RE: 16 CFR Part 306; Automotive Fuel Ratings, Certification and Posting; Project No. R811005

To Whom It May Concern,

Please consider stepping back and consider the motivations for the decisions you are making about ethanol. Consider views and opinions of others who have many of the same desires that you have, but believe that there are better ways to about about reaching similar results. This can be very difficult and I respect you for the difficulty for considering others view, especially when you may have already nodded your head in accepting a position that further supports ethanol. But please, when you carefully study other alternatives by very intelligent people who want most everything you want also, you may find in your heart that it's totally OK to adjust your decision with new information. Please step back and reconsider. Please study and a different perspective that looks at the even bigger picture of the ethanol issue. I personally have seen the damaging effects of ethanol fuel on small engines...my guess is that you truly want to know the truth too. Thank you for your kind consideration.

Sincerely,
Rusty McKee, TN
