2 - - - - -

3 CHAIRMAN SIMONS: Good afternoon everyone and

4 welcome.

5 The Commission is meeting today in open

6 session to hear oral argument In the Matter of

7 Impax Laboratories, Inc., Docket Number 9373, on the

8 appeal of complaint counsel from the initial decision

9 issued by the administrative law judge.

10 The respondent is represented by

11 Mr. Ted Hassi.

12 Complaint counsel are represented by

13 Mr. Chuck Loughlin.

14 During this proceeding, each side will have

15 45 minutes to present their arguments.

16 Complaint counsel will make the first

17 presentation and will be permitted to reserve time for

18 rebuttal.

19 Counsel for respondent will then make his

20 presentation.

21 And complaint counsel will conclude the

22 argument with a rebuttal presentation.

23 Mr. Loughlin, I understand you want ten minutes

24 for rebuttal; is that correct?

25 MR. LOUGHLIN: Correct.

1 CHAIRMAN SIMONS: Perfect. And the bailiff
2 will note that.
3 Mr. Loughlin, would you like to introduce your
4 colleagues at the table?
5 MR. LOUGHLIN: Yes.
6 With me at counsel table is Maren Schmidt,
7 Brad Albert and Markus Meier.
8 CHAIRMAN SIMONS: Welcome.
9 And Mr. Hassi, would you like to introduce your
10 colleagues?
11 MR. HASSI: I would. Thank you, Mr. Chairman.
12 With me from O'Melveny are Mike Antalics,
13 Steve McIntyre and Mr. Ben Hendricks.
14 CHAIRMAN SIMONS: Perfect. Welcome.
15 So, Mr. Loughlin, you may begin when you're
16 ready.
17 MR. LOUGHLIN: Thank you, Mr. Chairman,
18 Commissioners.
19 The initial decision in this case found that
20 Endo paid Impax a large and unjustified reverse payment
21 in exchange for Impax agreeing not to market its
22 generic product until January of 2013.
23 The initial decision found that this restraint
24 resulted in exactly the type of anticompetitive harm
25 described by the Supreme Court in Actavis, a large

1 payment to prevent the risk of competition.
2 Now, despite this harm, the initial decision
3 dismissed the complaint. The initial decision found
4 the reverse payment agreement justified because the
5 settlement agreement contained a license to patents
6 that Endo might acquire in the future. That was
7 error.
8 There is no dispute in this case that any
9 benefits from a license to Endo's future patents did
10 not flow from the challenged restraint.
11 The challenged restraint in this case is
12 Impax' agreement not to enter until January of 2013 in
13 exchange for a large and unjustified payment. The
14 initial decision found that at page 99 of its
15 decision.
16 Importantly, Impax did not assert in this case
17 that any benefits from a license to Endo's future
18 patents flowed from the challenged restraint, and the
19 initial decision did not make any such finding.
20 And so the question on appeal is whether Impax
21 needed to show that its procompetitive benefits flowed
22 from the challenged restraint. Standard rule of reason
23 case law says yes. But the initial decision did not
24 require that. And that decision should be reversed.
25 Now, in Actavis, the Supreme Court addressed

1 the impact of reverse payment agreements on generic
2 competition, taking into account the statutory scheme
3 of the Hatch-Waxman statute, the FDA approval process,
4 and the patent laws. And the Supreme Court explained
5 that reverse payment agreements are problematic because
6 they allow the branded incumbent to co-opt its generic
7 competitor by sharing monopoly profits that are
8 preserved from this avoidance of competition.
9 And Actavis makes that point clearly at
10 570 U.S. at 154. It says, "Payment in return for
11 staying out of the market simply keeps prices at
12 patentee-set levels, potentially producing the full
13 patent-related monopoly ... return while dividing that
14 return between the challenged patentee and the patent
15 challenger. The patentee and the challenger gain; the
16 consumer loses."
17 So under a reverse payment agreement, the
18 brand is better off because it avoids the risk of what
19 could be devastating generic competition, and the
20 generic is better off because it gets certain revenue
21 that often is more than it could earn by competing.
22 The losers are consumers, because consumers are
23 deprived of the possibility that generic entry might
24 occur if the competitive process was allowed to play
25 itself out.

1 And this case fits squarely into those
2 concerns that were addressed by the Supreme Court in
3 Actavis.
4 This reverse payment agreement was reached
5 just days before Impax was set to get FDA approval to
6 market its generic version of Opana ER.
7 Endo had sued Impax for patent infringement in
8 2008. That suit triggered a 30-month stay of FDA
9 approval.
10 After that 30-month stay, the FDA was allowed
11 to approve the generic version of Opana ER even if the
12 patent case was still ongoing, and that's what happened
13 here.
14 In mid-May of 2010, Impax got what's called
15 tentative approval, which means that a month later it
16 would get final approval.
17 Endo read about that in the papers, understood
18 that it meant Endo [sic] was on the verge of getting
19 final approval, and so it quickly contacted Impax to
20 discuss settlement.
21 The parties negotiated very quickly and had a
22 signed settlement agreement by June 7, 2010. This was
23 about a week before Impax was expected to get final
24 approval.
25 Under that settlement, Impax agreed not to

1 launch its generic version of Opana ER for two and a
2 half years, 30 months, until January of 2013.
3 In other words, just as the 30-month stay
4 under the Hatch-Waxman Act was expiring, Endo secured
5 another 30-month stay. But it wasn't entitled to a
6 30-month stay under the Hatch-Waxman Act or under FDA
7 regulations, so it bought that 30-month stay from Impax
8 through a no-AG agreement.
9 COMMISSIONER PHILLIPS: Counsel, is it your
10 position that they could have launched at that point,
11 at the point of the entry into the settlement
12 agreement?
13 MR. LOUGHLIN: That Impax could have launched?
14 COMMISSIONER PHILLIPS: You said they bought
15 30 additional months.
16 MR. LOUGHLIN: Yes. Impax -- well, Impax --
17 at the time of the settlement, they didn't have final
18 FDA approval to launch. They got that a week later.
19 But as of mid-June -- I think it was June 14, 2010 --
20 they had FDA approval to launch and they could have
21 launched.
22 COMMISSIONER PHILLIPS: Legally, but --
23 MR. LOUGHLIN: Legally, correct.
24 Whether they would have launched is a
25 different story. We don't know the answer of whether

1 or not they would have launched.
2 What we do know is they were doing active
3 preparations to launch. They had filed for FDA
4 approval. They had engaged in a patent case. They
5 had gone out to customers to get letters of intent
6 that they -- customers would buy their generic
7 product.
8 They had gotten approval from the DEA to
9 purchase oxymorphone, which is a controlled substance.
10 It's an opioid product. They had formulated that into
11 pills and put it -- packaged it into bottles, so they
12 were -- they were on the verge of potentially
13 launching.
14 COMMISSIONER PHILLIPS: For purposes of
15 assessing the impact of the eliminated risk, which is
16 sort of our theory of harm, right, under Actavis,
17 what's the time frame at which we're looking?
18 MR. LOUGHLIN: We're assessing whether there
19 was an elimination of the risk of competition as of the
20 date of the settlement, because that's the time when
21 the elimination occurs. That's when the
22 anticompetitive harm, again, the elimination of the
23 risk of competition, occurs.
24 When that settlement happens as of June of
25 2010, the risk of competition is gone, so long as Impax

1 abides by its agreement not to enter until January of
2 2013, which of course they did.
3 COMMISSIONER SLAUGHTER: Counsel, I think what
4 my colleague is pointing to are the points in the
5 initial decision that make very clear, in the view of
6 the administrative law judge, that Impax would not
7 have launched at that point, not that it could not.
8 But the question I have for you that I think
9 is important is, the information that we might have
10 now about whether Impax was about to launch or not,
11 was any of that information that Endo had access to in
12 assessing the risk of launch?
13 MR. LOUGHLIN: Yes.
14 Certainly Endo was well aware that Impax had
15 filed with the FDA for approval of its generic version.
16 Endo knew that Impax had gotten tentative FDA approval
17 and therefore was about to get final FDA approval on
18 June 14, 2010.
19 It's uncertain -- unclear whether Endo knew
20 about Impax' internal operations in terms of preparing
21 for launch. There's no evidence that they did know
22 that.
23 But we do know that Impax was going out into
24 the market to get letters of intent from customers.
25 Again, I don't know whether or not Endo knew that.

1 There's nothing in the record that suggests Endo knew
2 that one way or the other.
3 But what we do know is that Endo was planning
4 internally that it would launch in July of 2010 in
5 response to Impax's launch, so it was fully expecting a
6 potential launch by Impax in the summer of 2010, and it
7 was preparing its own response -- its own responsive
8 launch afterwards.
9 Endo was doing its own preparation for
10 creating generic versions of its product, putting those
11 in bottles, getting itself ready to launch what's
12 called an authorized generic in July of 2010.
13 COMMISSIONER CHOPRA: So even if we believe
14 that it was very unlikely or extremely unlikely that
15 Impax would launch at risk, are you arguing that we
16 should only consider the fact that Endo was paying and
17 Endo perceived that there was a risk of competition,
18 and therefore, that's the point of analysis?
19 MR. LOUGHLIN: That is the primary point of
20 analysis, is did Endo perceive a risk of competition
21 and did it pay to avoid that risk of competition.
22 Now, we believe the risk of competition was
23 real, that Impax in fact had made preparations,
24 including filing with the FDA, going through that
25 process, all the way up to getting -- almost to getting

1 FDA final approval.
2 So there was a real risk to Endo that Impax
3 might launch. Whether or not they actually would have
4 launched is not part of the analysis.
5 COMMISSIONER CHOPRA: So what should we use,
6 real risk or perception of risk?
7 MR. LOUGHLIN: I think the key is perception
8 of risk, but that perception has to be based on
9 something, and here it was based on something.
10 There was in fact a risk to Endo because Impax
11 was on the verge of getting FDA approval. It had --
12 it had gotten tentative approval and was a week away
13 from getting final approval, which would have allowed
14 it to market its product. Endo knew that and was
15 preparing.
16 So there was a real risk to Endo that this
17 product would come in in competition with its branded
18 product.
19 CHAIRMAN SIMONS: And so that's the thing you
20 focus on even if it had been the case that Impax's board
21 had determined absolutely, positively never to enter at
22 risk?
23 MR. LOUGHLIN: That -- those -- that of course
24 were not the facts. But Endo's board had not made
25 that determination. In fact -- or excuse me. Impax'

1 board had not made that determination. And in fact,
2 Impax' management was letting the board know that it
3 might come to it later to make a recommendation of a
4 launch.
5 But the point isn't what was going on with
6 Impax specifically in terms of how real was the risk.
7 There was a risk. And if there was a risk, Endo cannot
8 pay to avoid their patent risk. That's the
9 anticompetitive harm under Actavis.
10 COMMISSIONER WILSON: Let me talk for a minute
11 about the payment.
12 How would you characterize the payment that
13 Endo made to Impax? Is it the no-AG provision? Is it
14 the no-AG provision plus the Endo credit? Does it also
15 include the broad license?
16 MR. LOUGHLIN: The payment is certainly the
17 no-AG agreement backed by the Endo credit, because the
18 Endo credit ensured that one way or another Impax was
19 going to see value through this payment.
20 Our view is that it also includes the
21 $10 million payment as part of the development and
22 co-promotion agreement for this product IPX-203.
23 It is not our contention that the payment
24 includes a license to future patents. That is not a
25 payment under Actavis.

