and specificity, the kind of information we were talking about before is going to be hard to put into it.

MR. GILLIS: Well, I'm not actually talking about
that system. I realize that's too much for AAMVA. But what
about the case where the guy said it had stalling problems,
you said you looked at it, couldn't find any stalling
problems. So now I have a stalling problem. Do you have
any responsibility there?

MR. DUCHARME: You have a 12-month warranty.

MR. GILLIS: So everybody gives an automatic
12-month warranty to every single car they buy back?

MR. DUCHARME: Every one that we resell we give a
12-month warranty. Ford does.

MS. SMITH: In Florida that's statutory also.

MR. WHATLEY: I'm not sure. I don't know whether
everybody does it in every state. It's required in a number
of, several states.

MR. DUCHARME: I thought a lot of the states
required that you warrant the particular problem. We go
farther than that and we warrant the entire vehicle. I
believe Chrysler does as well.

MS. GLASSMAN: Yes.

MR. DUCHARME: I think General Motors does, too.

MS. HARRINGTON: We have heard the discussion that
we were hoping to hear during this segment. And we have no
additional questions. The staff has no additional
questions.

We do have approximately four minutes and twenty-five

For The Record, Inc., Waldorf, Maryland (301) 870-8025
seconds left in this segment. Do any of the participants
have any additional questions?
(No response.)

MS. HARRINGTON: Otherwise, we can build four
minutes of additional time into lunch.
(No response.)

MS. HARRINGTON: Good. Well, you're doing very
well. We will resume promptly at 1:15.

Thank you.
(Whereupon, a lunch recess was taken.)

For The Record, Inc., Waldorf, Maryland (301) 870 -8025
MS. HARRINGTON: We have lemonade this afternoon that we are serving out in the foyer. So if anyone needs something cold to drink, go pour yourself a nice cup of lemonade.

We are ready to go with the first afternoon session talking about possible remedies. Although I would clarify that when we talk about possible remedies, we can draw an inference that we have concluded that there is a problem and that's not really true for us.

But some of the commentors certainly believe that there is a problem. And so in the afternoon session we're going to talk about how that problem, if it exists, might be remedied.

The comments reflected a pretty wide diversity of suggestions and thoughts about remedial approaches here. And I think that the gist of our questioning during this session goes to what combination of proposed remedies would have the desired result of giving consumers information, material information that they need. That's our concern.

Again, at the risk of being repetitive, the Federal Trade Commission's staff concern is with information that's available to consumers in the marketplace to enable them to make good purchase decisions.

So with that, let me open with the broad question
which combination of proposed remedies do you think would
give consumers the information that they need?

And while you're all thinking, I hope that you found
nice lunches in the neighborhood. The food situation has
improved immeasurably. Some of you who have been coming
here for years will no doubt notice that.

MS. PHELPS: I'll start.

MS. PHELPS: Within our industry, we are strictly
wholesalers. We feel in order for this to be effective, we
all have to strive for uniformity. And we see the problems
nonuniformity causes in our industry right now, i.e., with
salvage.

Where some states have a brand that another state
does not recognize, the vehicle will travel across to that
other state, the brand gets washed off, and the dealer and
subsequently the consumer well not be aware of the fact
until there is possibly a problem.

As far as remedies, we feel title branding, vehicle
branding is very effective if it is done uniformly so the
auctions will have access to that information. We realize
that in most instances the retail customer, the consumer
will not see the title since the lending institution will
get the title and the brand. Obviously the lending
institution generally does not look at the title itself.

For The Record, Inc., Waldorf, Maryland (301) 870-8025
So if in conjunction with you also brand the vehicle that it is whatever you want to label it, then it would be visible to the consumer.

Also, we find that a brand on a title is very effective because of the available databases. Most of the member auctions within the interplay access databases for brands.

So when they pass the vehicle on from the seller to the buyer, everybody is assured that the proper disclosures were made. And again, we beg to the body here that will decide of how to label the vehicles, that they will arrive at a uniform procedure because otherwise it will defeat the purpose.

MS. HARRINGTON: Thank you. Robert.

MR. GRAHAM: I think there are two concepts that are at play here, at least two concepts of some importance in my view in the way of disclosure.

Those two concepts are permanence and prominence. Prominence is important to the extent that that's what's required to get information to consumers, to make sure that they take note of the salient information.

And you can achieve that through, as Berta recognized, an on-vehicle sticker, something that will be prominently displayed at the point of sale before any consideration changes hands so that that information figures
into the consumer's decision whether or not to purchase a vehicle.

Permanence is important because we don't want disclosure just to go to the initial resale customer but for that information to go to subsequent repurchasers of the vehicle.

You can achieve that through title branding. You can achieve it through registration branding and a number of states can achieve it through something in the way of a doorjamb sticker, although there are going to be certain unscrupulous vehicle owners who are going to peel off that doorjamb sticker.

But now you've got the theories there. And I think if we keep those, keep both prominence and permanence in mind, I think to the extent we're able to achieve that we're better off.

MS. HARRINGTON: Lori?

MS. COHEN: Yeah. Just to be very brief, I agree with Robert that you want to have the, to show that there is a brand to have the sticker on the doorjamb. That will help the consumer at the time of the purchase. And then to ensure that it's carried from owner and owner, do the title branding as well.

MS. HARRINGTON: Gerry.

MR. DUCHARME: We'd like to see, frankly, use of the
Used Car Buyers' Guide as a mechanism for disclosure at the retail or at the point of retail sale. And that coupled with the 1-800 number of the central database that we talked about this morning seemed to me to be a mechanism to ensure discontinued disclosure.

Title branding, you know, typically isn't as effective as a lot of people would like to think it is. But normally people don't have sight of their title until after they've paid for their cars. Most people finance their cars.

So in terms of being a mechanism to inform the consumer of the pedigree of the car before they take their purchase decision to my mind is largely ineffective. So it's one of those things you do when you have to do.

And I guess a lot of states require that we do it so we do it. But in terms of effectiveness and in terms of bang for the buck, in terms of the money we spend doing it, I really don't think it's there in terms of consumer benefit.

MS. HARRINGTON: Lou?

MR. GOLDFARB: We agree with what Robert said a few minutes ago about permanence and prominence. What's even more important than that is content; what are people being told?

You know, the State of California until January of
this year had the requirement to put on the brand on
vehicles that qualified to the consumer warranty law,
warranty wrecked or warranty returned, abbreviated to
warranty wrecked.

No one knew what that meant. Finally, after seven
years they decided to modify that to lemon law buyback, I
think. But the point is that we still have to wrestle with
the issue of what is disclosed through whatever, you know,
uniform nationals?

I agree it would have to be uniform. Maybe a term
manufacturer buyback would cover all these buybacks and then
it would also give disclosures that we were talking about
earlier of what was claimed to be wrong with the vehicle and
what was repaired.

Just to have a uniform system that has information
does not give you very revealing or could be misleading to
the consumer. I mean, lemon law buyback is a misleading
term.

It doesn't say a lot. It may overstate the extent
of the problem. It may discourage someone from buying a
vehicle that could be in very good, good shape. So I think
we need to focus as well on the issue of what is disclosed.

MS. HARRINGTON: Steve.

MR. TATERKA: Let me respond to something that Gerry
said about the title branding. And that was also raised I
think in some of the comments from some of the other industry folks.

Obviously in most states the lender holds the title so that the customer isn't going to see the title right away. Obviously, in a cash transaction of course they would get the title.

In those states where the lender does not hold the title, the customer would see it right away; I know Wisconsin, I think Kentucky also, there is a few others. But the purpose of title branding isn't to in and of itself give the disclosure to the customer. The purpose of title branding is to make sure that the chain of disclosure continues every step down the line. Because if you don't have the title brand, there is no way to know. I mean, the manufacturer may do a superb job of giving the disclosure to their franchise dealer when they sell it at a closed auction.

Whether that dealer retails it or wholesales it to a dealer, another franchise dealer or an independent dealer, the manufacturer has no control over that. The one thing that's constant is the title certificate with the branding information.

Likewise under the Federal Odometer Act, it's the, the Federal law already now requires that there be an odometer brand on the title every time a title is issued.

For The Record, Inc., Waldorf, Maryland (301) 870-8025
And that's the information that a customer can use to impute knowledge to the seller that the vehicle has a certain amount of mileage. And likewise a title brand for buybacks can do the same kind of thing.

So I just want to sort of clarify that the purpose of the brand is not to directly give disclosure to the consumer but so that you can impute knowledge to the seller that the vehicle is a buyback and consequently make sure that the seller has an incentive to give the consumer the appropriate disclosure.

MR. WHATLEY: I guess a lot of our reservations about title branding has to do with the current situation. Because it doesn't do that now because only a few states have it and there are ways that the brands can get lost from titles.

Not only does it not provide the disclosure to the consumer at the time -- we can quibble about whether it really does or not. It doesn't provide a reliable source of the, for law enforcement purposes because things can be done to lose the title.

We prefer something that, A, gets notice to consumers who are the ones who really care about giving notice to. And two, we can have some assurance that essentially it's going to get from us to the ultimate
And the only way I know of to do that, and it's not the perfect way, is through a series of contract disclosures where each and every person in that chain has the responsibility to pass that information along and have some evidence that they passed it along in case there's a need to track back up and find out where that information would arrive, where it was lost.

Title branding might be just, not only does not provide consumers the information they need, but it is just not very reliable in the current state of things. We need a uniform, maybe if you had a uniform standard that was nationwide, title branding would have to provide some information. But it doesn't in the current circumstances.

MS. HARRINGTON: Peter.

MR. MAIER: Yeah. On the question of title branding, it does, I agree with Steve, it does have a useful purpose in perpetuating the information.

In addition, it does have some information to the buyer, because typically it also goes on the registration. And even if the buyer does not see the title if they finance the car, they do see the registration.

But I think what we really need is a blend of information. There are five things I think at a minimum will be required. Because these things serve different
purposes.

One is to have a disclosure on the car itself of its repurchase status. That is, some kind of window sticker. Because that information is a part of the, it then becomes a part of the informed bargaining process in purchasing a car or not purchasing a car. I think that the door sticker is useful. Ford apparently is doing it or is about to do it.

MR. DUCHARME: We do it nationwide.

MR. MAIER: You are doing it now? Starting?

MR. DUCHARME: Starting four months ago. Thank you.

MR. MAIER: Four months ago, okay.

MS. HARRINGTON: Do you have one of your stickers here?

MR. DUCHARME: I sure do. This is the only, the only one we use in California. The nationwide one I don't have a copy of. But this is the sticker. It goes in the doorjamb. It looks small from a distance, but a doorjamb isn't that big. So this is the sticker. And it goes on a doorjamb right below the VIN.

MS. HARRINGTON: Could you pass it around so that we could all --

MR. MAIER: Yeah. That would be very useful.

MR. DUCHARME: I've got a couple of them here I think.

MR. MAIER: And there is the model for that of
course under the odometer law which has a similar kind of sticker. Granted they can be removed, but at least it, if somebody removes it they are themselves doing a bad act.

And so that has a, that has the kind of purpose that the title branding has in terms of permanence but in a different form. There's title branding, which we've talked about.

Then I think it's important that there be a point of sale disclosure which would typically happen towards the end of the sale process. And that would be a form used in some states, and I have an example from the State of Washington, what the form they have.

And the critical point here is that it's signed and dated by the consumer. The consumer retains a copy. And so there is an actual instrument that demonstrates the disclosure was actually made.

And then there is the database, which would be the fifth way of doing it, which would be a way of both for the dealer to access information to confirm, make sure that something hasn't gotten lost along the way.

And if there is a question that arises later, somebody is having difficulty with their vehicle and they suspect perhaps incorrectly that this might have been a repurchased vehicle, they can confirm or have their suspicions allayed by accessing the database.
These things, no one disclosure or information perpetuation mechanism by itself is going to work. You need to have these things work in concert.

MS. HARRINGTON: Adam, do you have a question?

MR. COHN: Yes, about title branding. Someone said earlier that title branding, the purpose of it was for continuity.

With regard to that, to what extent is it important that there be a single, I heard some talk about there needs to be a single title brand.

But wouldn't the purpose of continuity be served merely by requiring one state to at least acknowledge that another state has branded that title?

Wouldn't that serve the purpose of continuity without necessarily coming up with some sort of mandatory statement that it would have to be branded on all titles?

For instance, if you had a California title, merely be required to say branded in Wisconsin and not really necessarily give the entire statement that Wisconsin might require. What do people think about that?

MS. HARRINGTON: Steve.

MR. TATERKA: The question of how to deal with carryover brands is really more of an issue in the salvage business already because you've got states using completely different brands.
And states have taken two approaches. One has been to simply carry over the other state's brand literally. The other has been to convert it to what they believe is the closest brand.

I guess for, I mean we're going to talk about uniformity later on this afternoon. But I suppose, at least to respond to your question I think, it probably would be useful for there to be a uniform title brand so that, you know, addressing, you know lemon law buybacks.

Now what that brand should be is something that I'm sure can be the subject of a lot of discussion. But something that certainly would be understandable and would be the same might not be a bad idea.

MS. HARRINGTON: Gerry.

MR. DUCHARME: I find some of the things that are being discussed here to be a little bit disturbing because I gather that we are talking about adding things to what other people are, what manufacturers currently are doing. And I think that's most troublesome.

What we would like to see is a fresh set of rules that would make the right things happen at the right time. Not, for instance, the gentleman from Washington mentioned that we have to do all of these things.

We have to have the paper there. We have to have the database. We have to have the sticker. We have to have...
I don't know God knows what to make sure the consumer knows.

