

## Breach Notices Received by the FTC

The FTC's Health Breach Notification Rule requires vendors of personal health records and PHR related entities to notify the FTC if they experience a breach of security involving unsecured health information. For breaches involving the health information of 500 or more individuals, entities must notify the FTC as soon as possible, and in any case no later than ten business days after discovering the breach. Breaches involving the health information of fewer than 500 individuals may be reported in an annual submission that includes all breaches within the calendar year that fall within this category. The following breaches involving more than 500 individuals have been reported to the FTC.

---