1 COMMISSIONER WILSON: Would a no-AG provision
2 from here on out, in your view, always constitute a
3 payment, or are there circumstances under which a
4 no-AG provision would not be viewed as a payment?
5 MR. LOUGHLIN: It's hard to know whether or
6 not in all cases a no-AG would be a payment. It might
7 always be a payment. Whether it would be a large
8 payment probably would depend on the circumstances.
9 As I sit here, I can't think of a reason why a
10 no-AG agreement would not be a payment, but it's
11 certainly possible it might not be a large payment.
12 COMMISSIONER CHOPRA: Why don't we look at all
13 forms of consideration given, including the broad
14 license, including all the exchange of value?
15 MR. LOUGHLIN: Because at issue isn't
16 consideration or value transfer. It's whether or not
17 there is a payment in the shape of a sharing of the
18 brand's monopoly profits from the avoidance of
19 competition.
20 COMMISSIONER CHOPRA: So how do you
21 disaggregate that? Isn't it all fungible?
22 MR. LOUGHLIN: No, it's not all fungible.
23 In a reverse -- in a settlement agreement
24 without any payments in it, the brand and the generic
25 are in opposition to each other, and they are going to

1 work out a compromised entry date based on their
2 respective views of the strength of the patent merits,
3 in opposition to each other.
4 With a reverse payment that shares the monopoly
5 profits, their incentives are now aligned. The generic
6 no longer wants to erode a patent monopoly because it's
7 benefiting from that monopoly through a sharing of the
8 profits of that monopoly.
9 Now, by contrast, a license to future patents
10 doesn't align incentives. It doesn't provide the
11 generic with a sharing of monopoly profits. It's just
12 like a split of a patent life. It's just there's more
13 patents involved.
14 And so it's -- the generic only gets value by
15 competing against the brand, by putting its product on
16 the market, eroding the monopoly power of a brand, and
17 so it's not a sharing of brand monopoly -- it's not a
18 sharing of those brand monopoly profits through the
19 avoidance of competition. It's a value that's been
20 created because of competition, so it's not a reverse
21 payment under Actavis.
22 COMMISSIONER PHILLIPS: So we get how sitting
23 here today we can look at different provisions and
24 apply the rule you're talking about, in particular, if
25 we get to tie particular provisions to the limitation

1 of when Impax could enter the market. But they're all
2 part of a deal, right, and they're all value that flow
3 at the same time to Impax. And with respect to the
4 freedom to operate, that helps guarantee Impax the
5 benefit of the bargain; right? They get to be safe in
6 selling their generic moving forward.
7 So why -- how do we get to take them out of the
8 that bucket, right, how do we dissociate them in the
9 way that you want us to do?
10 MR. LOUGHLIN: Because the question under the
11 rule of reason is what is the challenged restraint and
12 do the procompetitive benefits flow from that
13 challenged restraint, are they supported by that
14 challenged restraint.
15 So, for example, in Realcomp, there was a
16 multiple listing service that had procompetitive
17 benefits. That was found in the decision. But the
18 Commission challenged a specific part, a specific
19 provision of that multiple listing service set of
20 rules and regulations because it focused on a provision
21 that restricted access to the multiple listing service
22 by discount brokerages.
23 And what it found was there was -- the
24 benefits of the multiple listing service as a whole did
25 not flow from that restraint. In other words, that

1 restraint did not further those procompetitive
2 benefits.
3 The same is true here. There is no suggestion
4 by Impax that its agreement not to enter until
5 January 2013 in exchange for a large and unjustified
6 payment benefited consumers, that that was
7 procompetitive in any way. It said that we got a
8 license as part of a settlement and that the settlement
9 as a whole contained that license, but there's no
10 connection that Impax makes or that was found in the
11 record --
12 CHAIRMAN SIMONS: How about this? Suppose it
13 were the case that there would have been no settlement
14 at all without the payment. Isn't that -- in that
15 case, is it your sense that the freedom to operate or
16 the licenses to those other patents then becomes more
17 relevant?
18 MR. LOUGHLIN: No.
19 Your question was whether there would be no
20 settlement without the payment?
21 CHAIRMAN SIMONS: Yes.
22 So there's no settlement without the payment,
23 right, and that settlement includes the freedom to
24 operate, the license to those other patents.
25 MR. LOUGHLIN: No, that -- that doesn't change

1 the analysis at all.
2 Again, the payment to avoid the risk of
3 competition is anticompetitive harm.
4 So if the settlement wouldn't have occurred
5 without that payment -- this is discussed in Cipro --
6 Cipro says, well, that's fine. Then we don't have
7 anticompetitive settlements. That's a good thing.
8 Now, had that happened, we don't know what
9 would have happened. It could be the parties would
10 have litigated and Impax would have come on sooner. It
11 could have meant they would have reached a different
12 agreement with the same license there, the same license
13 to future patents in it, but no payment.
14 We don't know what would have happened. We
15 don't need to probe what would have happened. That's
16 an injury question, not a violation question.
17 The point here is that what we know is that
18 the settlement did include a reverse payment in
19 exchange for Impax' agreement not to enter --
20 CHAIRMAN SIMONS: Let me stop you there for a
21 second.
22 So this is a case in which it turns out, in
23 hindsight, that the license to those other patents was
24 really important, because Endo managed to exclude every
25 other generic manufacturer with those other patents

1 subsequently.
2 And so if you're talking about a situation in
3 which there is no settlement and Impax gets no license
4 to those other patents, then Impax is not in the market
5 once those patents are exercised.
6 MR. LOUGHLIN: Well, no --
7 CHAIRMAN SIMONS: Isn't that something we'd
8 want to balance off of the earlier entry?
9 MR. LOUGHLIN: No. No. Because we don't know
10 if that's true.
11 CHAIRMAN SIMONS: Well, it's kind of
12 probabilistic, right, so it's probabilistic for those
13 additional patents, but it's also probabilistic for
14 whether earlier entry would have occurred, so it's the
15 same type of effect.
16 MR. LOUGHLIN: Right. But the Supreme Court
17 is not looking at whether entry would have occurred.
18 The harm is not delayed entry. The harm is the
19 prevention of the risk of competition. It's the
20 corruption of the competitive --
21 CHAIRMAN SIMONS: No. I get that.
22 So it's the corruption of the risk of
23 competition from the delayed -- potential delayed
24 entry. But then there is a potential procompetitive
25 effect as well, and you know, even if it's not a

1 hundred percent or even if it's relatively low, it may
2 be significant nonetheless, so don't you want to
3 compare the probabilities and the magnitudes of those
4 two things, the access to the market afterwards based
5 on those additional patents versus the loss of the
6 entry based on the original patent that comes from the
7 settlement agreement?
8 MR. LOUGHLIN: No.
9 For purposes of determining whether there's an
10 anticompetitive effect, whether complaint counsel has
11 satisfied its case in chief, the question is whether or
12 not there was a payment to avoid the risk of
13 competition at the time.
14 Here, we know that happened. There were in
15 fact possible speculative procompetitive benefits from
16 the license, but the first step in the -- the second
17 step in the rule of reason after you find an effect is
18 do those benefits flow from the restraint. They didn't
19 flow from the restraint.
20 CHAIRMAN SIMONS: Well, they might flow from
21 the restraint if in fact what's going on is the only
22 reason you get that settlement with those types of
23 licenses occurring is because of the payment. If
24 there's no -- if the only way to get that kind of a
25 settlement is through a payment, then isn't -- it seems

1 to me that the licenses are a direct result of the
2 payment.
3 COMMISSIONER SLAUGHTER: To follow on the
4 Chairman's comment and question, isn't it also the case
5 that Impax sought similar licenses in other settlements
6 that didn't include payments?
7 I think that was in the record that they had --
8 that it was established that they had similarly sought
9 freedom-to-move licenses in other settlements of
10 litigation.
11 COMMISSIONER WILSON: And then to follow on to
12 that set of questions, the record shows that the ALJ
13 found that when the new negotiators arrived on the
14 scene, all they wanted was a simple settlement
15 involving only a date. Endo rejected that and went
16 back to the original package that had been negotiated,
17 and the new negotiators for Impax said, We're not going
18 to take that without a broad license.
19 And so they seemed to require, based on the
20 findings of the ALJ, a broad license to
21 induce them to settle, and so I'm wondering what those
22 facts say about ancillarity here.
23 COMMISSIONER PHILLIPS: Not to interrupt to
24 interrupt to interrupt, but those facts also include --
25 and this is in your brief -- Impax being aware of the

1 fact that Endo had pending patent applications, so
2 they get the concession and they know something is
3 coming.
4 MR. LOUGHLIN: So -- yes. Impax -- the record
5 shows that Impax tries to get licenses to future
6 patents in every settlement that it does. Their lawyer
7 came in and put that evidence on the record.
8 In terms of -- Commissioner Wilson, in terms of
9 your question, the facts are not quite the way you
10 described them.
11 After Impax's representatives asked to go back
12 to a license with no payments, just an earlier entry
13 date, what Endo did was put more money on the table.
14 They said, No, but we'll give you more money in the
15 DCA.
16 Subsequent to that, the parties -- and Impax
17 also said, Oh, by the way, we also would like a
18 license to future patents, and that was included in the
19 settlement agreement.
20 Now, there is no Impax -- excuse me. There is
21 no evidence in the record that Impax needed a payment
22 to settle. They have not made that argument in this
23 case. There's no finding that they needed a payment to
24 settle this case.
25 But the key point again for the rule of reason

