RE: 16 CFR Part 306; Automotive Fuel Ratings, Certification and Posting; Project No. R811005

To Whom It May Concern,

There should be no blend of ethanol in fuel. As I recall, ethanol is a type of alcohol and alcohols have a very nasty habit of absorbing moisture. From what I have seen as a mechanic, all e10 does is absorb moisture and deteriorate rubber. This is much more evident in small engines that use carburetors. As a- auto mechanic, I see a lot of cars that come in misfiring due to water in the fuel.

E15 needs to be band and all ethanol blends should be removed

Sincerely,  
mike Esposito, NJ