Well, there is a point beyond which people just shouldn't have to tread in terms of complying with these kinds of rules and regulations. We all share your goals.

As a matter of fact, Ford has been in the forefront in making sure there has been adequate disclosure to the consumers. But you can overregulate. You can overkill. And very frankly, I think if we were to follow along those lines I think we'd be in the overkill area.

In terms of title branding, I really wonder whether that's overkill if we have a national database. That's something that's permanent. That's something that a consumer is going to have reference to, he's going to have recourse to any time at all.

If someone goes to buy a used car, they can call a 1-800 number, they can punch in a VIN and they can find out whether there is something they ought to know about that car. That's there forever, and that's there potentially before the consumer buys the vehicle, not six months after when he pays for it.

MS. HARRINGTON: Okay. Let me stop right there, Gerry. For those who are recommending that part of the mix include title branding, if there was a national database and an 800 number that consumers could access to search by vehicle identification number, would title branding be
necessary?

    Lori, Steve, I want to ask both of you to respond to that.

    MS. COHEN: I don't see how it would not be necessary. Our plan right now for National Motor Vehicle Title Information System is to do pretty much what Adam was saying.

        If California branded it as salvage and Wisconsin takes it in, Wisconsin will have to carry the brand but they'll have to know it came from California and apply that definition.

        It gets confusing. We'd rather have a uniform definition. You'll have to go back and look up which state it came from and how they define salvage.

        So National Motor Vehicle Title Information System will carry over the brands. But uniformity would be much nicer. So should there be a brand? I think you need it definitely with the system. I'm not sure how you could not have the brand. I'm not sure about your --

    MR. DUCHARME: Can I plug in? I think there is a misunderstanding what I was saying.

    MS. COHEN: Yes.

    MR. DUCHARME: If we define what is caught by our overall regulation, in other words, what is a reacquired vehicle, if we are able to define that, and we were talking
about that this morning, let's say we have a category of vehicles, the rule could be that when a manufacturer has one of these, right, then the manufacturer is obligated by law to put certain information on the database.

And it doesn't matter whether that vehicle has been branded. That's got nothing to do with it. The important thing is that the data gets from the manufacturer to the database and that consumers have access to it. And whether the title is branded is to my mind totally irrelevant.

MS. HARRINGTON: Steve.

MR. TATERKA: See, I don't think you can separate the two. Because it's the, normally when the title is submitted, in states that now require title branding, the manufacturer submits the title from the first owner, the person that the car has been reacquired from, along with the title application, that goes into the state motor vehicle division.

And then they will issue a new title to, you know, in the manufacturer's name with whatever the appropriate title brand is for that state. That creates the computer record which Carfax now picks up and presumably, hopefully MVA will pick up on their system also.

So the fact that that title brand appears on the title itself, that's not out there alone. I mean, it's that computer record that the databases pick up which would
provide the information that consumers could then access via an 800 number or otherwise.

MR. DUCHARME: I guess the point is where is the source of the core data? You're saying the source of the core data ought to be the vehicle registration bureau in the state.

I guess I was saying what's the matter with having the manufacturer be the source of the data to the central database? If the manufacturers were the source of the data, you wouldn't have to go through other bureaucracy within the state to have them input the data. So I think that's where we differ, I think.

MR. TATERKA: I'm not sure the proposals are mutually exclusive. I guess to answer Eileen's question, which was if there was a database would we also want the title branding.

When I heard the question I understood it to mean not necessarily a separate manufacturer-run database. But again, you know, I don't know how many consumers would access the database, how many consumers would have knowledge of the database. I mean, I would still want the title branding.

MS. HARRINGTON: Question, Allen?

MR. HILE: Yes. This is for Lori. Under the current state of the law that governs your pilot project and

For The Record, Inc., Waldorf, Maryland  (301) 870-8025
your, whatever administrative regulations you have, would you be able to put data into your system without the predicate of a title brand?

Could you do what Gerry is suggesting here and take information directly from the manufacturers and possibly the dealers and put it into the database without it being a brand? Or does the law contemplate as a predicate to putting it in your database it has to the supplemented privately?

MS. COHEN: The very way that this system is organized, it has four files. The VIN is the pointer and it gets you to everything else.

The other files on it is theft, an MCO, and the brand file. And for us to identify this as a buyback, it's the brand file that's key.

MS. HARRINGTON: But earlier when we asked whether you could expand that, you said yes, you could.

MS. COHEN: Okay. There are --

MS. HARRINGTON: There wouldn't have to be a brand.

MS. COHEN: All right. I have to explain a little more about the system. There is the VIN pointer file. And the pointer file has certain minimal information. It won't even have driver name, not driver name, owner name or address.

To get more specific information from the VIN file
about who owns the vehicle, you shoot the inquiry to the
state itself which holds the more complete database. It
helps for privacy purposes that way, too.

So you're getting the more specific information out
of the state itself. The state would hold the vehicle
history information, the more specific information. It's
hard for me to explain how they all interact. There's a
brand file, there's a VIN file, there's a state file, but.

MS. HARRINGTON: Well, earlier when we were
discussing this database, my understanding was that it
would, that it will be possible with this database to expand
on the information that it captures to include, if we wanted
to, if you wanted to, if the world wanted to, any car that
was subject to a buyback, that that information could be
captured and used in response to a VIN search.

MS. COHEN: There will be a brand file that connects
with the VIN file, yes.

MS. HARRINGTON: But I guess what we were, the
assumption there is that we're going well beyond cars that
have branded titles.

MR. COHN: Um-hmm. I don't think I better speak to
how it works. I have got people who can help on the how
later. But I can't really provide that information in
detail that you want.

MS. HARRINGTON: Okay. I'm not, I don't think I'm
interested in how; I'm more interested in what. And that is what can, what could this database capture and produce in response to a consumer query?

MS. COHEN: Right now I'd have to say we're very open. It is brand oriented. Vehicle history is a possibility that has not been developed much at all.

MS. HARRINGTON: Okay.

MS. COHEN: It's a possibility. And it's really wide open at this point because it's not very well developed as part of the system. But the possibility is there.

MS. HARRINGTON: Okay. Lou, you've been patient.

MR. GOLDFARB: Actually, my comment is going to respond to Adam's question awhile back. But I'd like to say a few other things, too.

I think, you know, it's very hard to divorce the issue of what should be done about it without acknowledging the magnitude or lack of magnitude of the problem. I understand there is good reason not to get into that, but --

MR. GILLIS: No, that's all right; you can get into it.

MR. GOLDFARB: I agree with --

(Laughter.)

MR. GOLDFARB: Actually Jack's learned a lot today.

(Laughter.)

MR. GOLDFARB: He has a better understanding of the
situation. But I have to agree with what Gerry said and expand on it a little bit. And that is we are really getting to overkill here.

I mean, first of all when you talk about title branding, and this is responding to Adam's point, it would be very difficult, Adam, to direct the state DMV to do what you suggested.

You have to understand we've had a lot of experience with one DMV in particular. You know, they have a lot of responsibilities. And let me say this as charming as I can. They have a lot of responsibilities, DMV's do.

And they just, you know, I mean, I will say for the first four or five years of California's law, title branding law, the DMV didn't even know how to do it. I mean, dealers from all manufacturers were submitting information to the DMV and not getting the vehicles branded.

In fact, last week the DMV were sending letters out to owners telling them that they now have to retroactivity brand vehicles that should have been branded years and years ago.

So it's a very complex thing. It's another level of bureaucracy that has to be imposed on the existing already busy agency. And I just don't think it's going to get done.

But even more important than that, I mean, title branding is just not that useful in any way along this
process. It really isn't. I mean, the most important piece of information is the information that's given at point of sale.

I mean how many consumers are really going to go into their computer and access some national database when they're contemplating buying a used car? All right? I mean, these are people that by used cars, okay.

And they see a good deal with a car that was bought back by a manufacturer. They see it's costing a lot less than the blue book is for that particular vehicle. They go in. And the most valuable information is what they get at point of sale.

And, you know, we make every effort to see to it that these disclosure forms go through the whole process. I will acknowledge that in many instances they don't. In some instances they don't.

Very often when dealers sell cars to other dealers, dealers of other brands, those forms don't necessarily follow. And greater efforts can be made to make sure those forms follow.

But the really best disclosure is that which appears at point of sale when someone is negotiating to buy the vehicle. That's when they can negotiate a lower price for whatever they see in this disclosure.

To have all these high tech overlays, it's nice. I
mean, it's nice in theory and we have the equipment and the
computer technology to do it. And it's interesting.

    But when you really get down to it, (A) you can't
impose these huge responsibilities on DMVs, they don't have
the resources to do it; and (B) I'm not sure how meaningful
it is to get into this massive title branding on a national
scale and try to get that information out there.

    MS. HARRINGTON:  R. B.

    MR. GRISHAM: Looking at it further down the chain,
when the vehicle, whether or not it's branded or not, but
let me first start by saying branding from our perspective
helps. From a used car dealer's perspective, it helps.

    Because it's preserving the chain. It's preserving
what that vehicle has gone through. I've heard a lot of
discussion about the brand may or may not be meaningful, so
I come back to the word uniformity which is all in what
we're trying to work out.

    But on the other side of that equation, when you
come down to that title being branded, it gives the
information that can be traced back to where and what
happened to that vehicle.

    And the states are the repository of that
information right now; have been. So what, I go back to a
little bit, what I said a little bit earlier, it's when that
information drops off this chain is where we need to have
the brand or the information recorded in a proper fashion so we can find out where that information did drop off.

And we're talking about remedy, that's where we can go back and discuss how and why that information dropped out of sight. So we feel like that branding is a part of this, as long as I come back to the term uniformity.

But branding ensures that the information gets passed by transaction by transaction by transaction. And the states are already the repository of that information. And it's used every single day.

Titles in most states have to be present at the dealership to sell the car. I know in the State of Missouri you cannot sell a car unless the title is present at the dealership. And a lot of states have that.

And as long as we hold dealers responsible for what they should have known at the time of the sale, then you have got to give the dealer the opportunity to go back through the chain to find out when this information was lost.

MS. HARRINGTON: George.

MR. VELEZ: Yeah. I guess a couple of comments. When you're introducing complexity into anything, and in the chaos theory, the people here, they can expound on it, but anytime you ask our field people to do one more thing, you increase multifold the chances of it not getting done or not
getting done right.

That goes to Gerry and Lou's point about you need to simplify this thing. You can't just keep adding layer upon layer upon layer on this and hope that we're all going to be in compliance because it's going to get hopelessly chaotic and everything is going to go wrong.

But I think, there is a lot of us who think that something is doable. But it goes back to uniformity and it goes back to keeping it simple.

This form that we developed we developed specifically with the State of Pennsylvania to settle some differences we had with them. They approved the form. It was the first of its kind. And now everyone thinks it's useless and, you know, confusing and everything else.

I mean, it just shows you what happens. And, you know, we tried adapting it to different states' requirements. And that's why it gets longer and whatever. And you want to keep the print big so you don't get accused of making the print small.

And everything you do to try to accommodate someone because there is so much distrust gets interpreted as trying to evade something.

So I think it's just absolutely paramount, you're going to drive up costs dramatically. I don't think anyone here wants to see consumers pay more for cars. I know we
don't.

I mean, whenever we price vehicles, one of the things we take into consideration is, you know, there's a segment of the population that can't afford these vehicles anymore.

And it's just, it's driving costs up and it's driving compliance down because it's just so hard to do. So I just, I think we've got to simplify this thing.

MS. HARRINGTON: Phil, and then we'll go to Adam for a question.

MR. NOWICKI: I don't really have a position one way or the other on title branding. I would just in our experience with our investigation in Florida, a number of problems we have had are "6"s look like "G"s in the VIN and "8"s look like "B"s and "4"s "Y"s, "1"s and "L"s.

Sometimes it doesn't have all the characters. And one of the things we were able to do if we had the title number was run it that way and to find the VIN that way. And sort of as a cross-check mechanism it has some value.

Now, if there is some other mechanism out there that's going to help you make sure you have the right VIN for the right car, maybe there are other alternatives. But we saw value at least in accessing the title from that perspective.

MS. HARRINGTON: Adam, question?
MR. COHN: About, about the necessity for our uniform title brand. I still don't think I'm clear on the issue of the importance of branding in terms of continuity. Because it seems to me that after October, 1997, at least, a dealer would be on some sort of notice for any car if there is a database that the dealer could just access and see whatever brands were on that VIN in any state.

You wouldn't necessarily have to have a title that said branded in whatever state. You could have a title that was free and clear of all brands to your, to the best, you know, just looking at it.

But if you dialed that 1-800 number, you'd see that there were four brands on that car. And I still don't know, I'm not convinced that requiring the states to do anything to change their branding would achieve anything, or even to require them to carry over a brand from another state once you had an adequate functional database. I mean, I'm not sure I understand --

MS. HARRINGTON: Are you addressing this? Who are you addressing this to?

MR. COHN: To R. B. particularly.

MR. GRISHAM: Having experienced both sides, my experience is over on the salvage side, so let me step back on that side as opposed to the lemon side. But let me tell you that it, the dynamics is probably a little bit different.
on this side of the equation.

But it's very easy when there is no uniformity to wash a title from state to state to state because it gets dropped in the mechanism. And again, states don't recognize other states' brands. They don't recognize other states' legal descriptions of that vehicle.

Now, what the specs on the AAMVA system that I've seen shows us that a pointer system, if you will, toward the problem could exist and function and work. But if you start dropping the problem from state to state to state transaction, then the pointer system, once again I go back, the information is going to be lost.