1 is not whether or not there would have been a
2 settlement without this license. Under the rule of
3 reason, the question is, is the challenged restraint,
4 which, again, is the agreement to pay Impax in exchange
5 for this January 2013 entry date, is that restraint
6 procompetitive, does that restraint have offsetting
7 procompetitive benefits that benefit consumers.
8 There's no evidence that it does.
9 COMMISSIONER SLAUGHTER: So can I -- and can I
10 go back to -- the Chairman was asking don't we have to
11 look at the benefits that actually flowed from that
12 freedom-to-move license with the benefit of hindsight.
13 I'd pose the question the other way.
14 We want, I think as a general public policy
15 principle, parties to know at the time they enter into
16 an agreement whether that agreement is legal or
17 illegal, right.
18 So if we base the magnitude of the benefits on
19 facts that develop after the agreement is made, don't
20 we then create a long-term risk of uncertainty both for
21 the parties and a situation where parties can't
22 actually know whether the settlement into which they're
23 entering will be legal or not legal?
24 MR. LOUGHLIN: Yes. That is completely right.
25 But I want to go back to something you started

1 with, which is the question of whether or not we have
2 to look at whether the freedom-to-operate license had
3 procompetitive benefits or not.
4 The answer is we don't have to look at that
5 because the procompetitive benefits that matter are
6 those that flow from the challenged restraint. Here,
7 they did not.
8 But you're absolutely right. Even if we did
9 look at those --
10 COMMISSIONER PHILLIPS: Sorry. Finish your
11 answer.
12 MR. LOUGHLIN: Even we did look at those, you
13 would end up with a legal regime in which the
14 settlement might be unlawful if a patent was found
15 invalid at the district court and then found lawful
16 again if the appellate court found the patent was
17 valid, and then it would be unlawful again if the
18 district court found that the product was not
19 infringing. That doesn't make any sense.
20 I mean, there would be no certainty, and
21 that's not the way antitrust law is designed to work.
22 COMMISSIONER PHILLIPS: What I was going to
23 ask is this.
24 The restraint as you describe it is paying for
25 delay; right?

1 MR. LOUGHLIN: No. I would not agree with
2 that.
3 COMMISSIONER PHILLIPS: I'm sorry. Forgive the
4 characterization.
5 It's the money flowing, right, in return for
6 eliminating the risk.
7 MR. LOUGHLIN: Correct.
8 COMMISSIONER PHILLIPS: Those are two aspects
9 of a broader agreement, but the agreement doesn't --
10 it's not like the DCA, where we have kind of one side
11 and the other side.
12 I don't -- what I'm having trouble doing is
13 delinking other aspects of the agreement, in this case
14 the freedom to operate, which flowed to Impax as part
15 of the deal. Why isn't that consideration just like
16 the rest of the payment is consideration? Other than
17 this ex ante description that we like it or we don't,
18 how do we decouple them?
19 MR. LOUGHLIN: The freedom-to-operate license
20 is consideration, but that's not the relevant
21 question. The relevant question is whether or not the
22 challenged restraint, which here is the payment to
23 eliminate the risk of competition, whether that
24 restraint supports the procompetitive benefit that
25 Impax is proffering.

1 Impax is proffering a procompetitive benefit
2 of a freedom-to-operate license. But Impax has never
3 made the assertion that it needed to be paid to accept
4 a license that benefited it. There's no finding to
5 that effect, and there's no finding that the payment to
6 avoid the risk of competition benefited consumers, so
7 you don't need to get to that analysis.
8 Now, to your question, if your question is why
9 isn't -- if your question is why isn't that a reverse
10 payment, why isn't the license a reverse payment, the
11 answer is that under Actavis, a reverse payment is the
12 sharing of monopoly profits through the avoidance of
13 competition.
14 Again, the license didn't do that. The license
15 to future patents doesn't share monopoly profits. It
16 only creates value when Impax competes and erodes
17 monopoly profits.
18 COMMISSIONER SLAUGHTER: Can I ask, what would
19 be the procompetitive benefits that would flow, some
20 examples of procompetitive benefits that would flow
21 from a restraint specifically?
22 MR. LOUGHLIN: In this case?
23 COMMISSIONER SLAUGHTER: Yes. In this case or
24 as a general matter.
25 If we're only looking at the challenged

1 restraint as the agreement to -- as a payment to avoid
2 the risk of competition, what would be the procompetitive
3 benefits that could flow from such a restraint?
4 MR. LOUGHLIN: In terms of reverse payment
5 agreements specifically, it's hard to come up with a
6 procompetitive benefit that flows from a reverse
7 payment agreement.
8 Certainly the Supreme Court identifies certain
9 possible justifications, that the payment was simply
10 for offsetting saved legal expenses and therefore
11 helped with settlement, that the payment was not for
12 the agreement to avoid competition but was in fact for
13 some other deals and side deal that benefited consumers
14 by the creation of a new product, for example. And the
15 Supreme Court identifies other potential -- says that
16 there are other possible justifications. It doesn't
17 identify any.
18 Impax hasn't come up with any, and so what
19 I -- and maybe I don't -- I don't know the answer to
20 that question.
21 COMMISSIONER WILSON: So Hatch-Waxman struck a
22 fantastic compromise between incentives to innovate
23 and encouraging competition, and I think one of the
24 incentives embedded in Hatch-Waxman is a preference
25 for P-IVs that would put the patent at issue and then

1 allow earlier entry than otherwise. But in exchange
2 for the cost, the transaction cost, and the litigation
3 uncertainty, Hatch-Waxman provides to the generic
4 180 days of exclusivity if it is the first to file.
5 And so could we think about a no-AG provision
6 as a clause that allows the generic to have
7 exclusivity during that first 180 days, which in turn
8 continues to incentivize generics to go the P-IV route
9 instead of the P-III route, which improves competition
10 generally?
11 MR. LOUGHLIN: I don't think that's the proper
12 way to think about the 180-day exclusivity period
13 because Congress and the FDA regulations do not ensure
14 that the 180 days are exclusive. It allows brands to
15 launch authorized generics.
16 And when the brand agrees not to do that, it
17 is effectively creating a generic monopoly during that
18 180-day exclusivity period, and it is sharing profits
19 that it would earn as an authorized generic with the
20 generic, so it is a sharing of profits from an
21 avoidance of competition, and therefore it's a reverse
22 payment. It's not a benefit.
23 COMMISSIONER WILSON: Is that payment then different from a
24 sharing of monopoly profits during the latter, in other

1 words, before the generic enters?
2 MR. LOUGHLIN: It's different in the form in
3 which it's occurring, but it is still a sharing of
4 benefit from the avoidance of competition rather
5 than --
6 COMMISSIONER WILSON: But this time it's the
7 generic that's avoiding competition, not the brand.
8 MR. LOUGHLIN: Well, in the 180-day
9 exclusivity period, it's the brand that's avoiding
10 competition, right, it's the -- the generic is
11 avoiding competition from the brand, yes.
12 So the brand is giving a benefit to the
13 generic in the form of its avoidance of competition,
14 which allows the generic to earn higher generic prices
15 than it otherwise would had the authorized generic
16 come in and competed, and so the brand is shifting to
17 the generic the value that it would otherwise earn
18 through competing to the generic through this no-AG
19 agreement. That's why it's a reverse payment.
20 COMMISSIONER WILSON: But you've told us that
21 the categories of value are not fungible. And I think
22 at the beginning we were talking about how the payment
23 is a sharing of the monopoly profits that the brand
24 would earn through avoidance of competition and now
25 we're talking about the value that the generic would

1 get from avoiding competition.
2 Do you view those two things as fungible?
3 MR. LOUGHLIN: I'm not sure if "fungible" is
4 the right word, but they are both -- I view both of
5 them as reverse payments in the sense that they are
6 both payments flowing to the generic from the
7 avoidance of competition, as a result of the avoidance
8 of competition. Whether it's the generic's avoidance
9 or the brand's avoidance, they are both the value that
10 has been created from not competing rather than from
11 competing, and that's the reverse payment.
12 COMMISSIONER CHOPRA: So what if Endo -- let's
13 put aside the cash payment and the no-AG clause.
14 What if Endo had given a basket of other
15 patents, including the broad patent license for the
16 drug at question? Would that be a reverse payment?
17 MR. LOUGHLIN: No. I don't think so.
18 If Endo had simply given to Impax an agreement
19 to come on the market with a compromised entry date
20 plus rights to additional patents that Endo might get
21 in the future, I don't think that would be a reverse
22 payment.
23 COMMISSIONER CHOPRA: But by that logic,
24 wouldn't it be indirectly sharing monopoly profits?
25 So if they're getting the delay, and on

1 ancillary patents that are completely unrelated to the
2 drugs they're providing value to Impax, why isn't that
3 using -- their offsetting revenues from those patents,
4 assuming they're royalty-free, why wouldn't that be a
5 payment?
6 MR. LOUGHLIN: Again, because it's not a
7 sharing of profits from avoiding competition. That
8 benefit only accrues to Impax if it actually puts a
9 product on the market and uses those patents to compete
10 with Endo.
11 So its benefit is coming from competition, not
12 from the avoidance of competition. That's the
13 difference between a reverse payment and other forms
14 of consideration, which are included in an agreement,
15 but which are not problematic forms under Actavis.
16 COMMISSIONER CHOPRA: It just seemed like
17 you're blurring --
18 CHAIRMAN SIMONS: He's out of time.
19 COMMISSIONER CHOPRA: Oh.
20 CHAIRMAN SIMONS: Mr. Hassi.
21 MR. HASSI: Mr. Chairman, Commissioners,
22 Impax's settlement with Endo is procompetitive. It was
23 procompetitive at the time it was signed, and it's
24 procompetitive today.
25 There's no dispute that Impax sought and

1 obtained the earliest entry date it could. Impax' goal
2 throughout was to get in and sell generic Opana ER as
3 early as it could, but with meaningful protection
4 against infringement.
5 CHAIRMAN SIMONS: So are you telling us that if
6 Impax had gone to Endo and said "You know what, that
7 no-AG thing, forget about that, we'll just take one
8 week earlier" that they couldn't have gotten another
9 week?
10 MR. HASSI: The record doesn't reflect that
11 because complaint counsel never asked that question of
12 Endo. There's certainly no evidence in the record that
13 Impax could have gotten an earlier date.
14 With respect to the no-AG --
15 CHAIRMAN SIMONS: So for 23 or 33 million
16 dollars they couldn't have gotten an extra week?
17 MR. HASSI: Respectfully --
18 CHAIRMAN SIMONS: Endo as a profit-maximizing
19 institution, Endo wouldn't have gone for that?
20 MR. HASSI: Respectfully, Mr. Chairman, the
21 no-AG was in there on the very first term sheet, and it
22 was a March 2013 entry date. Impax negotiated and got
23 earlier dates.
24 Hypothetically, could they have pushed terms
25 off that sheet and gotten earlier dates? We don't

1 know, except, as Commissioner Wilson pointed out,
2 toward the end of the negotiations, Chris Mengler, who
3 was the prime negotiator for Impax, stepped away.
4 Art Koch, who was the company's CFO, said that they
5 need to forget all this mess, we'll take an entry-only
6 settlement date, and Endo said no, they wouldn't do
7 it.
8 So regardless of what Impax could have asked,
9 they asked for that, and they didn't get it.
10 So an entry-only-date settlement was not made
11 available to them. They settled on the terms that they
12 got.
13 CHAIRMAN SIMONS: I'm sorry. It wasn't made
14 available to Impax.
15 MR. HASSI: It wasn't made available to Impax.
16 Impax can't settle alone. It's being sued by
17 Endo. That means Endo had to agree to these things.
18 They put that on the table. They said, We'll take
19 entry date only.
20 That was the very first settlement offer they
21 made in the fall of 2009. It was the very last
22 settlement offer they made in June of 2010 before they
23 settled on the terms --
24 CHAIRMAN SIMONS: When they said, We'll take
25 entry date only, what was the date on the table?

