RE: 16 CFR Part 306; Automotive Fuel Ratings, Certification and Posting; Project No. R811005

To Whom It May Concern,

We have plenty of nat gas & oil there is no need to use human & animal edible plants to make alcohol to be used in motor vehicles and power plants. Five percent alcohol from non-edible sources in motor fuels is sufficient.

Using edible sources for alcohol is not efficient. It takes more energy to produce it than it yields and it wastes too much water in the process.

Let's use the gas & oil we have and work on renewable resources that are economical and sensible. If you have no food to eat then it is pointless to pour alcohol into your car.

Sincerely,  
frank zeman, IL