If Alabama doesn't recognize Mississippi's brands in some sort of way, then if that brand is lost the information is going to be lost and the information is not going to be transmitted at the point of sale when it's finally between the consumer and the dealer.

MR. COHN: Presumably the brand is still on the database. Just because it's not on the title itself doesn't mean that the record of that car having a brand is lost.

MR. GRISHAM: So the question becomes the point of knowledge. If the dealer does not know, and again say he purchased the vehicle at a wholesale level or say he takes it as a trade-in. And he takes that vehicle as a trade-in and there is no brand on that title, what would give the
dealer the idea that maybe I should check all of my brands or all of my vehicles on the lot?

Maybe from a business standpoint that's a very good practice. But from a business standpoint also it's going to be a very expensive practice. Because there will be a charge somewhere along the line for the utilization of these databases because you don't build them for free.

And the other aspect of that is, if it's right there on the title in the dealership, then they don't have to check; it's there on the document. And now that document is being, is required to show to the consumer.

And there you have the problem solved at the point of sale: Here's the disclosure, here's the information on the car, now make the decision on whether you wish to purchase or not.

Now again, that's how it's supposed to work on the salvage side. And it doesn't always work that way. But on the, on this, on what we're talking about here where you don't have any, and I go back to uniformity, we're going to have to come up with some pretty basic definitions before we can move towards this uniformity. But then I think branding is a part of that ultimately.

MS. HARRINGTON: Berta.

MS. PHELPS: As I said earlier, uniformity in our business is really very important. It's one of the most
important factors. We examine, our member auctions examine
literally millions of title documents a year.

And if you don't keep the process as simple as
possible for our industry and for the dealer industry and
for the AAMVA industry, the Motor Vehicle Administrators
themselves, I really truly believe you're losing the control
of it.

Branding the vehicle itself is very effective. You
might not have the document in front of you. You might not
have access to the title base at that point in time. But
you certainly can open the door and the doorjamb is labeled
that it is a, whatever you want to call it.

That is a visible fact. It's a visible fact for us.
If it's a dealer, he opens the door, he can inspect the
vehicle. He knows immediately, i.e., the odometer is not
right or it's branded or it's salvaged.

So again, I really have to ask that all the parties
involved look at the simplicity of it. To pass on the
documents, the disclosure documents on the initial sale is
good.

We dispose of dissatisfaction buybacks or
satisfaction buybacks for the manufacturer. We pass on the
documents. The manufacturer sets very stringent
requirements on the auctions to pass down the documentation
that goes with the car disclosing why the vehicle was bought.
back, what has been done with it.

The purchasing dealer has to sign for that. But you cannot expect that these documents will follow the life of a car; that is impossible. Because most likely within possibly another year, another two years, that car will get sold again.

And it then will truly go out into the used car wholesale market. And there is no way you can expect those written documents to follow the vehicle.

So we need to come up with some procedure that lets the subsequent buyer --and I don't mean the first buyer on the dissatisfaction buyback but the subsequent buyer --know, hey, this is really a dissatisfaction buyback.

And whatever procedures, they need to be simple. You cannot expect the public nor can you expect again the dealers and the entire motor vehicle community to deal with this massive paperwork.

MS. HARRINGTON: Rosemary.

MS. SHAHAN: I'll probably make some history here by agreeing with Lou Goldfarb of Chrysler --

(Laughter.)

MS. SHAHAN: --that the bottom line interest is in getting disclosure to the consumer that's usable at the point of sale or prior to the point of sale. And I'm not sure, I don't think I have the answers on how to resolve
with the database and title branding because there are other people more experienced with that end of things.

I just wanted to raise a question I haven't heard raised yet and see if people could address it. And that is a concern that we have that sometimes the buyback vehicle gets, especially when it's a trade assist kind of transaction, it's back on the lot really fast.

Sometimes the vehicle is bought back and changes hands, is on another dealership's lot within 72 hours, say, and is up for sale again. And I'm concerned about how long it would take to get information into a database and get people who are to go along.

And I know that that's actually been a frustration that some of the car companies have had with complying with different state regulations is how do you get the state DMV to do everything that it has to do, the documents have to be recorded if the vehicle's up for resale.

MS. HARRINGTON: As we go around, if anyone has an answer to Rosemary's question about delay or timeliness, we'd like to hear answers to that.

Steve.

MR. TATERKA: I just want to respond to some of the industry comments about, you know, chaos in the automobile titling system and so forth if we go to some kind of national title branding.
Right now the only thing a manufacturer has to do in the states that require title branding is to simply apply for a title in their name and submit whatever form to DMV that says this car has to branded as a buyback. That's all the manufacturer has to do.

In terms of what the Motor Vehicle Divisions have to do, they just have to brand it that they already are geared up to put all sorts of brands.

I know in Indiana where I was for several years, the Bureau of Motor Vehicles there has, I think they have the ability to put up to ten different brands in the branding fields. I mean, we're not talking adding anything that isn't already I think in the infrastructure.

MS. HARRINGTON: Ed.

MR. MIERZWINSKI: I just, along with the Federal Trade Commission have been in a seven-year battle with the credit bureaus over the referential integrity of their databases, over the mistakes in the credit bureau databases.

Congress just passed the law to improve credit reporting. And I would say that if we were to remove the title brands as the source of the database, that I think you're going to end up with a database that has got a lot of chaos theory in it.

I don't know chaos theory. But I think that's what you'd end up with is a mess just like the credit bureaus.
have. It sounds to me like title branding is a critical part of the database.

MS. HARRINGTON: Richard.

MR. RAINES: I was going to address the issue of the national database and title branding to reflect back I think on Gerry's comments.

You, I don't think you have to have title branding in order to have the national lemon database. I think it would help. It certainly would replace. We have a lot of experience with state title brands and it is quite confusing.

I don't want to walk through the technical details. But states themselves do have a hard time handling brands as a number of brands proliferate. They may have a code for certain brands. They drop them. If they drop them, and we receive these brands.

And a lot of times there is a lack of information about the brands. So it's a tough job handling brands. If your only objective was to have a national database of lemon information or manufacturer buyback information, you could do that independently of title brands.

You could do it yourself or do it through private parties like ourselves. But you could also probably get that done a lot sooner than mixing it into the title brand area because that is a complicated area.
MS. HARRINGTON: We're halfway through this segment. And because we just had lunch a little while ago I'd like to take one minute for everyone to stand up and stretch and just move about, and then we'll sit right back down and resume. And I have, the next ones who has to be called on are on the list.  

(Whereupon, a short break was taken.)

MS. HARRINGTON: Let get back to our discussion. Let's see. Richard. Richard. Where did Richard go?  

MS. SCHWARTZ: Richard had to leave, so I'm taking his place. My name is Margaret Schwartz.  

MS. HARRINGTON: Okay. Hi, Margaret.  

MS. SCHWARTZ: Hi.  

MS. HARRINGTON: All right, Jack. I have you next.  

MR. GILLIS: I also agree with Lou in terms of point of disclosure is the key. And, Berta, I'm interested to hear you say that you are under tremendous pressure from the car makers to keep all this paperwork with the car. And I assume you comply with their requests.  

MS. PHELPS: Correct.  

MR. GILLIS: Two questions. One, what kind of pressure, I mean, what do they do to you if you don't do this? And can you do the same thing to the next person down the channel?  

MS. PHELPS: Obviously, they --
MS. HARRINGTON: Now it's getting good; "what do they do to you?"

(Laughter.)

MS. PHELPS: They can pull the contract from us. Obviously we have to, we sell their cars. We're they're agents so we have to represent the merchandise that they sell exactly as they tell us to do. If we fail to do that, we fail our obligation, our contractual obligation.

MS. HARRINGTON: And what do they do? Do they sue you?

MS. PHELPS: They could. Yes. They could stop --

MS. HARRINGTON: Do these things happen?

MS. PHELPS: Well, we're very diligent in passing on the right paperwork. So I hope it will not happen.

MS. HARRINGTON: So the auto makers have sort of an interim effect on the auction people. What do you do, Lou?

MR. GOLDFARB: That's all to the good. I mean, we actually have one of our employees at the auction who walks these vehicles through.

The employee is standing there with the forms, okay, and puts that form on the vehicle, makes sure the dealer sees the form, signs off on the form, has multiple copies of the form, mainly to give off to the people that he sells these vehicles to.

It's a very effective way to get that communication.
as best that we can do to the point of sale. And most
dealers, I mean, you know, don't get the wrong idea. Most
dealers are complying.

I mean, dealers want to do the right thing by and
large, and there are always exceptions. But most of the
time dealers will make these disclosures to consumers and
people get the information.

Again, you know, our concern is overkill. I mean,
you know, we're talking about title branding. But again,
refer back to George's comments about the percentage of
vehicles that GM title, I mean, that are actually defined as
lemon, lemons under state lemon law is three percent.

So the rest of the vehicles are not even involved in
this whole branding idea. No one knows what the impact of
including all manufacturer buybacks in some national
so-called branding scheme.

That raises a whole different magnitude of problems.
And we want to take a very close look at that. But, I mean,
if what you're talking about is simply the branding of those
that qualified as lemons, it's a very minuscule part of the
issue.

MS. HARRINGTON: Jack, did you have anything else?

MR. GILLIS: No.

MS. HARRINGTON: Okay. Lou, did you have anything
else?
MR. GOLDFARB: No. That was it.

MS. SMITH: Well, I just wanted to kind of give the state enforcement views since I'm the only state person here.

MS. HARRINGTON: Let me also just add that the National Association of Attorneys General filed a very thoughtful comment and had planned on having a representative here today, but the press of other business kept all of them from being able to be here unfortunately.

So, Janet, we're very glad that you're here.

MS. SMITH: Thank you. I just primarily wanted to disagree with Lou that title branding is totally useless. I think, yes, I would agree that the most important aspect of this whole thing is to get the disclosure to the purchaser of the resold vehicle at the point of sale.

But title branding is useful as an enforcement tool to make sure that the person did get that disclosure. It's a means of finding out, lets the enforcing agency finding out later who that person was and checking to make sure that they got the disclosure. So it does have that value. And it is something --

MS. HARRINGTON: And how often is that done?

MS. SMITH: Well, I can't speak for Florida because we just initiated title branding two days ago.
(Laughter.)

MS. HARRINGTON: Does anyone know?

MS. SMITH: It is something that we will do.

MS. HARRINGTON: Does anyone, with great regularity does anyone have any experience with this, that is, with state enforcement authorities following up to see whether disclosure was given?

Peter.

MR. MAIER: In Washington State it is done and is quite effective.

MS. HARRINGTON: Is it done a lot or randomly or?

MR. MAIER: The enforcement?

MS. HARRINGTON: Yeah.

MR. MAIER: It's done a lot. In fact, Washington State is probably in the leadership in this area. But every vehicle that is repurchased, bought through the program, the state attorney general's office which actually runs the program then follows up to make sure that it in fact has been branded.

MS. HARRINGTON: Like 248 vehicles or something last year, as I recall from the comments?

MR. MAIER: It's on the order of several hundreds of vehicles so it's possible. Also, there is a state funded organization that the attorney general's office does it.

MS. SMITH: Sometimes how much the state can do is
driven by the case load that it has to deal with. But one
of the things we're trying to get started in Florida,
because our system has been so full of holes with a form
that's supposed to move with the vehicle, that just does not
work.

It's, with the exception of title branding, working
with our motor vehicle department so that we can track where
these vehicles are going.

MS. HARRINGTON: Okay. Did you have an answer to
that question, Rosemary, about the enforcement, how often is
this?

MS. SHAHAN: Yes. Obviously we're not a state
agency, but we've taken a very careful look at what
California's DMV has done to enforce this.

And there does seem to be a trend for more states to
be paying attention to lemon buyback resales in general.
The title branding is only one component of that. And I
would like to note that the state DMVs have been in
disagreement with the car companies over which vehicles
would qualify as lemons.

As you know from our comments, they've come up with
a lot of internal documentation from the car companies on
vehicles that they would characterize as customer
satisfaction buybacks where they had requested, in
California they had requested the tax refund for those as
lemons and they weren't branded in the states we believe they should have been.

MS. HARRINGTON: We're aware of that controversy.

George?

MR. VELEZ: Yeah. I guess I hate to keep harping on the same things, but I guess we're just disagreeing at a very fundamental level here. We're not saying that -- We're willing to do anything at this point that people think is -- but we question how effective any of it is.

Because we've got -- And everyone has anecdotal evidence. And I'm sure that for every example I throw out somebody is going to come up with a dozen other examples.

But we know that consumers, handing a consumer another piece of paper to sign at closing is in most instances futile because they've got so much paperwork that one more just doesn't make an impression on them.

If it does, they'll swear two months later that it didn't do it. It's just, it's human nature. You forget those sorts of things; you're excited about the car.

But fine. If that's the thing to do, let's do that.

But let's do it uniformly so we don't have 50 different ways or 52 different ways of doing it. If we're going to have title branding, let's do it.

Great. If the State of Indiana can figure out how to do it, that's great. Why don't you teach Connecticut and
New Jersey and California and some other states, where in Georgia we could not get a car branded because we don't have a business office in the state.

I mean, these things are just silly. And, you know, we're not against any of that. We will do whatever anyone wants us to do they think it's a consumer benefit to do that doesn't cost a whole lot, and in fact that costs which is going to have to be passed on to the consumer and that really is benefiting the consumer.

MS. HARRINGTON: Gerry.

MR. DUCHARME: Thank you. We have a process that pretty much tracks a vehicle down to retail sale. We have a form that we have go through the auction with a vehicle that is required to be signed by the dealer when he purchases the vehicle at auction.