1 MR. HASSI: What was the date on the table?
2 CHAIRMAN SIMONS: Yes.
3 MR. HASSI: The first time, they asked for what
4 the -- an entry date that Actavis got, which was an
5 earlier entry date. I forget the date, but I think it
6 was in 2011.
7 Endo said no. Endo said, We're not going to
8 give you that date, forget it, it's off the table.
9 We'll think about a date splitting between when the
10 litigation would end and when the patents expire,
11 which the patents didn't expire until the fall of
12 2013.
13 And Impax said, Well, maybe we'll just launch
14 at risk. Endo laughed them off. And they didn't get
15 there. They didn't reach a settlement.
16 The second time around, there wasn't
17 discussion of an explicit date. They just said, We
18 want an entry date-only settlement. I'm sorry. They
19 may have said -- and I'd have to check the record.
20 They may have referenced the Actavis date. But what I
21 remember is, they asked for an entry date-only
22 settlement, and Endo said no.
23 COMMISSIONER SLAUGHTER: But it matters, it
24 matters what that date is, because it's not accurate
25 to say they couldn't get any entry date-only

1 settlement. It's that they couldn't get the specific dates
2 that you're talking about.
3 And you made another point that I think is
4 important, that Impax explicitly, in the course of
5 these negotiations, threatened to launch at risk,
6 right, and Endo wasn't willing to settle, but Impax did
7 make that explicit threat to Endo.
8 MR. HASSI: Any generic that wants to get a
9 settlement is going to make the other side believe
10 they're going to launch at risk. Absolutely. However,
11 the ALJ found they were not going to launch at risk,
12 and the record reflects that they were not going to
13 launch at risk.
14 And furthermore, counsel relies on the Nexium
15 case out of the First Circuit. And what the Nexium
16 case says, if you want to prove a launch at risk, you
17 also have to prove you're going to win the underlying
18 litigation. And that's what Impax' condition was here.
19 They would have considered a launch at risk had they
20 won in the district court --
21 COMMISSIONER PHILLIPS: On that note,
22 Counselor, Actavis says -- well, let me ask you, would
23 you agree with me that complaint counsel's account of
24 the harm described in Actavis is correct, in other
25 words, it's the elimination of this risk of

1 competition? Is that a fair statement?
2 MR. HASSI: I would agree that Actavis says
3 that. I would suggest to you that that was on a
4 motion to dismiss. We're here after a full trial
5 and -- and what you're struggling with is because that
6 doesn't work under the rule of reason.
7 In other words, that's this theoretical harm.
8 And it doesn't show harm to consumers. That's what
9 these cases are about, is harm to consumers. And it's
10 not --
11 COMMISSIONER PHILLIPS: Well, correct me if I'm
12 wrong. We're into the rule of reason because of how
13 the court viewed that harm.
14 MR. HASSI: Absolutely. Yes.
15 COMMISSIONER PHILLIPS: So if that's right,
16 what difference does the fact that they were or they
17 weren't or they probably were or they probably weren't
18 going to launch at risk -- what difference does that
19 make if the harm is this elimination of the risk of
20 competition?
21 MR. HASSI: So respectfully, if you look back
22 at the Commission's complaint, what the Commission
23 said, under harm, they talked about harm to consumers.
24 And in paragraph 95, what the Commission said is that
25 but for the large payment Impax would have launched

1 before January 2013.

2 In other words, there has to be some evidence

3 of a but-for world. There has to be some evidence that

4 you're balancing consumers were harmed because but for

5 this payment they would have launched earlier against

6 the benefits that Impax got in this settlement

7 agreement in the real world.

8 This risk of -- this risk of harm to

9 competition -- look at it from Impax' perspective.

10 Impax weighed those risks. It made a business

11 judgment when it got to the settlement table. It

12 knew, number one, it was not going to launch at risk.

13 It knew, number two, that it was litigating a case

14 with Endo and it was losing. As our expert --

15 CHAIRMAN SIMONS: You said Impax knew it was

16 not going to launch at risk?

17 MR. HASSI: Impax was in a position to address

18 those risks. They'd never launched at risk. And they

19 weren't going to launch at risk. And the CEO -- and

20 this is in the CEO's documents -- wasn't going to

21 consider it until they won at the district court

22 level.

23 CHAIRMAN SIMONS: But that's still launching at

24 risk.

25 MR. HASSI: It is still launching at risk.

1 COMMISSIONER SLAUGHTER: And Endo -- did Endo
2 know any of that?
3 MR. HASSI: No. Endo did not know that. But
4 again, we're talking Impax is the respondent here.
5 Impax was evaluating those things when it sat
6 across the table from Endo, because losing the
7 litigation -- it had lost the Markman hearing across
8 the board. It was losing the litigation. The
9 litigation might well have taken -- to reverse the
10 district court, go up to the Federal Circuit, come back
11 down, that could take past January 2013.
12 They knew Endo was acquiring additional
13 patents. They're trying to get in the market as early
14 as they can. And they decided on a settlement that
15 got them in before the patents expired. It got them a
16 license not just to those patents but to the
17 after-acquired patents. It got them freedom to operate
18 that has them in the market today when no one else is
19 in the market today.
20 COMMISSIONER CHOPRA: But doesn't intent
21 matter here? Didn't they perceive the risk of
22 competition that they were eliminating and managing now
23 that they for their own future cash flows were able to
24 get more certainty of it?
25 MR. HASSI: I don't think the record reflects

1 what Endo was thinking. I also don't think that Impax
2 should be judged based on Endo's subjective intent.
3 COMMISSIONER SLAUGHTER: But does that mean
4 that the legality of the deal is different with respect
5 to Impax and with respect to Endo?
6 MR. HASSI: No. Respectfully, the legality of
7 the deal should depend on the effects of the settlement
8 agreement, was it procompetitive or was it
9 anticompetitive.
10 COMMISSIONER WILSON: So, Counsel, can you
11 share with me the best case that you can point to in
12 which a court or the Commission got all the way to the
13 balancing step in the rule of reason analysis and
14 considered benefits that were not foreseeable at the
15 time of signing but that actually happened
16 subsequently?
17 And let me just add the factual backdrop here.
18 I think the record demonstrates that Impax
19 foresaw that there would be an attempt to product-hop
20 and that it was likely that Endo would not keep on the
21 market the original Opana ER, and so it was I think
22 foreseeable to Impax at the time of signing that there
23 would be no brand and potentially no generics because
24 it knew that additional patents were being added.
25 I don't know that Impax knew that the

1 reformulated Opana ER would need to be withdrawn from
2 the market at the FDA's insistence, but, obviously,
3 there are benefits flowing from having Opana ER
4 as a generic on the market, particularly since the
5 other version was pulled. So is there a case that
6 supports capturing those benefits as well as the ones
7 that Impax envisioned at signing when we get to the
8 balancing step?
9 MR. HASSI: I think courts and this Commission
10 take into account future benefits all the time. You
11 certainly do it when you evaluate mergers.
12 I also can't cite you to a case where this
13 Commission or any court ignored the real world and
14 said let's not pay attention to what effects the
15 agreement had in the real world and let's just look at
16 the time the agreement was signed.
17 Indeed, if you look at your guidelines for
18 collaboration with competitors, they say quite the
19 opposite. They follow the Chicago Board of Trade
20 language, which says, you look at -- if you have actual
21 effects in the market, you look at those effects and
22 you take them into account in balancing under the rule
23 of reason. And you should do that here.
24 CHAIRMAN SIMONS: So let's do that here for a
25 second and just follow this all through.

1 So what I'm interested in hearing your view on,
2 what is the but-for world here if -- so we have a
3 situation, as the ALJ tells us, where the freedom to
4 operate, according to him, results in a situation
5 where there's one competitor, right, which is just
6 Impax.
7 And in the but-for world if no settlement had
8 been reached, what would the but-for world have looked
9 like? Just one competitor; right?
10 MR. HASSI: I'm sorry. One competitor to
11 Endo?
12 CHAIRMAN SIMONS: No. One competitor selling
13 Opana ER.
14 MR. HASSI: If Impax had not settled, yes,
15 Endo would be the only -- would be the only party
16 selling Opana ER. But, respectfully, the but-for world
17 is in the province of -- we have the real world. We
18 have an agreement.
19 CHAIRMAN SIMONS: And so the real world
20 resulted in one competitor, and the but-for world would
21 have resulted in one competitor.
22 MR. HASSI: But for a period of five years,
23 from 2013 until the summer of 2017, Impax and Endo were
24 both competing. And respectfully, this is the
25 long-acting opioid market, so there are lots of

1 other -- there were lots of other competitors out
2 there. But there were two parties selling Opana ER
3 from January 1, 2013 until the fall of 2017, the summer
4 of 2017, when Endo withdrew its product.
5 Had Impax not settled, it would have been just
6 Endo during that period of time, and it's hard to say
7 whether Endo would have withdrawn from the market or
8 not.
9 COMMISSIONER CHOPRA: So you mentioned earlier
10 that you relied on Nexium, but doesn't Nexium say you
11 don't actually need any proof of delay?
12 MR. HASSI: Nexium accepted -- so Nexium was a
13 civil plaintiffs case where the FTC put in a brief,
14 and Nexium accepted some of the amicus arguments that
15 the FTC put before it.
16 But the Supreme Court, just this term, in the
17 American Express case, said the first step of the rule
18 of reason is to prove consumer harm. That's a
19 government case. That's the U.S. DOJ against
20 merchants. Now, at the time it went to the
21 Supreme Court, it was states. The DOJ had dropped
22 out.
23 But consumer harm is the hallmark of these
24 cases, and weighing -- balancing that consumer harm is
25 what you're supposed to be doing under the rule of

1 reason.

