

*[Email to be sent to all iV Bars customers who received a Myers Cocktail before March 1, 2017 at either the Addison or Southlake, Texas locations]*

Dear iV Bars customer:

We're writing because you bought the Myers Cocktail from iV Bars. We're contacting our customers to tell them:

- Contrary to our marketing materials, scientific studies have **not** shown that the Myers Cocktail is an effective treatment for any disease, including cancer, angina, cardiovascular disease, congestive heart failure, myocardial infarction, multiple sclerosis, diabetes, fibromyalgia, or neurodegenerative disorders.
- Before using any alternative treatment for a disease, talk to your doctor or healthcare provider.
- Talk to your doctor or healthcare provider before stopping any treatment they have prescribed.
- Speaking with your healthcare provider is important to make sure all aspects of your medical treatment work together. Things that may seem safe—like vitamins, minerals, or amino acids—may interfere with other medicines and could cause serious health risks.

If you have any further questions, please feel free to contact me.

Sincerely,

Aaron K. Roberts  
iV Bars, Incorporated