And on the form it says that the dealer contractually commits to make the disclosure to the retail customer. He signs that. We get a copy of it. The form goes along into the dealer, and the dealer then at point of sale is required to disclose the form to the consumer and to obtain the consumer's signature on the form.

And then the dealer is required to send us a copy of that signed form for our records. When the dealer does that and sends us the signed form, we send him a check for three hundred dollars to pay him for, frankly, doing what he ought
to be doing.

If we don't get the form over a certain period of time, we have a process where we write the dealer, ask where the form is and get a status of it. Maybe the vehicle is still in inventory or the like.

If we discover that in fact the vehicle has been sold and the disclosure form has not been signed, then we implement what we call our recontact program. We write the consumer and we say we understand you bought a vehicle. We want to tell you about it.

And so we disclose at that point and time. This has resulted in our dealers becoming a little more adept at making disclosures at the appropriate time.

MS. HARRINGTON: Gerry, I read this in your comment and I had a question about it.

MR. DUCHARME: Sure.

MS. HARRINGTON: What is it that they disclose when they recontact? What's the content of that disclosure?

MR. DUCHARME: I think we have form letters here, don't we?

UNIDENTIFIED PERSON: The disclosure form and the cover letter.

MR. DUCHARME: Yeah. It's the disclosure form that he should have seen with the cover letter. So we give him what he should have gotten at point of sale.
But my point is not to describe our process. My point here is that manufacturers ought not to have to be doing this kind of thing. It is ridiculous that a company in order to make sure consumers are being told what they ought to have find out has to go to the lengths that we're going through.

And that's one of the reasons why Ford Motor Company is here today is to see whether we can get some sensible preemptive Federal legislation to get the law enforcement people in this country to be doing what some of us felt that we've had to do ourselves to make sure that the right thing is happening.

In my mind we don't want to have some sort of a system that overlays what we're doing. That's ridiculous because we're spending a fortune on that right now. We need a system that is self-operative and that is going to work.

And in my mind if we had a 1-800 number central database for this information and we use a mechanism that's out there right now, the Used Car Buyer Guide that will travel with the vehicle every time it's sold, the guide goes every time it's sold by a used car dealer, the guide goes on the window, the used car dealers have to call the 1-800 number and get the pedigree of the vehicle and put the information on, then we can ensure in a simple, straightforward way that this information is carried on it.
as long as that vehicle is on the road.

    MS. HARRINGTON: Steve.

    MR. TATERKA: Let me just respond, Eileen, to your inquiry a little earlier about what states have used title branding. And I can do that in a somewhat different context.

    When I was with the Tennessee Attorney General's Office, we used another state's flood salvage brand to identify cars that had been resold to Tennessee consumers and then sent contact letters or actually questionnaires to those consumers asking whether they knew the car had been flood salvaged in the other state.

    So that information can be pretty useful depending on how it's managed. I also just want to respond to something that Lou said a little earlier, because I'm not sure that we were sort of all on the same plane on this.

    The question I think had to do with, or the comment had to do with the percentage of vehicles that are buybacks. And I thought the implication in that --

    MR. GOLDFARB: A lemon buyback.

    MR. TATERKA: A lemon buyback. But I thought the implication that was that only that three percent figure is the ones that would be branded. And let me say that at least Indiana, their statute is much more comprehensive and would apply to any vehicle that's repurchased, whether it
was denominated as such or was through settlement or arbitration or whatever.

But I think that the answer to the question as to which vehicles should be branded is going to be determined by the outcome to this morning's discussion about what vehicles are ultimately determined to fall within the definition of buybacks.

My only point is that I just didn't want to, I didn't want us to proceed on the assumption that 97 percent of the vehicles would not necessarily be branded. Because I think most of the consumer representatives here would feel that, anything that went back to the manufacturer or trade assists and then certain certificate cars that we could talk about also should also be branded.

MS. HARRINGTON: Lou.

MR. GOLDFARB: Except for maybe Indiana, no state in the country now requires that. That's a major step beyond what exists today in terms of the rather severe remedy, and, you know, a questionable value remedy of branding a title.

I mean, branding a title is done when it's, you know, comes within its state's definition of lemon. And to brand all manufacturer buybacks in that way is just a quantum leap beyond what is being done today.

I'm not sure that it's justified by the cost and significance of it. But, you know, I understand what you're
saying. I just think that that's a very different approach.

MS. HARRINGTON: R. B. and then Phil, please.

MR. GRISHAM: I just want to step back up and ask for sort of a clarification. If, at this point if we have theoretically determined what the lemon is, then the brand is necessary if, unless the accountability for continuing the information flow ends at the first or second level of sale, which I don't think it should.

But what I think I'm hearing is that once it goes past the point of the franchise dealer to that first sale from that point, once it's been branded after we've determined what that brand is, then that information is not necessarily through the livelihood of the vehicle to be necessarily there with documents behind the titles and all sorts of phone numbers or databases that may or may not have the information at that point and time.

But if it's branded on that title all through the subsequent chain, then that information is always present at the point of sale. If it's not branded and the accountability ends at the point where the brand comes off, then that's fine with us.

But that accountability won't end there, and we know it. We're realistic about it. It will not end at that point.

So the question on brand or not to brand, if the car
does meet that criteria that it is the cars we're talking
about, the lemon, the three percent, it's got to be branded.

MS. HARRINGTON: Phil and then Jack.

MR. NOWICKI: I would just add that the norm is the
15 states plus the District of Columbia that have title
branding because it does apply to the standard which is most
of these states: California, Connecticut, even Florida now,
New York, Utah. It's various settlements and so forth. So
I don't think the three percent if it's represented as a,
you know, a decision of some sort is accurate.

MR. GILLIS: I think that, at the risk of offending
the Chairperson, I'm really concerned about the fact that if
we go with Lou's idea or we brand, your idea, we just brand
all the lemons, I don't think that's where our concern is.

MR. GRISHAM: I asked for a clarification.

MR. GILLIS: Yeah. It's clear to us that there is
some, there is a lot of confusion and there's probably some
legitimate buybacks; it's not fair to devalue that car in
the marketplace by somehow tagging it as a buyback.

But I think from the consumer perspective, our
concern is these nonlemons that are being purchased back.
Because I can tell you on the surface it seems to me if I
were a manufacturer, I would buy them back like crazy just
before they go into some branding, forced branding
It's in my best interest to do that. I can get more money for the car when I sell it over there to Berta. I don't have to disclose it. I don't have to spend the three hundred bucks to do all this stuff.

So there is a huge, at least on the surface, incentive to pull these cars back just before they get tagged. And I think that's what we're concerned about. And that's why the numbers are so important.

MS. HARRINGTON: Now, Jack, does that incentive exist more in terms of the value of the car at wholesale than it does to the repurchaser?

That is, what I've heard from Lou, for example, is that the information that goes to the consumer who purchases that car is the same information whether or not the car qualifies as a lemon under state law and is repurchased because of a legal obligation under the law.

So are you suggesting that the financial incentives for the manufacturer exists in the wholesale market rather than in the retail market?

MR. GILLIS: Yes. That's exactly what I'm suggesting. But, Berta, you can answer that. I mean, you can get more for a car that's not branded than you can for one that is.

MS. PHELPS: That is true. But remember, the
manufacturer declares the vehicle -- and we do not buy vehicles, to correct you, when you said he's selling the car to us. We are just an auction house providing a service.

But when the manufacturer sells that vehicle, in their closed sale to the buying dealer, they do disclose whether it is a lemon or whether it is a goodwill buyback or whatever; and it affects the price, yes.

So the vehicle, actually whether the title is branded, the manufacturer discloses on the block that there is some cloud, if you want to call it that, on the vehicle.

MS. HARRINGTON: Why would I be offended?

MR. GILLIS: Well, because, if this is happening ten times, let's go home. If it's happening a hundred thousand times a day, let's deal with it. And we don't know.

MR. GOLDFARB: If what's happening?

MR. GILLIS: The fact that there are bad cars being sold in this gray area of just before they become branded.

MS. HARRINGTON: Well, let me phrase the question a little differently. Your question is how many cars are being bought back and resold every year.

MR. GILLIS: Right, right.

MS. HARRINGTON: And it would appear from the comments in the record that number is between twenty-three and fifty thousand. Is that -- That's the record that we've got.
MR. GRAHAM: Again, I think George would take issue with this. But based on the comments that Chrysler submitted and also General Motors submitted, we're talking about a minimum of over two thousand. It's a very substantial number. Now, that obviously is going to include --

MS. HARRINGTON: And how many cars were sold, new cars are sold every year in the United States, Phil?

MR. NOWICKI: Fifteen million, roughly.

MS. HARRINGTON: So --

MR. VELEZ: And how many are under warranty?

Because it doesn't cover just the first year.

MR. NOWICKI: Three times that much.

MR. VELEZ: Right. So we're talking 45 million.

MR. GILLIS: So, just let me make sure I understand. So you've got 45 million cars; three percent of them you're buying back for lemons?

MR. VELEZ: No. Three percent of what we buy back are lemons.

MR. GILLIS: Okay. But what you're not saying is how many you're buying back.

MR. VELEZ: That's right.

MR. GILLIS: Okay. Now, if you're buying back .0001 percent, then this is not an issue. If you're buying back 10 percent --
MS. HARRINGTON: Hold on a sec, Jack. Didn't GM's comments say that they were buying back one half of one percent of cars sold?

MR. VELEZ: No.

MS. HARRINGTON: Is that what it says?

MR. VELEZ: We were saying less than one half of one percent of cars under warranty.

MS. HARRINGTON: Okay. Less than one. It's less than one half of one percent of cars under warranty.

MR. VELEZ: Right.

MR. GILLIS: So, Robert, that's where you got the fifty thousand.

MR. GRAHAM: We get the forty-six thousand looking at, assuming a two-year warranty. And well, forty-six thousand for General Motors assuming a two-year warranty and assuming that we're looking at one half of one percent.

Now, if it's less than one half of one percent, if it's a quarter of a percent, then we're talking about, you know, twenty-three thousand for General Motors plus the fifty-one hundred that Chrysler talked about and an addition of two thousand from the programs.

But in any event, it's a substantial number. If we're going to look at Chrysler and General Motors as indicative to the market, then we're talking about well over fifty thousand.

For The Record, Inc., Waldorf, Maryland (301) 870-8025
MS. HARRINGTON: Lou.

MR. GOLDFARB: I thought Berta answered Jack's question but I don't think you fully understood it. I mean, the point is that let's assume fifty thousand. Let's assume it's sixty or seventy thousand.

Disclosures are being made. The incentive you talk about is not there. Because whether we have to disclose as a lemon law buyback or disclose it as a manufacturer buyback and give the reasons in both cases, the point is that when we buy it back we know we're going to take a loss on resale at the auction.

MS. HARRINGTON: I thought I heard Berta say, though, that the devaluation is more substantial if the car is branded a lemon than if it is bought back with the disclosure but not branded.

MS. PHELPS: It has a, the value of the car is diminished. When you announce, as I said, and I'm calling it a could on the vehicle, whether or not you have a branded title or you announce that the vehicle is a buyback by the manufacturer, it has a definite effect on the price. But --

MR. GOLDFARB: It does have a greater effect if the word lemon buyback is on there as opposed to manufacturer buyback. Sure it does because lemon connotes something worse than a normal buyback.

MS. PHELPS: Right. It is a safety issue.

For The Record, Inc., Waldorf, Maryland (301) 870-8025
MS. HARRINGTON: Well, then Jack's point, which is then there is an incentive to buy back before it reaches that point.

MR. GOLDFARB: But the distinction is really, the distinction is not that significant in terms of what a manufacturer gets in return. Because in both cases a dealer has to make a disclosure.

MS. HARRINGTON: Right.

MR. GOLDFARB: Okay. And it just depends on how much weight a consumer gives to the word lemon versus manufacturer buyback and here are the reasons.

MS. HARRINGTON: Well, the question really was what happens at wholesale, not retail. And how much weight does the dealer who's buying the car at the auction give to lemon versus buyback.

MR. GOLDFARB: Yeah. Well, it depends on what was disclosed as the problem. If the problem was disclosed as a leaky roof, let's say, and the manufacturer says it's been fixed, the dealer would, whether or not it's gone through a lemon mechanism and been declared a lemon, the dealer would put a different judgment on that than it will if the disclosure is defective transmission, which the manufacturer then tried to fix and couldn't find the problem.

The dealer looking at that might diminish the value of that much more than a leaky roof, even though the leaky
roof was the one that went through a lemon law mechanism.

Okay. So the dealer pays more credence to what is disclosed as the problem rather than the titles or the designation that's given to them, intuitively.

MS. HARRINGTON: I mean, do any of the dealer people have anything to say about that? Does that sound right?

MS. PHELPS: That sounds about right.

MR. KITZMILLER: I think certainly how much the dealer feels the car is going to devalue depends on exactly what Lou said, what the problem is. And the fact that it's a lemon in and of itself doesn't mean that it's going to be worth less than if it was, doesn't have a problem.

Again, I think if goes exactly to what he said, whether or not the problem has been addressed. The other point I want to make is we keep coming back to this issue of the, that there is a financial incentive that's been directed for the manufactures but by inference it's directed toward us, that there's somehow some financial incentive to grab these bad cars right before they have to be disclosed and them dump them on the next person.

I mean, that just doesn't make any sense from a business perspective. We've heard Ford Motor Company, General Motors, Chrylser all go through their procedures, how much money it costs them to buy these cars back.

And so to my mind it makes no sense at all to assume
they're going to jump at the chance to dump these bad cars
before they have to make a disclosure on somebody else who's
also going to have a problem.