2 COMMISSIONER PHILLIPS: So, Counselor, a lot
3 of this, to me at least, seems to turn on a question
4 of harm from what. And complaint counsel is citing
5 Polygram and Hovenkamp and NCAA for the proposition
6 that we're looking at what flows, harm and benefit,
7 from the restraint, and you're saying from the
8 agreement.

9 Are they misreading the precedent? I mean...

10 MR. HASSI: I think they are. Yes, sir. I
11 think they are entirely missing the doctrine of
12 ancillary restraints.

13 So the doctrine of ancillary restraints says,
14 if the restraint is not required to achieve the
15 procompetitive efficiencies, then we look at it alone.

16 So NCAA, that case, they put caps on how many
17 games could be televised. That was a naked restraint.
18 If you look at Hovenkamp, he says that, a naked
19 restraint case -- in fact, the Supreme Court said it in
20 Cal Dental -- NCAA, naked restraint case, you look just
21 at the restraint.

22 If, however, it's not a naked restraint, if it
23 is ancillary to the procompetitive purposes of the
24 overarching agreement, you look at the benefits to the
25 overarching agreement. And if you look at that --

1 that's in your competitor collaboration guidelines.
2 And indeed, if you think I'm wrong about that, take a
3 look at one of your consents, for example, the one that
4 you just entered into two weeks ago, the Penn Gaming
5 consent.
6 You have in there a two-year noncompete, right,
7 under which you give the divesting parties this two
8 years' freedom from -- a no poaching agreement, that
9 says the merging parties can't take employees away from
10 the divestiture party for two years.
11 That restraint is naked on its -- is --
12 excuse me -- not naked, but if you look at it alone,
13 right, you can't justify that. If you look at it in
14 the context of the overall consent, the overall
15 decision and order, what you're trying to do, it's
16 procompetitive because you're doing something
17 procompetitive. You don't balance just the restraint,
18 just the benefits from that restraint, unless it's
19 naked.
20 COMMISSIONER SLAUGHTER: Can you apply that
21 to -- yes, I was going to say apply that to here.
22 MR. HASSI: So here, we've been talking about
23 the restraint as though it's the payment. The payment
24 doesn't restrain anything. The restraint here,
25 according to complaint counsel, is the fact that Impax

1 couldn't enter until January 1, 2013.
2 Now, importantly, even if -- if they hadn't
3 settled, there would have been valid patents that
4 extended past January 1, 2013.
5 So when you asked the question earlier,
6 Commissioner Phillips, about whether it would be legal
7 to enter in June of 2010, was it legal from an FDA
8 standpoint? Yes. Were there a couple patents that
9 prevented Impax from entering? Yes. Was Impax in
10 litigation in front of a federal court with respect to
11 those patents? Yes. If Impax had launched, how fast
12 would they have been taken off the market by a judge?
13 Like that (indicating). And they knew that.
14 But if you -- if you look at the overall --
15 the -- excuse me -- the overall scope, this agreement
16 was procompetitive and the settlement terms --
17 excuse me -- the payment terms are part of the
18 settlement. They're section 4.1(c) and 4.3. They're
19 not in the same section of the settlement agreement
20 even of the entry date.
21 So the January 1, 2013 entry date, that
22 appears in the definitions section and it appears in
23 section 3, which is the license section, which, by the
24 way, also has the broad license. There's a --
25 separately, there's a covenant not to sue. You have to

1 take all of those together because that's what --
2 that's what Impax was negotiating for.
3 In fact, complaint counsel, they want to throw
4 in the ten million that's from an entirely other
5 agreement and they want to say that's in this, too. In
6 fact, that has no --
7 COMMISSIONER PHILLIPS: In fairness to
8 complaint counsel, part of their argument was that
9 the no-AG commitment, the Endo credit -- leave aside
10 the DCA because that depends on other facts -- the
11 licenses both within the scope of the patent and then
12 the freedom to operate, all of these flow in the same
13 direction.
14 And so the question is logically, how do you
15 have to tie them together if from the perspective of
16 the other side it would have been better to give you
17 less? Right?
18 Why are they so intimately tied together if it
19 would seem that from Endo's perspective to drop one
20 would leave Endo in a better position?
21 MR. HASSI: I apologize. I'm not sure I
22 follow your question. I think they're tied together
23 because they're involved in the same agreement that the
24 parties reached following a negotiation.
25 Am I answering your question?

1 COMMISSIONER PHILLIPS: So complaint counsel --
2 I'm not going to quote directly, but they have a line
3 or a couple of lines in their brief that as a matter of
4 logic, right, if they would take a deal where they paid
5 you, they would take a deal where they didn't pay
6 you --
7 MR. HASSI: I see.
8 COMMISSIONER PHILLIPS: -- the same agreement
9 in the same direction as the license. And so common sense tells you that
10 there's something else available out there.
11 MR. HASSI: Well, respectfully, we're here after a trial.
12 The time for using common sense, for making inferences
13 is past. The time for evidence is here.
14 Indeed, if you could make those kinds of
15 inferences from a payment, you'd have a quick look,
16 wouldn't you?
17 And that's what the FTC asked for in the
18 Actavis case. When the FTC went up before the
19 Supreme Court in Actavis, they said, we think there
20 should be a presumption, we think there should be a
21 presumption that there's a payment flowing from the
22 brand to the generic, there should be a presumption
23 that that's anticompetitive, and then let the
24 respondents sort that out.

1 And Justice Breyer said no, you prove your
2 case as in other rule of reason cases.
3 And indeed, Justice Breyer, mind you, is the
4 person in Cal Dental who wrote the dissent.
5 Justice Breyer would have given a quick look in
6 Cal Dental. And in that case, like in this one, the
7 Supreme Court said, you can't do it based on a
8 theoretical harm, you've got to show actual harm.
9 In Cal Dental, the FTC chose not to put on
10 evidence of actual harm, they wanted a quick look, and
11 Justice Breyer didn't give them a quick look, just as
12 here -- excuse me. Justice Breyer would have given
13 them a quick look. The majority did not. But here,
14 Justice Breyer looked at it and said you don't get a
15 quick look. You've got to prove your case as in other
16 rule of reason cases. You've got to balance whether
17 they're anticompetitive --
18 COMMISSIONER SLAUGHTER: So can I --
19 COMMISSIONER CHOPRA: Let's say we buy this.
20 What if -- let's move the logic forward then on less
21 restrictive alternatives, so Commissioner Phillips seemed
22 to intimate this.
23 When we look at viability, in your mind, what
24 are the factors we should consider in what's viable?
25 Should we look at the possible, the probable, what

1 could have been put off the table? How should we
2 think about this? Or should we just think nothing is
3 viable?
4 MR. HASSI: And so I think less restrictive
5 alternative is interesting in the sense that
6 complaint counsel didn't touch less restrictive
7 alternative, not during the trial, not until their
8 post-trial reply brief did they come up with this sort
9 of a common sense argument.
10 Less restrictive alternative is also a subject
11 of evidence. The Supreme Court has said that, and
12 perhaps the best example of that is the O'Bannon case
13 out of the Ninth Circuit.
14 In O'Bannon, the plaintiffs came up with two
15 less restrictive alternatives. The Ninth Circuit
16 looked at them and upheld one and struck down one. And
17 the reason they struck down one of the two is that
18 there wasn't enough evidence.
19 Here, there's no evidence, none, on a less
20 restrictive alternative.
21 They put two experts on the stand.
22 Roger Noll from Stanford University, he said,
23 Don't have to do that, I don't have it.
24 They brought Max Bazerman down from Harvard,
25 professor of negotiations, wrote the book on

1 negotiations, literally. He said, I don't have an
2 alternative settlement here.
3 And so to come forward now and to say, There's
4 a less restrictive alternative, here it is, we put it
5 in our post-trial reply brief, without so much as a
6 shred of evidence? There's no basis for that.
7 COMMISSIONER CHOPRA: So the back-and-forth on
8 the negotiation, the material facts related to the --
9 let's call it the side agreement -- we can't consider
10 any of that?
11 MR. HASSI: So, interestingly, the -- if what
12 you're referring to as the side agreement is what they
13 refer to as the side agreement, the DCA, development
14 and co-promotion agreement, the facts are
15 overwhelmingly in favor of Impax on that. There is no
16 evidence that that was a payment.
17 I mean, I'll grant you, it was the only money
18 that changed hands as of the time of -- as of the time
19 of settlement. It was a separate agreement. It was
20 negotiated by separate individuals.
21 But most importantly, there's no evidence that
22 it wasn't an exchange of fair value for service. And
23 the ALJ devoted 38 pages to showing you why it's an
24 exchange of fair value for services. It's a drug that
25 Impax is still pursuing today.

1 COMMISSIONER CHOPRA: But let me ask you the
2 facts of -- oh, go ahead.
3 COMMISSIONER SLAUGHTER: Yeah. Because the
4 question I wanted to ask you before was about the side
5 agreement, too.
6 You had said just a second ago that we have to
7 look at all of the elements and benefits of the SLA,
8 the freedom-to-move license, in addition to the
9 restraints, because it's all part of one agreement and
10 they wouldn't have entered into it without it being
11 part of one agreement. But in almost the same
12 sentence you said but we shouldn't also then consider
13 the side agreement that was entered into at the same
14 time.
15 So my question for you is, isn't that a little
16 inconsistent, but also wouldn't that lead to --
17 wouldn't that set up a road map in the future for a
18 sort of structuring of transactions with moving pieces
19 into side agreements versus main agreements in order to
20 avoid potential liability that would be artificial in
21 some way?
22 MR. HASSI: So lots of parties have tried to
23 move lots of things in side agreements. I'm aware of
24 the basis for your concern there.
25 The reason I said that here goes back to a

1 problem with the way complaint counsel has structured
2 the rule of reason here.
3 The initial prong of the rule of reason, as
4 set out in Actavis, is a large and unjustified
5 payment. The Supreme Court said that a large and
6 unjustified payment brings with it the risk of
7 anticompetitive harm. And their prima facie burden is
8 to show there's a large and unjustified payment.
9 We proved and the ALJ accepted that the DCA is
10 not a large and unjustified payment, so my point is it
11 comes out at that stage. It's not part of their prima
12 facie case. It doesn't fall into the balancing of the
13 rule of reason because, on its own, that agreement can
14 be justified by the exchange of value, the
15 profit-sharing rights that were granted to Endo in
16 return for the opportunity to participate in the
17 marketing of IPX-203.
18 And so that's the first prong of the rule of
19 reason, is their prima facie case is to prove that
20 there was a large and unjustified payment.
21 I've been talking about the Endo credit, which
22 the ALJ found was a backstop to the no authorized
23 generic. Those he did find were payment terms.
24 COMMISSIONER SLAUGHTER: But the
25 freedom-to-move license was also not a large and

1 unjustified payment. I mean, we've been discussing
2 here that it was consideration, but not a large and
3 unjustified payment, so why is that consideration
4 something that's part of the analysis but not the DCA
5 consideration?
6 MR. HASSI: That's part of the procompetitive
7 benefits of the settlement agreement.
8 So the DCA is a separate document, a separate
9 agreement, and it falls out because the only reason
10 it's in this case is because there was a $10 million
11 payment associated with that, which they allege is
12 large and unjustified. If you find that that
13 $10 million is not large and unjustified, that entire
14 agreement can be set to the side.
15 I mean, if you want to consider it, you're
16 welcome to consider it. I would say it's on balance,
17 it's procompetitive. Impax has demonstrated that. But
18 it's, frankly, a distraction.
19 COMMISSIONER CHOPRA: And even if we don't --
20 even if it's not material, this DCA, I just want to ask
21 a few questions on the facts on this.
22 So who is this -- is this the right
23 pronunciation, "Dr. Cobuzzi"?
24 MR. HASSI: "Cobuzzi," yes.
25 COMMISSIONER CHOPRA: Who is that?

1 MR. HASSI: He was an employee of Endo. I
2 don't remember exactly --
3 COMMISSIONER CHOPRA: Okay.
4 MR. HASSI: -- what his title was.
5 COMMISSIONER CHOPRA: So it's possible that he
6 was head of business development?
7 MR. HASSI: I believe he was the person who
8 negotiated the DCA. Yes, he was a business
9 development --
10 COMMISSIONER CHOPRA: Okay. So you would
11 imagine that he'd be involved in all sorts of
12 licensing deals or speculative product deals; is that
13 right?
14 MR. HASSI: He was involved in a great deal of
15 business development, yes.
16 COMMISSIONER CHOPRA: Okay. So is it -- is
17 it -- he was looped in quite late in the process about
18 negotiating this, and the factual record shows that; is
19 that right?
20 MR. HASSI: The factual record shows that the
21 DCA was negotiated at a very time-compressed --
22 COMMISSIONER CHOPRA: Yes. In about two or
23 three weeks; is that right?
24 MR. HASSI: That sounds about right.
25 COMMISSIONER CHOPRA: And what's the typical

1 time when he negotiates deals that he completes those
2 deals? Has it been longer than two weeks?
3 MR. HASSI: I believe he sat on the stand
4 right here and said there is no typical time. He said
5 he's done them in shorter periods of time, but he's
6 certainly done them in longer periods of time.
7 COMMISSIONER CHOPRA: And is it right that the
8 $10 million was offered by Endo to Impax before there
9 was even basic market information about the drug in
10 development? Is that right?
11 MR. HASSI: I don't believe that's accurate, in
12 the following sense.
13 IPX-203 is a follow-on to another drug, IPX-66.
14 Endo initially wanted to license IPX-66 or perhaps both
15 of them. Impax never wanted to license IPX-66. They
16 were willing to negotiate IPX-203. They're in the same
17 family. One is a tweak on the other, so --
18 COMMISSIONER CHOPRA: And the payment structure
19 of it, so with speculative product deals, you know,
20 cash flows, they tend to materialize when certainty
21 increases, so isn't it strange that this agreement was
22 mostly front-loaded and not back-loaded where there was
23 more -- where most of the value came later?
24 MR. HASSI: Actually, most of the value did
25 come later here. The -- most of the payment --

1 COMMISSIONER CHOPRA: But it wasn't realized;
2 is that right?
3 MR. HASSI: They weren't realized, but most of
4 the payments that were built into that agreement were
5 only built in if Impax met certain milestones. Impax
6 has recently met those milestones but only after Endo
7 abandoned --
8 COMMISSIONER CHOPRA: So that's why you think
9 we should consider all of these future events, but in
10 this one we should not consider those future events?
11 MR. HASSI: Again, from my perspective, you
12 shouldn't consider the DCA because there's no large
13 and --
14 COMMISSIONER CHOPRA: Okay. And then the last
15 question on this, do you know how -- Impax, obviously,
16 gets audited financials.
17 MR. HASSI: Yes.
18 COMMISSIONER CHOPRA: And do you know how they
19 accounted for this $10 million payment? Was it an
20 extraordinary payment due to the settlement or was it
21 accounted for just like other product deals?
22 MR. HASSI: It was not. The one piece of
23 evidence that complaint counsel put in, they tried to
24 suggest that it was treated as a settlement. They put
25 that piece of paper in front of the CFO. He said,

1 Don't know what it is. He'd never seen it before.
2 That piece of paper is floating out there in the record
3 with, frankly, no evidentiary value.
4 COMMISSIONER CHOPRA: So do you know how it was
5 accounted for though it's not in the trial record?
6 MR. HASSI: The CFO may have testified at how
7 it was accounted for. My point is, is there was an
8 absolute -- there was -- there's something that
9 complaint counsel cites to that's a spreadsheet that
10 they found in a million pages of documents that they
11 couldn't tie to any witness that uses the word
12 "settlement" in connection with the $10 million.
13 I suspect that that's what you're referring to
14 in your question, and if you're not, I'm not sure. I'm
15 happy to get back to you on how this --
16 COMMISSIONER CHOPRA: Okay.
17 COMMISSIONER WILSON: Can I just take us
18 back --
19 MR. HASSI: -- I just don't remember.
20 COMMISSIONER WILSON: I'm sorry.
21 Can I just take us back to the less restrictive
22 alternative for a moment?
23 On page 14 of your brief, you argue that
24 Complaint Counsel's proffered less restrictive
25 alternative, a settlement that includes the broad

1 license but not a large and unjustified payment, quote,
2 "is no less restrictive of competition than the SLA."
3 And you stated, "Impax would still have launched its
4 product on the exact same date and given up its patent
5 challenge in the exact same manner."
6 Do you mean to suggest that no matter what
7 terms Endo offered, apparently even zero dollars, Impax
8 would only settle for the entry date that it actually
9 received?
10 MR. HASSI: No. I will say the record
11 reflects that was the only -- that was the earliest
12 date that Endo was willing to offer.
13 The point we were trying to make there is,
14 complaint counsel keeps suggesting that the payment is
15 the restraint. The payment is only a restraint if
16 it's tied to an entry date. And the entry date in the
17 less restrictive alternative is the same entry date as
18 the actual entry date in the settlement agreement.
19 It's not less restrictive, by definition.
20 Again, focusing on consumer harm, consumers get
21 generic product on January 1, 2013 under either
22 scenario.
23 COMMISSIONER PHILLIPS: Well, in fairness,
24 isn't that kind of where Actavis leaves us; right?
25 Actavis looks at the relation between the two, the date

1 and the payment, as a problem.
2 So how do we get out of -- how do we get to
3 your point that it's the date, not the payment, that is
4 the restraint?
5 MR. HASSI: I think if in this case if
6 complaint counsel had proved what the Commission set
7 out to prove, that in exchange for a payment -- had
8 there not been a payment, Impax would have launched
9 before January 1, 2013, it would be a very different
10 argument. You'd meet what Actavis was looking for.
11 CHAIRMAN SIMONS: Is that a necessary
12 requirement, that we prove that Actavis really -- that
13 the generic would have launched earlier?
14 MR. HASSI: I think you have to prove some
15 consumer harm, Mr. Chairman. I think you have to
16 prove that somehow in the but -- that there is a
17 but-for world in which consumers would be better off in
18 that but-for world than they are in the real world with
19 this settlement. That's the rule of reason test.
20 CHAIRMAN SIMONS: So it's not a probabilistic
21 thing? I mean, suppose that it reduced the risk of
22 competition by 10 percent. That's not enough?
23 MR. HASSI: Well, I like the probabilistic
24 theory. I'm not sure how you apply it. But again, if
25 you look at as of the date the settlement was signed,

1 I mean, that's essentially what Impax is doing.
2 They're saying, "probabilistically, how do we make the
3 most money for our shareholders, how do we get in this
4 market the soonest?" Right?
5 They weren't going to launch at risk. They
6 weren't going to win the litigation.
7 CHAIRMAN SIMONS: So basically -- I'm sorry.
8 Basically, they fooled Endo? Endo didn't really need
9 to pay this money?
10 MR. HASSI: In every negotiation, there's an
11 element of bluffing, there's an element of getting the
12 best you can.
13 Whether Endo needed to -- Endo didn't pay any
14 money. I mean, let's be clear. The payment terms
15 here were conditional. And as to the no-AG, they were
16 only going to launch an authorized generic if Impax
17 launched at risk. Impax was never going to launch at
18 risk. It was the sleeves off their vest.
19 COMMISSIONER SLAUGHTER: But Endo did pay
20 $102 million; right?
21 MR. HASSI: Endo did pay $102 million.
22 COMMISSIONER SLAUGHTER: So it's not accurate
23 to say Endo didn't pay any money?
24 MR. HASSI: Yes.
25 And respectfully, to go back to a point

1 Mr. Loughlin made earlier, he talked about their
2 interests being aligned. And as to the Endo credit, I
3 don't agree with that at all.
4 The genesis of the Endo credit was Impax was
5 concerned that Endo might engage in a product hop,
6 that Endo might move the market away from them. Impax
7 asked for a market acceleration trigger, something
8 that, again, would benefit Impax, would benefit
9 consumers, would get them in earlier. Endo refused.
10 And Impax said, "Well, you know, maybe we're at
11 loggerheads. We're concerned here. You're going to
12 move the market." And Endo said, "We'll tell you --
13 we'll give you -- you know, we'll create a
14 disincentive to move the market. We'll pay you if we
15 move the market away, because we're going to grow this
16 market."
17 And they made us put in a royalty. And the
18 royalty would have grown if they had grown the market.
19 And the Endo credit grew if they shrank the market.
20 So our incentives were not aligned with Endo's
21 on that at all. I don't know how you make the --
22 COMMISSIONER CHOPRA: On the bluffing piece,
23 so if there's flow of value, are you trying to --
24 isn't a reasonable market metric Endo's perception of
25 your entry?