I think some of the comments reflected, we didn't
put this in our comments but I think it's very true, the
automobile business at this point is the most competitive
industry in this country.

And it costs us seven times more from the dealers'
perspective to get a customer back than to get one the first
time. So, you know, again, I just don't think the financial
incentive everybody keeps talking about to force these bad,
quote, bad cars on people exists out there.

I think the manufacturers have made a business
decision over the last number of years, which the dealers
certainly applaud because they're dealing with our
customers, to buy these cars back and to do more customer
goodwill buybacks. And I just don't think this financial
incentive we keep talking about is out there.

MS. HARRINGTON: Question from Carole?

MS. DANIELSON: Yeah. I want to, we were talking a
little bit earlier about the effect that various types of
brands or disclosures might have. And I really want to go
back to a question that Joe brought up this morning.

Are there any studies or anything else that are out
there, any surveys showing either consumer perception of
various types of disclosures or even dealer perception on
disclosures and what effect that might have?

MR. GOLDFARB: I'm not aware of any studies.

MR. MULHOLLAND: I'm not.

MS. HARRINGTON: Jack.

MR. GILLIS: Well, disclosure is certainly not a be
all end all remedy, as we can tell by how many people smoke. But what I think is a more salient question is, I mean, what
do you think, Peter? Is this much to do about nothing? I mean, you're in there every single day. Your dealers are in
the front line.

MR. KITZMILLER: Do I think it's much ado? I would say it's much ado about nothing. If you're asking me do I take fifty calls a week from our dealers who have problems with lemon law buyback cars, the answer is absolutely not.

I'm not trying to minimize the problem. I don't know the figures or the numbers, and I don't think that this is an issue that we shouldn't be addressing. But I'm not going to sit here and tell you that it's something that I get fifty calls a week from our dealers who have a problem. And frankly, if they were having a problem, we'd be hearing it.

MR. HILE: How many do you get?

MR. GILLIS: Well, I don't think they're having a problem. It appears that they're just pushing these cars
back out on the market without disclosure so therefore this
is no problem

MR. KITZMILLER: Well, no. First of all, that's not
correct. And second of all, when I say have a problem, we
get calls from dealers all the time who have problems with
customers, consumer problems where they didn't make a
correct disclosure or they did something incorrectly.

There are certain issues where a theme comes up and
we see a consistent problem with different types of dealers.
We had a problem way back before I started when they dealt
with the used car rule, maybe not doing that correctly or
doing some of those things correctly.

So I'm not saying it's much ado about nothing. But
I mean, I know you want to keep harping on the fact someone
is going to give you a magic figure as to how many of these
cars are out there; I don't know. We don't build the cars.
I take exception with the fact that we don't have a
problem because we're turning around and handing these cars
back out to people. Again, the majority of our dealers pass
on the disclosures that they receive from the manufacturer
to the customers.

We can talk about whether those disclosures are
effective or not or whether or not we need to change the
language. But again, I would take exception to the fact
that we don't do the disclosures because I don't think
that's the case.

And, you know, again, I don't know the scope of the problem. But based on, you know, the issues that I deal with, I don't get a lot of questions from dealers or concerns or problems, either if the manufacturer has a problem what they've done or consumers have had a problem with what they've done.

MS. HARRINGTON: Jack, I was interested in your comment about smoking. And I wonder if you were here to advance the theory that cars are a medical vice.

(Laughter.)

MS. HARRINGTON: This could be the answer. The FDA should regulate this.

(Laughter.)

MS. HARRINGTON: How many of you think that's a good idea?

MR. GILLIS: I think that we have some preemptive problems there, serious preemptive problems.

MS. HARRINGTON: Okay. Let's go to Rosemary.

MS. SHAHAN: I don't have the answer regarding how much vehicles are devalued, but I'd like to suggest some places to look. And one would be to maybe ask lenders or insurers.

Because I know we heard from consumers who were informed that they had a buyback vehicle. Then they found
out it had a history of safety defects. And their lender
wanted to call the entire note due because they said it was
not collateral for their loan.

      MS. HARRINGTON: How many times are you aware of
that having happened?

      MS. SHAHAN: Not real often. It was when they, when
they had like bad brakes, bad steering.

      MS. HARRINGTON: Single digit, double digit?
      MS. SHAHAN: Right. And it was partly because --
      (Laughter.)

      MS. HARRINGTON: Which of those two?
      (Laughter.)

      MS. HARRINGTON: Okay.

      MS. SHAHAN: And it's because it had to be a
combination of things. One, they had to become aware. And
consumers aren't always aware.

      The other was they had to find out the history of
the vehicle included the safety defect. And the third was
that their lender insurer found out. In a lot of cases they
don't even, they don't know.

      Because the title is not branded, the lenders or
insurers don't have a way to know that the vehicle has
problems. But these were cases where it got publicity in
their lender insurer that they had got in touch with them

For The Record, Inc., Waldorf, Maryland   (301) 870 -8025
and said.

MS. HARRINGTON: It would be pretty costly for the FTC to ask all the lenders and insurers about this on the basis of --

MS. SHAHAN: A few.

MS. HARRINGTON: --a single digit number. I mean, I think, you know, you have to think about what the cost to the consumers who are getting those loans would be as the lenders absorb the cost of responding to subpoenas from the Federal Trade Commission.

MS. SHAHAN: I understand. I'm just thinking if we were to be branding more titles, lenders and insurers might take more notice of that. You know, they aren't around the table, but obviously they have a concern.

MR. DUCHARME: We have not done it, this is in answer to Carole's question earlier. We have not done a real survey on all of this. But we have had some experience in connection with our recontact program that I described a little while ago.

And funny enough, the great majority, the overwhelming majority of people that we contacted were delighted with the fact that they get a twelve-twelve warranty that they weren't aware of.

They evidence delight with the car. And we've had
very, very few, I can just count them on one hand, you know, single digits here, where we've had, you know, sticky situations where they wanted to take some action because think felt that there was some wrongdoing.

And these are people who did not receive disclosure at the dealership at the point of sale. So when you're looking at magnitude of the problem out there, I guess we've come to learn that you may get several people in several states who make a lot of noise, maybe go to the media and get a lot in the press.

But in the real world the common person buying a car, once they find out what's happened sort of look at it as kind of a no -brainer. I don't want to deflate this whole thing, but that's our experience.

MS. HARRINGTON: Evan.

MR. JOHNSON: Well, one is I think Ford's experience might be certainly different than other industry members. But I think Ford's done a pretty good job and they've certainly done a good job of telling us they do a good job.

(Laughter.)

MR. DUCHARME: Thank you very much.

(Laughter.)

MR. JOHNSON: But there are other problems here. No one is going to be able to totally quantify this. The record is replete with the problem of cars going between
states and disclosures not being made.

When we took a quick look at GM's disclosure earlier, and I guess Pennsylvania at one time said it was fine. But I think the quick reaction of people here is that it was not.

While I'm not intimately familiar with Chrysler's disclosures, I would be willing to bet that a fair number of us could find some problems with them. The need for studies is probably true. We probably need focus groups, et cetera. But I think with too much work we can show that disclosures as a status quo are not adequate even when they're given.

The -- I'm curious. You know, we've gone on and on about the title branding. I think we beat it to death. And I'll throw out something that I sort of did in my comments. Some people have told me it was stupid to do it then, it's probably stupid now.

But the title branding does seem to be somewhat more severe. And certainly there is more opposition to it, and my perception is than other disclosure forms.

So do you do something different if you have a, if we have a fairly broad universe of vehicles that we do a written disclosure on, as we were discussing this morning but couldn't quite reach agreement on?

But for branding do you take a smaller universe,
like maybe a quite small universe of those that are actually
lemons for branding because of it being more severe? Does
it make any sense to not have the same threshold for all
different mechanisms that are used? I don't know. But I
think that has to be thought about.

MS. HARRINGTON: Okay. Janet. I would just remind
you all that we have about six minutes left here.

MS. SMITH: I thank Evan for helping me get found
again because I got lost there for a few minutes. That's
what I was going to say.

And I thought I heard people saying this morning
that we disclose all our buybacks; it doesn't matter what we
buy them back for. And then I was convinced. But we don't,
but title branding is horrible, horrible and useless and
terrible.

So I guess I was trying to figure out what are we
talking about, what the problem is. And thank you, Evan,
for helping me get found again. It sounds like one form of
disclosure is okay and another is not. I guess I'm
interested in knowing why.

MS. HARRINGTON: Well, I would offer one answer, and
that is it's probably different to say lemon than it is to
say bought this car back because the original purchaser
complained of a leaky roof and the manufacturer says we
fixed it.
MS. SMITH: That sounds like lemon to me.

MS. HARRINGTON: Well, but, I mean, a brand has a more succinct and disparaging, potentially, connotation I would think. I would think. That'd be my guess. I don't know.

Lou, you're next on the list. What do you think?

MR. GOLDFARB: Well, actually I put this up here when you were accepting single digit studies.

MS. HARRINGTON: Oh.

(Laughter.)

MR. GOLDFARB: Speaking to Carole's point about the effectiveness of disclosures, we do have some experience with, not large numbers but the number of consumers who we brought up to testify at a proceeding.

And a significant number actually got into double digits that our disclosure was very meaningful to them along with the one-year warranty and that they do not feel that having a brand lemon, or actually warranty read on their warranty return, gave them significantly more information and would have affected their decision at point of sale either in terms of the amount they bargained for or whether to buy the vehicle, so. But, Carole, there is too little out there to really make a definitive determination.

MS. HARRINGTON: I would think that there might be some interesting developing work on your part. I mean, if

For The Record, Inc., Waldorf, Maryland   (301) 870 -8025
it costs seven times more to get a new customer than keep
one, you know, satisfied, it seems like this would be pretty
useful information.

MR. GOLDFARB: That was Peter's number.
MR. KITZMILLER: That was mine.
MR. GOLDFARB: I'm not sure that's our experience.
MS. HARRINGTON: Peter, you're next on the list.

One of the Peters.

MR. KITZMILLER: No, I'm down.
MS. HARRINGTON: Peters are all down.

George.

MR. VELEZ: Yeah. I guess I'm not going to let our
disclosure form be attacked that way without a response. I
think the key to that disclosure form is the fact that it
has space to write in what was wrong with it, the problem.
And I don't know that we've had any consumers who
have actually seen the form complain that it's confusing,
first of all.

Second of all, we're not arguing about whether title
branding is good, Janet, or whether we ought to disclose at
point of sale. From General Motor's perspective, we'll do
whatever anyone wants that is effective as long as it's
uniform.

What we do have a problem with is, when I was in,
for example, when I was in high school the State of Texas

For The Record, Inc., Waldorf, Maryland (301) 870-8025
decided that pie was going to be equal to seven over three or whatever, two point one three, whatever fraction or approximation there is. It doesn't make it so.

And a state can brand something. And that's fine; we don't care about that. But it doesn't necessarily mean that that's a bad car just because it was branded. It tells something about the history of that vehicle.

And we don't have a problem disclosing the history of the vehicle. We do disclose in every single instance. And Lou's gripe with that, as is mine, is that that doesn't mean that's a lemon and it doesn't mean it's a bad car and ought to be thrown away.

MS. HARRINGTON: I'm reading a note from one of my colleagues. I should have worn my progressive bifocals today. I have no idea what that is.

(Laughter.)

MS. HARRINGTON: Adam, what do you want to know? What's the question?

MR. COHN: Well, I'd like to hear what people think about something that. We talked about a database earlier in a lot of detail. And we've been talking about branding and disclosures on the vehicle later today.

I just wanted to hear what people thought about something along the lines of taking a very broad definition we discussed earlier today of a buyback and incorporating
that into the notification that would be either on the title
brand or on the vehicle itself or in the disclosure at the
point of sale and then rely on the database for more
detailed information.

In other words, the consumer might get that point of
sale notice that they need to be on alert that there might
be something wrong with the car, and then they can access
the database by an 800 number or whatever.

MS. HARRINGTON: Well, we have one minute. And my
hunch is that the answer to that question is it depends on
what the content of the disclosure is.

But, Lou, do you want to give that --

MR. GOLDFARB: Well, you have to keep in mind what a
transaction is like. People who buy used cars, from our
experience, don't consult their computer initially. I mean,
they go out to used car lots and see a car.

And whatever information that they rely on
negotiating that car, it has to be there, okay. They're not
going to be giving those go look somewhere else and come
back a week later and see whether you want to buy this car
and what you want to pay for it.

So nothing is really meaningful unless it's there.
And that's why we give a disclosure and have been at point
of sale.

And the only real shortcoming that I think has been
demonstrated to some extent is that in some cases that
disclosure doesn't make it all the way through. We need to
look at ways to make it go all the way through.

MS. HARRINGTON: Well, another, probably another
perspective on that is that a different shortcoming is that
the content of the disclosure isn't significant, that it's
too, that it glosses over.

MR. GOLDFARB: It's inadequate.

MS. HARRINGTON: It's inadequate, it's, you know. I
mean, some of the, and I'm not endorsing it.

MR. GOLDFARB: I would agree with that.

MS. HARRINGTON: Right. No. I'm just sort of, some
of the comments that we've heard suggest that some think
that saying something about the manufacturer having made
repair is misleading. Others think that, you know, the
characterization of the buyback is misleading. So, I mean,
I think that gets us to content.

MR. GOLDFARB: Well, I'd really like to know from
Janet what should be in place of, you know, the
manufacturer's statement of what it has done. I mean,
either it's been repaired or it's not or there is some
dispute as to whether it's been repaired.