1 I mean, there's also a series of facts in the
2 public domain about potential entry, the filing of
3 certain applications, among others, so isn't that our
4 best piece of evidence of the probability?
5 Rather than what -- rather than Impax's own
6 perception of what the probability was.
7 MR. HASSI: Well, again, complaint counsel
8 talks about the risk of competition. Impax is that
9 risk. Who better to evaluate that risk?
10 I mean, Endo has a perception of Impax's risk,
11 but it could be bluffing. It could be real. Impax
12 knows what it is.
13 I mean, in Delaware, they have something
14 called the business judgment rule. And we trust
15 executives to get the best deal for their companies.
16 That's what Impax did here.
17 Could there have been a more procompetitive
18 deal? Maybe. Could there have been a deal that was
19 better for Impax and consumers? Maybe. Impax did the
20 best it could, and Impax got the earliest entry date it
21 could.
22 COMMISSIONER WILSON: So does Impax normally
23 launch at risk after taking all of the steps that it
24 took here?
25 MR. HASSI: Impax had at that point in time

1 never launched at risk. And as the record reflects,
2 they always take the steps they took here.
3 In other words, it's -- and they're a prudent
4 company that says, six months out from when we think
5 we're going to get approval, we're going to start
6 doing these things. That way, if something happens,
7 we get to come to market. We're ready to come to
8 market.
9 They also always go to their board. They
10 didn't go to their board here. They -- this is a --
11 this would have been a bet-the-company risk for them.
12 They weren't going to bet this company.
13 COMMISSIONER WILSON: Do you have a sense for
14 how frequently Impax pursues P-III versus P-IV filings
15 for its ANDAs?
16 MR. HASSI: I don't. I know of other P-IV
17 filings they've pursued, but I don't know whether
18 they've pursued P-IIIs. And I can get that
19 information, but I don't know the answer to that.
20 COMMISSIONER WILSON: And particularly, within
21 the context of an opportunity to be the first to file.
22 MR. HASSI: I can look at that. I mean, I
23 don't know the answer to that.
24 One of the other areas that we haven't talked
25 about but I think is important here is market power,

1 because the ALJ's opinion has about two pages on it. I
2 don't think either side agrees with that approach.
3 But the market power approach that
4 complaint counsel has pursued here would essentially
5 make every brand-generic pair a market. They
6 basically say that the generic, which is a copy of the
7 brand, as you know, has a price effect on the brand
8 because of that unique relationship, and therefore, you
9 should look at those two as a market.
10 And literally, their expert, Professor Noll,
11 eyeballed a bunch of charts, literally -- he didn't do
12 any econometrics. He just looked at charts that were
13 prepared for him by the FTC and said, "I see the effect
14 on prices or I don't see an effect on prices, and I see
15 an effect when the generic Opana ER comes in here, I
16 don't see an effect when other long-acting opioids --
17 and that's the market here -- come into the market."
18 And so --
19 COMMISSIONER SLAUGHTER: But, Counselor,
20 doesn't it matter, both in thinking about consumer
21 choice and the substitutability of products, consumers
22 as patients don't usually have a choice about which
23 drug, which brand or generic version of the brand --
24 they usually have a choice between the brand and the
25 generic maybe at the pharmacy? But at the moment the

1 prescription is issued, they take what their doctor
2 prescribes them, which is not any long-acting opioid,
3 it is Opana ER or a generic equivalent; right? Isn't
4 that correct?
5 MR. HASSI: Well, prescribers have a choice and
6 consumers have a choice. It's not uncommon --
7 COMMISSIONER SLAUGHTER: But the price
8 incentive for consumers and prescribers is not the
9 same. The prescribers are not paying.
10 MR. HASSI: The prescribers are not paying.
11 What you heard in this case from the experts is that
12 prescribers take into account what the consumers are
13 paying. It's not the only thing they take into
14 account, but they do take it into account.
15 You also heard the experts -- I believe both of
16 them testified that there are people -- there are
17 consumers that come to them with a particular drug in
18 mind. There are also -- and in this case, both of them
19 agreed, they sometimes have to switch patients from one
20 to the other. Some long-acting opioids -- everyone is
21 different. Some people react differently to one
22 long-acting opioid rather than the other, and so they
23 switch patients. They also --
24 COMMISSIONER CHOPRA: Isn't that therapeutic
25 reason exactly why that there is not -- there's not

1 cross-elasticity, is that one product works for some
2 patients versus other products within that class of
3 drugs works for some other patients, so it's not --
4 does the patient get multiple prescriptions, and
5 you know, you pick the one that feels best for you, or
6 is it one at a time?
7 MR. HASSI: It is one at a time. But the
8 experts agreed there's no basis for identifying that
9 patient beforehand, so you can't price discriminate and
10 say, “Aha, I've got this cohort of patients that can
11 only use Opana, I'm going to charge them more.”
12 What they do is prescribe OxyContin because
13 that's what the doctor is familiar with. If OxyContin
14 doesn't work, they might try Opana.
15 We had a natural experiment we put into
16 evidence here. It's the UPMC study.
17 So UPMC had a formulary, and OxyContin was on a
18 favored tier in the formulary, and they moved it to an
19 unfavored tier and they watched what happened. And the
20 majority of patients moved away from OxyContin, some of
21 them to Opana, others to long-acting opioids.
22 That's cross-elasticity. That's patients
23 moving because of a financial incentive.
24 COMMISSIONER PHILLIPS: Are there precedents in
25 the pharmaceutical drug context that show us a broader

1 way to look at the market here?

2 MR. HASSI: I think the Doryx case in the

3 Third Circuit is one example, one example of such a

4 precedent. Yes.

5 COMMISSIONER WILSON: Do we need to define a

6 relevant market or would it be sufficient for

7 complaint counsel to demonstrate in fact that the

8 brand and the generic are very close in terms of

9 substitutability and that there is a significant demand

10 impact when the generic enters? In other words, can we

11 look at that direct evidence as opposed to defining a

12 market?

13 MR. HASSI: Respectfully, I think you need to

14 define a market here.

15 I mean, that price difference -- so I'll use an

16 example I used at trial. I eat Cheerios very often in

17 the morning. And I go to the supermarket, and there

18 are Cheerios and there's the store brand Oatios. And

19 the store brand Oatios do not sell for the same price

20 as the Cheerios, because nobody would buy them. And no

21 offense to the ShopRites of the world, right, we're

22 going to buy the General Mills Cheerios.

23 There's a price differential there. There has

24 to be because it's a copy. That does not mean that

25 Cheerios and Oatios are a market unto themselves and

1 that the Frosted Flakes and the Corn Flakes and
2 everything else in that aisle, Raisin Bran and all the
3 other cereals in that aisle -- pick your poison -- that
4 they're not all in the same market.
5 And so, respectfully, this eyeballing and -- so
6 yes. Is there a unique relationship between a brand
7 and a generic? There is. And that has to do with our
8 laws and substitutability at the pharmacy. And that
9 does not mean that it's a market unto itself.
10 If it were, if it were, first, every brand and
11 generic would be a market unto itself, and so, for
12 example, the Third Circuit would have gotten it wrong
13 in Doryx. And secondly, that's just one step removed
14 from the per se case they want. They want to say “prove
15 a payment, assume market power because it's a brand and
16 generic, and we're done here.” That's it. That's
17 per se.
18 COMMISSIONER WILSON: That's just actually step
19 one I think, right, and then we get to offering a
20 justification and --
21 MR. HASSI: On -- we'd like to limit that
22 justification to --
23 CHAIRMAN SIMONS: Just on the market power,
24 just on the market definition, you've got a situation
25 where, when the generic enters, it takes a huge amount

1 of volume away from the brand and has virtually no
2 impact on any other branded drug. Doesn't that tell
3 you something?
4 MR. HASSI: It tells you that there are generic
5 substitution laws that require that to happen at the
6 pharmacy regardless of what the patient wants.
7 CHAIRMAN SIMONS: Can you point to any other
8 product where that could be the case and those two
9 products aren't in the market by themselves?
10 MR. HASSI: I'm not aware of any other
11 regulatory regime like the one that exists for generic
12 pharmaceuticals that causes that to happen. That's
13 not happening because of consumer choice. It's not
14 really happening because of price. It's happening
15 because --
16 COMMISSIONER SLAUGHTER: But does it matter --
17 CHAIRMAN SIMONS: I know it's weird, but that's
18 what we do for a living here, we take into account,
19 when we do the analysis in a particular market
20 definition, we take into account the relevant
21 regulatory environment, and this is just -- this just
22 happens to be the relevant, controlling regulatory
23 environment; isn't that right?
24 MR. HASSI: It is the relevant regulatory
25 environment, that's true, Mr. Chairman.

1 I'd like to -- complaint counsel didn't address
2 it. They've got time on rebuttal. I'd like to address
3 the remedy as I have a couple of minutes remaining.
4 And we briefed this, but I think there are a couple of
5 important points here.
6 Number one is, there's no basis for it.
7 There's no basis for remedy here. I mean, this
8 settlement was procompetitive, and it is procompetitive
9 today, and consumers are benefiting today just as they
10 started benefiting in --
11 CHAIRMAN SIMONS: If this case was very, very
12 quickly done before the other patents were decided in
13 court, would your analysis be different, or is it
14 really focused on the fact that we know how that came
15 out?
16 MR. HASSI: I'm sorry. I missed the last part
17 of what you said.
18 CHAIRMAN SIMONS: So if we were sitting here
19 today and it was -- I forget the date actually. Maybe
20 2013 -- and we're still in 2013, and so we don't know
21 what was going to happen with respect to those other
22 patents, would that -- does that change the way you
23 would look at this?
24 MR. HASSI: It wouldn't, because those other
25 patents had issued. Those other patents -- I mean,

1 number one, as of the time of settlement, Impax had a
2 broad patent license. The patent -- a license that
3 they gave it freedom to operate as against patents that
4 are coming down the pike. Three of the patents by
5 January 1, 2013 had issued, the Johnson Matthey patent
6 and the two patents --
7 CHAIRMAN SIMONS: But they hadn't been ruled
8 valid and infringed.
9 MR. HASSI: They had not been ruled valid, but
10 they were presumptively valid, and they're valid going
11 forward into 2018.
12 We're not relying on the fact -- should it
13 affect your judgment? Yes. You should take into
14 account the fact that the Federal Circuit and the
15 district courts have all upheld those patents. But
16 that's not the only thing.
17 If you want to talk probabilistically, that
18 broad license was a benefit that nobody else got, and
19 it was a benefit that gave them freedom to operate, and
20 it was among the many benefits. I mean, there's a
21 benefit to the fact that they got in before the
22 patents-in-suit expired, so no matter when you look at
23 it, this was a procompetitive settlement.
24 With respect to the remedy, number one, there's
25 no basis for a remedy here.

1 Number two, this is not -- there's no
2 cognizable danger of a recurrence here.
3 Complaint counsel hasn't attempted to show that
4 Impax has done this again, would do this again. The
5 only thing they cite in their papers is the Solodyn
6 case. Respectfully, that was a case that was
7 investigated by the FTC and it closed it, so that's not
8 a suggestion that they would do this again. The
9 settlement was, under the prevailing law at the time,
10 lawful. Recall that this was settled in 2010 when
11 courts at that point in time were thinking about the
12 scope of the patent. Actavis hadn't been decided yet.
13 But perhaps most importantly, the remedy
14 addresses a second agreement between Impax and Endo, a
15 2017 settlement, that was not the subject of any
16 investigation. It was not the subject of any expert
17 testimony.
18 They put the settlement in the record, and they
19 put it in front of you and they say “take a blue pencil
20 to it and remove some of Impax's rights with respect to
21 that agreement.” On the basis of what? Certainly not due
22 process, certainly not evidence. They simply want to
23 take Endo's -- excuse me -- Impax's rights and take them
24 away based on their look at that agreement and saying,
25 “We think this is anticompetitive, too,” or “we think it's

1 somehow fencing in."

2 It's not a reverse payment. It's a royalty

3 payment. And it shouldn't be addressed.

4 Unless you have any other questions, I cede my

5 three or four seconds.

6 MR. LOUGHLIN: I'd just like to make a few

7 points.

8 Mr. Hassi mentioned a number of times that the

9 restraint here was the payment. The payment is not the

10 restraint. The restraint is the payment in exchange

11 for a deferred entry date.

12 And what we -- that's what we have here. We

13 have a payment. The ALJ found a payment of at least

14 23 to 33 million dollars in exchange for the avoidance

15 of the risk of competition.

16 There's no evidence that that payment was for a

17 license to future patents. There's certainly no

18 evidence that Endo was going to pay Impax to take a

19 benefit. There's no evidence that Impax needed to be

20 paid to take a benefit, that initial license that

21 helped it.

22 And importantly, if we're going to have a rule

23 that says the parties can look at a license to future

24 patents included in an agreement that doesn't flow

25 from the challenged restraint, we're going to create a

1 huge hole in Actavis, because licenses to future
2 patents are common in the industry, and if parties can
3 simply point to a license to future patents in their
4 agreement that doesn't flow from the challenged
5 restraint and say the entire agreement is
6 procompetitive, then just about any reverse payment
7 agreement can be justified.
8 A naked cash payment could be justified on the
9 basis that the settlement overall includes a license
10 to future patents.
11 If that were the law under the rule of reason,
12 then Realcomp would have come out differently, NCAA
13 would have come out differently, and National Society
14 of Professional Engineers would have come out
15 differently.
16 COMMISSIONER SLAUGHTER: Doesn't that depend on
17 how you measure the magnitude or the value of that
18 benefit, right, like doesn't that analysis depend on
19 whether you measure the freedom-to-move license in the
20 value we know today that it had given the five years
21 Endo was on the market versus what the reasonable
22 expectation would have been for Impax at the time that
23 it was entered into?
24 MR. LOUGHLIN: No. Because that's essentially
25 a balancing analysis, but you don't get to that step

1 unless respondent can show that the license to future
2 patents flowed -- the benefit from that license to
3 future patents flowed from the challenged restraint.
4 Here, it didn't. There's nothing
5 procompetitive -- there's no procompetitive benefit
6 from the license to future patents that is stemming
7 from the restraint that --
8 COMMISSIONER PHILLIPS: Let's assume just for a
9 minute -- we've been having a version of this I think
10 back and forth for a while. Let's assume that we have
11 to count --
12 COMMISSIONER CHOPRA: The broad patent.
13 COMMISSIONER PHILLIPS: Thank you -- the broad
14 patent license. It's late in the day.
15 Can you still win?
16 MR. LOUGHLIN: Yes. Because, first, there's
17 no -- we have a showing -- there's a less restrictive
18 alternative here. It is plausible that the parties
19 could have settled without the payments and still
20 gotten the license to future patents.
21 Actavis itself identifies a license without
22 payments in it as a plausible way of settling. We
23 know from the Commission's reports on patent
24 settlements that parties are able to settle without
25 reverse payments all the time.

1 And here, a settlement without reverse
2 payments would have benefited Endo in the sense that
3 it wouldn't have had to make what turned out to be a
4 $102 million Endo credit payment. Impax we know would
5 have taken that deal because a license to future
6 patents benefited it. It didn't need to be paid to
7 accept that license.
8 So a license -- excuse me. A settlement
9 without payments, without reverse payments, was
10 absolutely plausible.
11 COMMISSIONER WILSON: Is there other evidence
12 in the record besides the Impax offer for a date and
13 simple settlement which Endo rejected? Is there any
14 evidence in the record of a less restrictive
15 alternative that both Endo and Impax would have found
16 acceptable?
17 Because I think we can hypothesize that Endo
18 might have been willing to forgo making payments, but
19 I'm not sure that Impax would have been satisfied with
20 a deal, with the exception of the one that it proposed and
21 that Endo rejected.
22 MR. LOUGHLIN: What the evidence shows is that
23 rather than agreeing to earlier entry, Endo, every time
24 that was offered, put money on the table and Impax
25 accepted it.

1 So there's -- it's not surprising that there
2 isn't more evidence of negotiations, for example, over
3 an alternative settlement, because that was quickly
4 rejected in favor of more money.
5 COMMISSIONER SLAUGHTER: So isn't the less
6 restrictive alternative then not the same deal but just
7 without the payment but the same deal without the
8 payment and with a slightly earlier entry date? Is
9 that the argument that you're making?
10 MR. LOUGHLIN: That is likely the effect, but
11 even a settlement with the same entry date and no-AG
12 provision would benefit consumers, because the no-AG
13 provision ensured that when Impax came on the market,
14 it came on the market with a higher generic price
15 because it wasn't getting competed against by Endo, and
16 so that harmed consumers.
17 Consumers are better off even if there was the
18 same entry date. Now, that's not likely. The
19 payment -- the logic of the payment is that Endo was
20 paying not to accelerate entry or get the same entry
21 date but to get a later entry date. But certainly,
22 even under your hypothetical, a less restrictive
23 alternative here is a settlement without payments in
24 it.
25 COMMISSIONER CHOPRA: But by that logic, don't

1 you -- if you prove your prima facie case that it was
2 large, unjustified, among other things, won't you then
3 always win with less restrictive alternative using that
4 logic?
5 You're essentially saying that there's a
6 theoretical less restrictive way to do it, and there
7 would always be a theoretical one when there's delay.
8 MR. LOUGHLIN: The issue is, generally, these
9 cases rise and fall not on the less restrictive
10 alternative test but on whether or not there's
11 anticompetitive harm or procompetitive justification
12 for that.
13 Now --
14 COMMISSIONER CHOPRA: But we --
15 MR. LOUGHLIN: -- when we get to less
16 restrictive alternative, it may be that there's
17 alternative settlements, but it also may be that there
18 may be some facts where there absolutely could not be
19 an alternative settlement. I don't know what those
20 would be.
21 Here, in this case, we do know that there were
22 discussions of an alternative settlement which were
23 rejected in favor of more payments. And we know that
24 the Supreme Court identified these kinds of no-payment
25 settlements as less restrictive alternatives in Actavis

1 itself.

2 COMMISSIONER PHILLIPS: Is that helpful for
3 you or is it hurtful? Because they sort of say, look,
4 they were rejected, they weren't an alternative, and
5 you're telling us they were on the table. Like what's
6 the level of proof you need to show something that was
7 available as an alternative?

8 MR. LOUGHLIN: Under the less restrictive
9 alternative test, we have to show that a less
10 restrictive alternative could have been reached. We
11 don't have to prove that it would have been reached.
12 And there are cases saying that it's unlikely that the
13 plaintiff is going to be able to show what would have
14 happened in alternative negotiations.

15 So under a standard where we have to show that
16 it could have happened, our burden is to show that it
17 was feasible.

18 Here, it clearly was feasible. As I mentioned,
19 a settlement without reverse payments would have been
20 good for Endo and it would have been good for Impax,
21 and it was on the table.

22 Now, just --

23 COMMISSIONER PHILLIPS: Sorry. One more
24 question, and this is related to that issue.

25 The Chairman asked a question of Impax about

1 how its but-for world looked.
2 How does your but-for world look?
3 MR. LOUGHLIN: Our but-for world is the world
4 before the settlement when there was a risk of
5 competition. In other words, but for this agreement,
6 there would be a risk of competition.
7 We don't know how that competition would have
8 played itself out, but antitrust law does not dictate
9 outcomes. Antitrust law protects competition so that
10 the market can dictate outcomes.
11 Here, we don't know what would have happened
12 had there not been a settlement. It could have been a
13 different settlement. It could have been further
14 litigation.
15 The point is, the but-for world here is the
16 situation where there was in fact a risk of
17 competition. That was ended through this reverse
18 payment agreement.
19 And that's the problem that Actavis talks
20 about. Actavis is talking about the payment being the
21 thing that corrupts that competitive process that the
22 antitrust laws are designed to prevent -- to protect.
23 Excuse me.
24 Now, I wanted to make one point about the DCA
25 agreement.

1 Commissioner Chopra, you asked questions about
2 accounting documents.
3 There are in fact documents in the record that
4 you were referring to, CX 2701, in which Impax' CEO --
5 this is a document created by Impax' CEO -- identified
6 the payments from the DCA as an Endo settlement
7 payment. That's CX 2701 at 004.
8 In addition, Endo created a memo, CX 1701-005,
9 where Endo attributed the benefit from the DCA as
10 adding significant topline revenue for Opana. It
11 wasn't benefiting -- it wasn't identifying a benefit
12 from a product that it was licensing. It was
13 attributing a benefit from the license agreement to
14 additional revenues from Opana.
15 That only occurs through the agreement on an
16 entry date, not the license, so that tells you what
17 this license was for.
18 CHAIRMAN SIMONS: Thank you, Mr. Loughlin. I'm
19 sorry to tell you you're out of time.
20 That concludes our oral argument in this matter.
21 I would like to thank each of the parties for
22 their presentations. I thought they were both excellent.
23 And we're adjourned.
24 (Whereupon, the foregoing oral argument was
25 concluded at 3:37 p.m.)

1 CERTIFICATE OF REPORTER

2

3

4 I, JOSETT F. WHALEN, do hereby certify that the
5 foregoing proceedings were taken by me in stenotype and
6 thereafter reduced to typewriting under my supervision;
7 that I am neither counsel for, related to, nor employed
8 by any of the parties to the action in which these
9 proceedings were taken; and further, that I am not a
10 relative or employee of any attorney or counsel
11 employed by the parties hereto, nor financially or
12 otherwise interested in the outcome of the action.

13