But the most important thing a consumer could want
is what's happened to this? I mean, what is this --

MS. HARRINGTON: Janet's comment earlier was that
that shouldn't included at all one way or the other.

            MR. GOLDFARB:  What do you say?

            MS. SMITH:  I don't know.

            MR. GOLDFARB:  Nothing?

            MS. HARRINGTON:  Janet says nothing.

            (Laughter.)

            MS. HARRINGTON:  Jack, you're going to have the last word. Then we're done with discussion.

            MR. GILLIS:  Okay. I think from CFA's perspective, I'm just speaking for CFA, we think that's a good idea, a big, bold warning, this is a buyback.

            There is a whole bunch of issues associated with that; how do you find out why it was bought back, was the problem fixed, so forth.

            But right now we sense, regardless of all these papers that we've seen here, consumers aren't being told. So it's got to be a big, bold warning, do something else, but this is a buyback.

            MS. HARRINGTON:  Warning?

            MR. MIERZWINSKI:  On a lemon yellow background.

            MR. GILLIS:  Yeah.

            MS. HARRINGTON:  All right. We are at a breaking point here only in terms of our schedule but not our spirit. And we will resume promptly at three p.m. to discuss the issue of uniformity.

For The Record, Inc., Waldorf, Maryland   (301) 870 -8025
(Whereupon, a short recess was taken.)

MS. HARRINGTON: Toward uniformity. This is where we talk about how the United Nations is going to take over the world.

(Laughter.)

MS. HARRINGTON: This is where we talk about whether or not we need a uniform national standard or approach to the information that's provided to consumers about vehicles that have been the subject of repurchaser buyback.

Ruth, are you back there? Ruth, we need a little bit of help. One of our pitchers tipped over here. If you can just grab something. Thanks.

We've heard a lot of comments, particularly I think from the selling, the seller's side: the manufacturers, the dealers, the auctions about their view that we need some uniformity in the information that must be provided and in the requirements for information that must be provided.

To begin the discussion on this issue, let me go to the first question that's on our agenda. And that is, what if any specific requirements must be uniform? And I think here we really are going to be looking for something, looking to see whether we can develop some consensus.

So I'm interested, we're interested here in a sense of what it is that people agree with or what they don't agree with. And we are not interested in people just
repeating one another.

So would someone like to begin the discussion?

Assuming that there should be some uniformity, what is it that should be uniformly required by way of disclosure?

John?

Now, Robert, I wanted to point out that your little sticky was up at the end of the last session and you didn't get called on, and that was two times today that that happened; twice.

MR. GRAHAM: Twice running.

MS. HARRINGTON: Do you want to say anything about this?

MR. GRAHAM: Well, I had something to say on a separate topic before, which I've forgotten.

MS. HARRINGTON: Well, we won't allow you to speak on another topic.

MR. GRAHAM: But I will share my very broad views on uniformity.

MS. HARRINGTON: Okay.

MR. GRAHAM: I think uniformity does serve a purpose. To the extent that it serves to effectuate better disclosure to the consumer, it's a good thing. As soon as it stops serving that interest, it's a bad thing.

And so our general view, before we get into, deeper into the details, is that a fully preemptive Federal
standard is a bad thing. It's a, you've got, the states have to have the freedom to provide an extra measure of protection to the citizens.

It's a reserve power that they've had for two hundred and some odd years to safeguard the health, safety, and morals of their citizenry. And I think that if you're going to have a, if you're going to have a fully preemptive law, you've got to have a very, very, very good reason.

MS. HARRINGTON: John.

MR. WHATLEY: Well, I'm all in favor of a fully preemptive Federal law so I'm going to start out with initial disagreement. And the reason is relatively practical.

And you said what disclosures must be. I think it falls into two categories. The first is a standard itself on which you've got, you trigger the disclosure. That needs to be uniform so that it can be applied by the customer relations departments of the manufacturers throughout the country and do it uniformly so that there is sort of a less chance of making mistakes. It is a very practical problem.

If you have one standard to apply, you can apply it, you can get better at applying it and you'll do it right. Under current systems, a lot of the problems I think that arise here are because the dealers and the customer relations departments have to apply a number of different
standards, and it's tough keeping them straight and making
the right standards, making the right disclosures in the
right state.

    So the standard itself for disclosure I think needs
to be uniform, and I think it needs to be the same
everywhere. There doesn't need to be a more protective one.
If you need to make more, give more protection, give it at a
Federal level. Make it uniform, make it preemptive.

    And the other thing that needs to be uniform I think
is sort of the path you follow after that. If it's going to
be title branding, make it the same. I don't know how, I
don't endorse title branding, but it needs to be the same
procedures from state to state.

    If it's going to be contract disclosure, which I
said in the last session I thought was the way to go, that
needs to be uniform to state to state. Otherwise problems
fall into the process and you make mistakes and you're going
to --

    And that I think right now something we could do, if
there is a problem with title disclosure in this country, it
follows from the fact that there is too much vulcanization.
There are too many pratfalls for those people who have to
make the decision on what to do.

    MS. HARRINGTON: One question that I would like to
throw out here, and we'd appreciate it if the next two or
three that I call on would comment on it, and anyone else, is whether there is any possibility for consensus around the following equation.

A trigger that is very inclusive of the sort that we discussed this morning, that is, what would trigger the disclosure requirement would be the buyback of the car but content that is less inclusive, shall we say.

That is, is there any -- Because I think that historically at least, the differences of view have been that the states favor a Federal law that leaves intact state requirements because the state, because the content of the state disclosures is more to the liking of the individual state.

The state believes that that, that the content gives better protection to its citizens. But on the other hand, other consumer advocates argue that the trigger isn't inclusive enough.

And so I'm just wondering if there is any, if there is any room for compromise along the lines of the equation that I suggest; a very inclusive trigger, a less inclusive, if you will, content, broader categories of information in the disclosure rather than, you know, whatever it is that the states require that is currently, at least, that is more detailed.

Lou.

For The Record, Inc., Waldorf, Maryland   (301) 870 -8025
MR. GOLDFARB: We put a tremendous value on uniformity. We would go very, very far along the road to inclusiveness if there could be uniformity. We'd even go down the road to more data being disclosed if we could have uniformity, but --

MS. HARRINGTON: What in your mind is the more burdensome statement of disclosure?

MR. GOLDFARB: Well, wait a second. But uniformity, uniformity coupled with fifty different requirements means uniformity doesn't exist. So that is really what the concern here is. I mean, all the virtues of uniformity are gone without uniformity.

MS. HARRINGTON: Right. Well, is there a state that you, you don't even have to name the state, but can you describe a disclosure requirement that is more inclusive? Is there a state that you think has, or is there a particular state requirement disclosure requirement that you think is particularly detailed and maybe overkill, as you call it?

MR. GOLDFARB: There are a number of state disclosure requirements which are in two parts. One, if it comes within their definition of a lemon, be branded a lemon, and then give the reasons that it was, the problems complained of and the things that were done to repair it.

If it's not branded a lemon, you say it was a
manufacturer buyback and give the reasons that were
complained of and what you did to repair it. That is what
we're doing, and that is the right way to go.

That is the most informative way to get the
information to consumers in a meaningful way. And there are
states that come close. They give autonomy as to what
specifically is said as far as the problem complained of and
the action taken by the manufacturer. That's up to the
manufacturer.

MS. HARRINGTON: I guess what I'm asking is whether
the manufacturers and others who complain that the lack of
uniformity among state disclosure requirements really is a
problem for you, that it creates burdens, whether you can
live, whether you could live with a Federal law that
required that disclosures be those that would be set forth
in what you think of is the most burdensome state disclosure
law.

MR. GOLDFARB: We could accept that. But the only
problem with the varied state laws is the branding
requirement, because we can't go among states and have the
same branding implemented in various states. So, I mean,
that is the problem with varying state requirements. But as
far as what's disclosed --

MS. HARRINGTON: Well, let's set aside the branding
issue for the moment and just think about what you think of

For The Record, Inc., Waldorf, Maryland   (301) 870 -8025
as the most burdensome state, set of state disclosures. If
that were, if the most burdensome were the national
standard, would that be acceptable?

MR. GOLDFARB: Yes.

MS. HARRINGTON: Now, states. We only have one
state, unfortunately. Do you think that the, Janet, do you
have any sense of whether the states think that, would see
their disclosure requirements as being somewhere on a
spectrum of more inclusive, more burdensome, or is it a
matter of, you know, different and better information that's
required by one state versus another?

I mean, is there, would there be any way that you
think that the states could come to some agreement on sort
of a most inclusive disclosure standard? Any idea?

MS. SMITH: That is a hard one. Because I don't
know, it's hard for me to speak to all the states because
all the requirements are so, are different.

I think, at least speaking for our state, it's not
so much that it's burdensome, because I'm not sure how
you're defining burdensome.

If you're saying burdensome meaning burdensome on
the manufacturers, our concern is more that the information
be complete and accessible to the consumer at the point of
sale and that we have a means of monitoring and enforcing
the compliance with that information. Whether or not that's
burdensome on somebody, that's not a big concern.

MS. HARRINGTON: Okay.

MS. SMITH: I can't speak for any other states.

MS. HARRINGTON: Phil, do you have a point of view on that?

MR. NOWICKI: Well, I'll give you my personal point of view and then I'll give you what I think I sense the states' reaction might be. Maybe I'll go in that order.

I think the states will be somewhat ambivalent to anything that's preemptive. I think they think that new problems may develop that, they may be at a local level, that they would like to think that they could handle in a more specific fashion.

I will give you my point of view as I have looked at this situation, as I have done research, as I have looked at all of the states and what they require. And right now we have something that even with great, strong standards we have something that doesn't work very well as far as accomplishing its objective.

And when I hear people willing to make some concessions on the broadness of a disclosure standard and so forth and perhaps seeing some kind of uniformity, even if it has a preemptive element, I think that has merit and I think it is maybe one of the ways to solve this problem.

I don't know about total preemption. But I would
think there would have to be some preemption there to achieve a common standard that I think would work for the states.

The states can look at it from an idealistic standpoint as they have it right now. But I don't see something that really works. And I think if you looked at something that was uniform, you would have something that would work. So from that perspective I like that.

MS. HARRINGTON: Let me just check the other manufacturers to see whether they would share Lou's view on the acceptability of sort of going to the most inclusive, whatever you want to call it, the most burdensome, most inclusive, you know, whatever you think of as like the most --

Peggy, what do you?

MS. BOWERS: I agree that we certainly would be willing to do that if we could get uniformity. The problem that we have is trying to comply with 50 different state statutes.

Phil has a chart that he can probably hold up. He's got all of these little dots on it and various different charts and formulas. And trying to get our people to understand that and follow it is certainly a challenge.

MS. HARRINGTON: Okay. George.

MR. VELEZ: Yeah. We wouldn't have a problem with
that. But I think you would have to include everyone who sells cars. But, yeah.

MR. WHATLEY: Can I ask a point of clarification?

MS. HARRINGTON: Um -hmm.

MR. WHATLEY: You initially premised this on the two pieces.

MS. HARRINGTON: Um -hmm.

MR. WHATLEY: Trigger and then the content.

MS. HARRINGTON: Um -hmm.

MR. WHATLEY: Are you saying both would be uniform or just the trigger would be uniform?

MS. HARRINGTON: Both the trigger and the content would be uniform.

MR. WHATLEY: Then I think the answer is yes. Because we would say --

MS. HARRINGTON: Talking about a more inclusive trigger --

MR. WHATLEY: A more inclusive trigger.

MS. HARRINGTON: --and a more, for lack of a better word, more burdensome disclosure or more --

MR. WHATLEY: As long as they're both uniform and we can figure out what to do under those standards, I think yes is the answer.

MS. HARRINGTON: Lori, do you have a point of view

For The Record, Inc., Waldorf, Maryland   (301) 870 -8025
on that?

MS. COHEN: There are so many things I've been wanting to respond to. You're asking the state point of view. We do represent state motor vehicle administrators. They could have a little different opinions than the state attorneys general on the enforcement side.

We strongly believe in uniformity. It's hard to get it; we've been trying for a long time. Sometimes Federal laws are helpful. It would be helpful in coming up with a common definition. And on the salvage side, that's what the HR2900 is about.

So many things here. What kind of disclosure for the state motor vehicle administrators? You would want to have the least burdensome and yet something that's meaningful.

You need standard definitions. That would be extremely helpful. And something that you can transmit electronically so you don't have to rely on the paper state to state.

So it's all a balancing act that we need to work together and come up with these definitions and the right mix of some things. Manufacturers agree we don't want lots of forms, lots of procedures, lots of requirements.

MS. HARRINGTON: Okay. Ed.

MR. MIERZWINSKI: Well, from the standpoint of
consumer groups, the "P" word really gets us very upset.
And the preemption of state laws just for the sake of
uniformity I think is, I think is going too far for where
this debate really is at.

And I would prefer that we start from the point of
minimal standards and then see if we need to discuss the
idea of uniformity.

If we're talking about minimal standards, that is,
to have a Federal standard that takes away the weaker state
standards, we're for that. But if we're talking about also
taking away the stronger states' standards --

MS. HARRINGTON: No, we're not. We're saying we
would take the strongest state standard.

MR. MIERZWINSKI: And take away the right of the
states to go farther.

MS. HARRINGTON: Yes. Yes.

MR. MIERZWINSKI: Well, we're against that. But the
first part of your system is good.

MS. HARRINGTON: So you're against preemption,
period.

MR. MIERZWINSKI: Well, if you took the strongest
state standard, I would strongly argue that very few states
would go further unless that strongest standard turned out
to not be adequate enough and that you would achieve your
goal without eviscerating the rights of the states to go
farther.

That is, no state that has a number of problems before it is going to have either attorneys general, consumer groups or other people agitating for a different law.

It's going to, they're going to give your law a chance to work because there are many other things to deal with. But if you take away their right to work on another law that is better, there may be other problems that come up.

And then we've got to come back to the Federal Government. And moving the Federal Government is kind of like moving a, well, it's hard to move the Federal Government.

(Laughter.)

MR. MIERZWINISKI: And it's better to be able to move a couple of states. And then once you've moved a couple of states, then you can move the Federal Government. I mean, that's why we don't like to give away that right.

But again, if you bring the bar -- and I, you know, this industry here, I don't doubt what everybody is saying here is sincere.

But when we work on the Hill, when we talk about bringing it up to the level of the strongest state, we usually end up with a level of the weakest state. In the
end those are the fights we end up with. And that's one of the other reasons we get kind of concerned when we get to the preemptive battle.

MS. HARRINGTON: Okay. Berta.

MS. PHELPS: Again, in our industry we handle roughly fifty million cars a year. And we see the problem with nonuniformity in the salvage end, the problems it causes for us, for the dealers, for the consumers.

What happens, they are in every walk of business and every walk of life, there are unscrupulous people, unscrupulous dealers.

They will take advantage of the states that have less stringent requirements for disclosure and move those vehicles in those states and sell them there. Unless you have a uniform law, make the Federal law preemptive so all the states will have to comply the same way, I really don't they you're accomplishing it.

MR. GILLIS: CFA views preemption much in the way Lou Goldfard views the American Trial Lawyers. Having said that, we are very open to a uniform set of standards that would be, in the contingency is that we would have to have an extraordinary good faith effort by the manufacturers to hammer out a set of standards that truly are meaningful and that can be subject to outside verification.
It's not just the car company putting data into this system. So with those two exemptions, I think we're very open to a uniform set of standards.

MS. HARRINGTON: But not a preemptive, not a Federal standard that is preemptive.

MR. GILLIS: CFA's position is --

MS. HARRINGTON: Lou is stalking out now that you've made reference to his views about the American Trial Lawyers.

MR. GILLIS: I know. Well --

(Laughter.)

MR. JOHNSON: He's probably going out to find one.

MR. GILLIS: He's probably going out to find one, right. I'm not saying no to preemption. I am saying there is a long, long history and concern, as Ed said, about the issue of preemption. But I'm not saying no.

MS. HARRINGTON: Peter.

MR. MIERZWINSKI: Yes. I know from Washington State's perspective there is a lot weariness about preemption and uniformity. And the Washington Attorney General's Office had made some comments and wasn't able to come.

But they feel, and I agree that the Washington State system is good, and they are concerned that if there's preemption that it will be a lesser standard.
And I think there are other states who would share that point of view. And it's not only the content of the disclosure, but it also has to do with the manner in which it occurs.

That is, things like prominence, where it is on the vehicle, at what point it occurs during the transaction, how visible it is, whether there is a signature, all those things are just as important if not more important than the actual wording of it.

So that's very important to address. Because the words on it, and many of us here are wordsmiths, but it's the process of how it actually occurs that really determines in many cases the actual effectiveness of the document.

MS. HARRINGTON: Okay. Phil.

MR. NOWICKI: Actually, I'm going to pass and come back if other people have comments.

MS. HARRINGTON: Okay. Steve.

MR. TATERKA: I guess I would express some of the same concerns that some of the other consumer representatives have expressed in terms of preemption. But maybe the approach that would work would be the one similar to the one that's done in the Federal Odometer Act which sets forth Federally mandated minimum requirements and allows the states to do whatever they want as long as they're not inconsistent with the Federal requirements.
So you could, you could have the uniformity. But yet if some states wanted to mandate something over and above what was already Federally mandated, that might work in terms of what disclosures have to be made. That might pose a problem in terms of what the trigger is. Because I still wouldn't want to preclude a state from having a trigger that might be more comprehensive.

And I think the whole difficulty in having this discussion is is that although you have posed the question in terms of the most comprehensive definition of buyback and the most all inclusive requirements in terms of disclosures, you know, the devil is in the details.

And as a consumer representative, I'd hate to sign off on something without looking at whatever those details might be.

MS. HARRINGTON: Well, we're very familiar with the history of the debate over preemption in consumer protection matters here at the FTC. So I don't want to have that whole discussion again.

What I'm looking for here is a sense of whether there's been any movement. Because I know where the states have been. I know where consumer groups have been. I know where industry has been.

Do we have any movement here on this I guess is one
of the questions that I'm asking. We will hear from Evan.

And, Peggy, you had your flag up but it's down now?

    MS. BOWERS: I just had one more point I wanted to add.

    MS. HARRINGTON: Well, you were up before them. But I didn't know whether you didn't want to speak.

    MS. BOWERS: I just, I just want to respond to Peter's point. He talked about not the content but the prominence.

    And one of the things about uniformity that I think is something we don't want to overlook is the resources that we have, if we can address them all to one standard for training purposes of our people, it makes it so much easier for us to be able to make sure that the content is correct, that the prominence is there and that all of these things are properly addressed as opposed to trying to use our resources for fifty different standards.

    So I think that, you know, if you can do one standard, you really can make it more effective in addition to having the threshold that you're looking for.

    MS. HARRINGTON: Evan and then Phil.

    MR. JOHNSON: The, I think there is more of an argument for uniformity in the topics that we're dealing with now on used car disclosures, and in many other aspects of lemon laws, et cetera.
When you start to get into possible titling areas or other disclosures, you'll have the pressings of the FTC Used Car Rule, the strong Federal presence in the area. Though it is not totally preemptive, you have become almost uniform with the exception of a couple states into something a little bit in addition. But it does preempt anything inconsistent. And that sort of approach here may make sense. The problem, one problem is of course that you have a lot more states with something apparently on the books than we did in the used car rule. And so that's a problematic area. But I think if you come up with a good, strong Federal approach, you're going to accomplish uniformity virtually totally whether or not you make it absolutely preemptive, in my view. You're going to accomplish what you want.

MS. HARRINGTON: Phil.

MR. NOWICKI: I was just going to say on the used car rule you have that; it's basically preemptive unless the state can show a stronger need. I think there's three states, though, that have the separate requirements for the disclosure. So I don't know if that lends any support to how you might want to approach this problem. But I gather that's been relatively successful and not overly burdensome, so.
MS. HARRINGTON: Peter.

MR. MAIER: Actually, that's a good example. Because the used car rule actually in Washington State is a big problem because it requires an as-is denomination, when under Washington State law that is hardly ever the case. It is a very good example where we should not have preemption.

MS. HARRINGTON: Peter, I'm not quite sure I'm following how this actually plays out in Washington State. Would you enlighten me?

MR. MAIER: You mean in used car?

MS. HARRINGTON: Yeah. Why is it a problem?

MR. MAIER: Well, because under Washington State law to disclaim an implied warranty takes specific negotiations and so forth which hardly ever occurs except in a theoretical sense.

MR. HILE: So you just leave the box unchecked. There's usually a sticker. There's a box on the used car sticker than says "as is." If you check it, it's as -is. If you leave it unchecked, then there's no warranty.

MR. MAIER: Yes. But the sticker is required and they always check it. And there should be more on there. And this is not on our point here. But the point is that under Washington's law it does not, it actually, I think it's counterproductive because it misleads people that in fact it is an as -is state when in fact it is not.
MS. HARRINGTON: Evan. Did you want to be recognized?

MR. JOHNSON: No, I have nothing more to comment.

Private conversation.

MS. HARRINGTON: Share with the class, Evan.

(Laughter.)

MS. HARRINGTON: Well, it seems to me that we started out on a bright note and things have sort of slid downhill here on this topic. That is, we began with some sense that there was an equation for a compromise. But my sense is that that's not really the case.

MR. GILLIS: I don't think so.

MS. HARRINGTON: Well, tell me why, Jack.

MR. GILLIS: I mean, again, preemption is a very slippery slope. But we are open. I don't know what the most burdensome state requirements are, but I'd like to take a look at them and see what that bottom line stick is and make a determination of whether that or something different could be effective, so.

MS. HARRINGTON: Would you be willing, would there be a small group of you who would be willing to get, representing some of the different interests who would be willing to get together and really take a look at this to see whether you could come to agreement on a uniform standard?
MR. GRAHAM: Uniform preemptive standard?

MS. HARRINGTON: Let's start, let's start with uniformity.

MR. GRAHAM: That's the whole thing.

MR. GILLIS: Let's start with the uniform. Let's start with uniform.

MS. HARRINGTON: Start with uniformity.

MR. GRAHAM: Okay. Sure.

MS. HARRINGTON: What would, you know, what would -- I mean, I think that we've heard that the manufacturers would be willing to, could live with a more inclusive trigger and a uniform, would go for a more inclusive trigger if the disclosure standard, the content standard was uniform.

MS. BOWERS: If there were uniformity.

MS. HARRINGTON: Theoretically, yeah, if there were uniformity. Is there a very small group of you that would be willing to try to come up with something that we would mail around to all of the participants, sort of a straw, just a straw poll, nothing binding. It would be on the record.

Is there an OMB problem with that? Does anyone know? Lee, you're here. You know about those things. No?

MR. GRAHAM: Don't you have to file a reduction of paperwork in?
MR. HILE: If it's more than twenty people.

MS. HARRINGTON: If it's more than twenty people.

Good. Well, we won't poll all of you.

(Laughter.)

MS. HARRINGTON: You know, I think that there -- You know, we would really be interested in knowing what the prospect for consensus might be on a uniform disclosure.

MR. GILLIS: Why don't we have like two or three manufacturers, database person, and a couple consumer people just -- I'm not sure we can come to a consensus.

MS. HARRINGTON: It would be interesting to see.

MR. GILLIS: Right.

MS. HARRINGTON: It would be interesting to see.

Now, the last one of these kinds of public workshops that I moderated was in a completely different subject area, but we sent a group of six people out of the room and told them to pretend that they were stranded on a desert island and they couldn't get off until they came to a consensus on how to make a particular disclosure. And they're, still they're starving.

(Laughter.)

MS. HARRINGTON: So I think you're right. It may not be possible. But I think that a good follow-up to this discussion today would be to see whether there really is any prospect for agreement on uniform, on the content and

For The Record, Inc., Waldorf, Maryland (301) 870 -8025
trigger of uniform disclosure.

Phil?

MR. NOWICKI: I don't know if we have to entirely
reinvent the wheel. Five years ago on a task force that I
was involved with in NAAG we put together a model law
dealing with resold lemons.

And Connecticut adopted most of it. Utah adopted
most of it. Indiana adopted most of it. And I guess if we
throw California into the formula, you could probably pick
those four and probably come up with something that may be
the standard that contains the elements at least that the
consumer groups are looking at.

MS. HARRINGTON: Were these for lemons within the
legal --

MR. NOWICKI: No, they covered everything. And then
it was the same issue, you know, that we had. Steve was on
the calls and then Jan and Garry. It's too bad Garry
Desjardins isn't here to speak of the Connecticut
experience.

So, I mean, you already have that without going out
on a search and find mission. I think people we've brought
in, in fact I think we had all 51, or 50 attorneys general.

MS. HARRINGTON: And who were the manufacturers on
the NAAG proposal?

MR. NOWICKI: Only at a meeting, at the final
meeting.

MS. HARRINGTON: But did they take a position?

MR. NOWICKI: Well, I think John was at the meeting in Fort Lauderdale when it was adopted. And Lou Goldfarb was there. I mean I --

MR. WHATLEY: We didn't take a position.

MR. NOWICKI: Again, it was from the issue that it was not preemptive. It was just states wanting to do that. I mean, I don't think it's in the context to consider how they felt about it knowing that this is just the highest standard and every state was going to go out and whether they were going to adopt it or not adopt it. I think if we had to work preemptive with that there might have been a different response, so.

MS. HARRINGTON: Do you know, Peggy, did Ford have a position on that?

MS. BOWERS: No, I'm sorry, I don't know.

MS. HARRINGTON: Jackie?

MS. GLASSMAN: Apparently Lou was there, but I was not so I don't know what it was.

MS. HARRINGTON: Okay. Are you suggesting that to be a starting point, Phil?

MR. NOWICKI: I think it would simplify things. And based on my research that I've done over the last few months, it seems to be the case that you're trying to find
the highest standard. And the elements there that I think would satisfy consumer people is probably in those four states.

MS. HARRINGTON: Does anyone have any other comment on uniformity, in this section because we may move to the public discussion portion of the program if no one has anything else to say.

MS. SHAHAN: I have a question.

MS. HARRINGTON: Um -hmm.

MS. SHAHAN: And that is, I'd appreciate, I need some clarification from the manufacturers and the dealers possibly and maybe other companies as well regarding whether they, what they really want is uniformity or whether preemption in and of itself is what they're after.

Now, if you could have a hundred percent uniformity through regulation that sets the standard that all the states love and don't supersede, are you accomplishing what you're after or are you after preemption for reasons other than uniformity?

MS. HARRINGTON: John.

MR. WHATLEY: In my view preemption guarantees uniformity.

MS. SHAHAN: That's like begging the customer, isn't it? You've saying you have to have preemption in order to get --
MR. WHATLEY: In a theoretical world, in a theoretical world if all 51 jurisdictions got together in agreement, we'll do this and no more, which I don't think they can do anyway, that would be fine. But they're not going to do that.

If they were going to -- they didn't even agree on the NAAG proposal on Federal regs. In fact, four or five states did. A lot more didn't adopt it. And we got no uniformity here.

MR. GILLIS: Is there a critical mass that you would be happy with, if 40 states agreed or something? I mean, that's better than 50 different.

MR. GRAHAM: But then you've got 11 different states.

MR. WHATLEY: Yeah, you've still got to keep -- I mean, the problem we have, as I said in the first comment I made, the more standards you have the more chances you have to make a mistake.

And that's what we're concerned about. If we have a clear, simple uniform standard you make fewer mistakes. Consumers benefit, we benefit. That's our view. If it's two standards as opposed to one, there is that much more chance for mistakes.

It's clearly more palatable. But my real preference is give us one stand, make it tough, and we'll live with it.
MS. HARRINGTON: Evan.

MR. JOHNSON: Well, you see, I think this is
different than past things that I've seen. And I'm more
optimistic than you, Eileen, because I don't recall the
industry saying --

MS. HARRINGTON: Wow.

MR. JOHNSON: --that we'll go to the, we'll go to
the strongest. I mean, I'm sure there's a limit there
somewhere to how far I'm willing to go for uniformity. But
I haven't, I haven't heard that before. And I, you know, I
think that's a major --

MR. GILLIS: See, they don't know about this new law
in Maryland that you're passing.

(Laughter.)

MR. JOHNSON: That's right. I think that's a major
concession. And it changed from some of what we heard
earlier, you know, throughout the day. I mean, it seems to
me they've said they're willing to reconsider everything for
uniformity. And that's where there is a chance to do
something.

MS. HARRINGTON: Berta.

MS. PHELPS: Unless you have preemption, I don't
think you can accomplish uniformity. And I see this in our
daily business life. And I'm giving you one example. I
guess I have to keep harping on salvage because this is an
issue we are very familiar with.

I will not name the state. They just passed a new salvage law, 85 percent is rebuildable, 95 percent is scrap. The legislature had enough power behind them from the, from one segment of the industry which now allows the 95 percent to be rebuildable.

Even so, the law says it is scrap. So the states within themselves, their own laws they cannot come up with uniformity. And we deal with all the motor vehicle administrators throughout the United States.

And if you hear one common theme among them is that they cannot accomplish uniformity among themselves. That is why they all supported the anti car-theft act. That's why they supported the uniformity with salvage, because among themselves they cannot come up with uniformity.

There are such strong lobbyists in certain states that will not allow uniformity. So truly just take a poll among the state administrators, motor vehicle administrators and see how they feel about achieving uniformity on their own. And you will find that they will tell you it is not possible. So.

MS. HARRINGTON: Evan, did you want to speak again?

MR. JOHNSON: No, I don't.

Well, I want to see whether we might in the wake of this discussion test whether we really have moved, whether we have had some movement by putting a little work group together to come up with an idea of what a uniform disclosure trigger and standard might look like.

And I want to be really clear here on the record that this would not be a proposal for a regulation from the Federal Trade Commission at all, but rather an opportunity to see whether there is any possibility for a consensus among the various interests and stakeholders that we have here on this issue.

And with that understanding, I was wondering whether Jack Gillis, and either Gerry or Peggy, and Lou or Jackie, and Lori, Janet, and Steve and Berta would be willing to form a work group and work on this.

And whether the rest of you would be willing, are comfortable with the composition of that group. Let's all talk about them.

(Laughter.)

MS. HARRINGTON: Does anyone have a serious problem?

MR. GILLIS: I'd like to propose that the chief petitioner, Rosemary, be part of that.

MS. SHAHAN: Can we meet in Sacramento?

MS. HARRINGTON: We're not, you can meet on the phone, you know.
MS. SHAHAN: Good.

MS. HARRINGTON: It's up to you guys to figure out how to meet. But it would be an interesting follow-up to see whether you can come up with something that you all can agree on.

Jack.

MR. GILLIS: Is John included?

MS. HARRINGTON: No, but he could be. I mean, the larger the group, the more difficult the task.

MR. WHATLEY: I think it would a liability if I'm not.

MR. GILLIS: I think we need an international.

MS. HARRINGTON: I think --

MS. SHAHAN: Could we, I'm not sure if you included Garry Desjardins. He's not here so he can't say no.

MS. HARRINGTON: Janet, Garry can talk to Janet. Does anybody have a problem with that? All right. Do you think, Jack, since you're the first name on my list, would you chair this?

MR. GILLIS: Yes.

MS. HARRINGTON: And could you, could this group, through whatever means of conversation you can arrange, get back to us in a month to tell us whether you have been able to come to a consensus?

MR. GILLIS: Okay. As you indicated, this is not a
opportunity for us to propose that the FTC --

MS. HARRINGTON: Yes.

MR. GILLIS: --present a law. I would also like to
say that if we don't come to a consensus, we preserve our
options here.

MS. HARRINGTON: Sure. Yeah. No. I think --

MR. GILLIS: We're going to give it a good faith to
come to a consensus.

MS. HARRINGTON: Yeah. I -- Understood.

Understood.

MR. GILLIS: Good. I'll be happy to do that.

MS. HARRINGTON: This is, this is, you know,
everyone just making a good faith effort to see whether
consensus can be achieved.

And so what we're looking for back from you, Jack,
is, yes, we achieved consensus and here's what it is; no, we
didn't. And then if you can give us anything additional, we
came really close, you know, but this group just couldn't
agree.

MR. GRAHAM: That might be a mistake in disclosure.

MS. HARRINGTON: Nah. But it would be, and so, you
know, let's say November 3rd we'll hear back from you. And
this group will conference over the phone.

MS. PHELPS: Can I make one comment?

MS. HARRINGTON: Yes.

For The Record, Inc., Waldorf, Maryland   (301) 870 -8025
MS. PHELPS: I do want to make clear that I have absolutely no experience with dealing with consumers.

MR. GILLIS: You're going to love it.

(Laughter.)

MS. PHELPS: I tried to get out.

MS. SHAHAN: Would it be possible to have a little more time?

MS. HARRINGTON: No. No.

MS. SHAHAN: It's going to be before the election.

MS. HARRINGTON: Well, it has nothing to do with the election. It has to do with a month from today. If you want it to be a month and four days from today so that you're after the election, that's fine.

But, you know, this is, if you can't agree on this in 30 days, you're not going to agree on it in 60 days or 90 days or 120 days I don't think. And, you know, you might disagree, but that's why it's our meeting.

(Laughter.)

MR. JOHNSON: How much specificity are you looking for from this?

MS. HARRINGTON: Jack will worry about that.

MR. GILLIS: Yeah.

MS. HARRINGTON: That's, you know.

MR. GILLIS: I mean, it's going to be very specific.

Because I don't want any fooling around later. I mean,
let's just make it specific. If we can't agree on something really tight and really strong, then we just can't do it and we'll move forward.

MS. HARRINGTON: All right. Now we're at the portion of the program where we're going to hear from members of the audience.

Tom, you have the index cards, please.

MR. ROWAN: Three of them were distributed and none of them have been returned.

MS. HARRINGTON: Okay. Well, there is someone who wants to return his index card, and it's the gentleman from Mazda.

Okay. We have Robert Mathieson from Mazda Motor of America, Inc., who would like to discuss the definition of buyback and the issue of standards for uniformity.

And if we could give him the microphone that's right near you, Evan, that one comes off.

And Jack Oprah Gillis is at the mike.

(Laughter.)

MR. MATHIESON: Oh, thank you. Am I supposed to stand up?

MS. HARRINGTON: You're supposed to talk in the other end. There you go.

MR. MATHIESON: Am I supposed to stand up?

MS. HARRINGTON: No.
MR. MATHIESON: Ah. Well, I think this has been most interesting from my point of view. I should say right away that I'm not an attorney, and that's one of the points of why I wanted to speak.

We've heard a lot of high level gentlemen and ladies at the meeting. And I think we have seen that there's been a lot of disagreement as well as some agreement.

The point that I would like to make is that all this uniformity and definition trickles down to blokes like me who actually have to write the process for the manufacturer. And that is very difficult. As you can gather, if we can't reach agreement at this high level, it's even more difficult at my level.

So what I would like to do is to make a plea for simplicity and definitely uniformity. And, because we're all agreed that we need to do something for the consumer, I haven't heard any disagreement on that.

And in order to do it, we need to change some of the outlandish and outrageous conditions that are put on us by the 50 states and Washington, D.C. So I would just like to ask for uniformity and simplicity from the low level part of the manufacturers who actually have to write the process.

Thank you.

MS. HARRINGTON: Thank you, Mr. Mathieson.

Now we have, is it Lestanja or Lestanja Baker from For The Record, Inc., Waldorf, Maryland (301) 870 -8025
Toyota.

MS. BAKER: Yes. Is

MS. HARRINGTON: Did I mispronounce your name?

MS. BAKER: Lestanja is correct. Thank you. And I also have enjoyed the conversation today but wanted to at least make the same plea that Bob made. So my statements are going to be redundant at this point.

Because I also am charged with the responsibility of knowing when a car has to have a disclosure and what the disclosure must say and when a title has to be branded.

And the overwhelming I think here is the variety of triggers and the variety of disclosure that has to be made. And so I would strongly request again simplicity. I think we support John 100 percent when he says we would take the toughest standard out there.

And as long as we had to do it in all of the states where we resell vehicles, we would be happy to do that because it not only serves us but it serves our consumers. And I would like to, at least on Toyota's behalf, say that we are interested in the consumers having information about the history of these vehicles when they go in to buy them.

MR. MATHIESON: Here, here.

MS. HARRINGTON: Thank you, Lestanja.

We're going to conclude. And I'm going to do the
same thing at the closing that we did at the outset this morning. And that is, I'd like to ask each of the participants this time to give me in one sentence your sense of whether we came close to meeting your expectations as you stated them at the outset.

And I know it's hard to do that in one sentence. But yes or no, you know, would work. And we would take more. But, you know what, I'd like to know whether we came close to meeting your expectations today.

Let me start with Rosemary, the Petitioner.

MS. SHAHAN: I think, I feel like it remains to be seen.

MS. HARRINGTON: Okay.

MS. SHAHAN: I definitely appreciated the opportunity.

MR. GILLIS: Yes.

MS. HARRINGTON: Janet.

MS. SMITH: I'd have to say yes. And there's one more thing I'd have to say. If there was one thing I could take back to my boss as to what impressed me the most today, it would have to be the last part where the manufacturers did express almost uniform agreement that if they had to meet the toughest standard, they would go along with that. I think that would be something that will impress at least

For The Record, Inc., Waldorf, Maryland (301) 870 -8025
my attorney general.

MS. HARRINGTON: Phil.

MR. NOWICKI: Yes.

MS. GLASSMAN: Yes.

MR. JOHNSON: No.

MS. HARRINGTON: Lori.

MS. COHEN: Yes.

MS. BOWERS: Yes.

MR. TATERKA: I think the dialogue was real helpful. But I guess I still just don't know whether or not we're going to be able to work out some of the details. I'm hopeful that we are. But at least I think the dialogue really was helpful.

MR. GRAHAM: I agree with Steve. I have been in enough of these meetings where people start screaming and yelling at each other that this is certainly refreshing. But I think the result is unclear.

MR. KITZMILLER: Yes.

MS. SCHWARTZ: Yes.

MR. MAIER: I think we need to know more about where exactly the next step would be headed.

MR. DOWDY: I think the idea of having the group come together in terms of the disclosure, the actual disclosure is very helpful because then, once knowing what a disclosure, the content of the disclosure is, we can then go
on to the vehicle for that disclosure.

MS. PHELPS: Yes.

MR. WHATLEY: I guess in my mind it depends on what
happens with the smaller group.

MR. COHN: I agree. I think that remains to be
seen. I think some progress was made. So a hesitant yes.

MR. VELEZ: Yes.

MR. HILE: I think substantial progress was made
toward the goal that I had here, which was to get additional
information to help the staff make a recommendation to the
Commission about what we should be doing.

MR. MULHOLLAND: I feel the same way. I learned a
lot.

MS. DANIELSON: Yeah. And the same thing. I saw a
lot of movement today that I didn't think we were going to
see. So I'm coming away very hopeful. It will depend,
however, on the results of this task force.

MS. HARRINGTON: Well, I think I'm more optimistic
than Evan, just by nature.

(Laughter.)

MS. HARRINGTON: But I am very pleased with the
quality of the dialogue and the effort that people have made
to listen and respond to one another. And I'm hopeful that
you all can figure out a way to advance this.

As we said at the outset, the staff of the
Commission is reviewing the petition that gave rise to this
workshop. We will look forward to hearing in a month from
Jack on behalf of the work group or the whole work group.

And we will continue to study these issues. And it
is our goal, the staff's goal, to make a recommendation to
the commission, but I don't know what it will be, with
respect to the petition that the Commission has received.

So that is what we expect will be happening at some
point in the not terribly distant future, but certainly it
will be after we hear back from this group that's going to
see whether consensus is possible.

Does anyone among the participants have any
questions about process for us? Otherwise we will conclude.

(No response.)

MS. HARRINGTON: Well, thank you very much.

(Whereupon, the proceedings concluded at 3:50 p.m)
CERTIFICATION OF REPORTER

DOCKET/FILE NUMBER:

CASE TITLE: Public Forum on Vehicle Buyback Disclosures

HEARING DATE: October 3, 1996

I HEREBY CERTIFY that the transcript contained herein is a full and accurate transcript of the notes taken by me at the hearing on the above cause before the FEDERAL TRADE COMMISSION to the best of my knowledge and belief.

DATED: October 15, 1996

Jayne M. Toering
